This Article is brought to you for free and open access by the Digital Commons - Information and Tools at DigitalCommons@University of Nebraska - Lincoln. It has been accepted for inclusion in Page Design Templates for MS Word and PDF Files by an authorized administrator of DigitalCommons@University of Nebraska - Lincoln.

If you expect your document to be printed out to be read on paper, then use this template/format.

It creates a two-page spread that looks like a xerox of a traditional scholarly journal article. The layout fits on a single screen (of 1024 x 768 pixels) at 75% magnification, with type that is marginally readable. The blank file and template both include design and typographic settings to accommodate common text elements: headings, subtitles, extracts, etc. The font is **Palatino Linotype**, set single-spaced. The basic text size is 11-point. It is a *serif* font, which suggests a more traditional approach or style than *sans serif*. The overall design is “left aligned” – all titles, subtitles, headings, etc. are lined up on the left margin. Paragraphs are justified, for easier reading; titles, headings, references, captions, and endnotes are not justified.

For documents to be read **onscreen**, see the templates for Onscreen Serif or Onscreen SansSerif. They use larger type sizes, and are more readable at 75% magnification.

The two files attached to this documents are:

Print Serif file.doc = a blank MS Word file with these page and type specifications already loaded. Enter (or paste) your text into this file and Save under a new name.

Print Serif template.dot = an MS Word template; store and use this to create a new blank document. Templates are generally stored in a folder in Program Files > Microsoft Office > Templates

What follows are sample pages and specifications for the type, margins, settings, etc.
