Implications of the Framework and NGSS for Instruction

Science instruction will involve less...

Rote memorization of facts and terminology

Learning ideas disconnected from questions about phenomena

Teachers providing information to the whole class

Teachers posing questions with only one right answer

Science instruction will involve more...

Learning facts and terminology as needed while developing explanations and designing solutions supported by evidence-based arguments and reasoning

Using systems thinking and modeling to explain phenomena and to provide a context for the ideas to be learned

Students conducting investigations, solving problems, and engaging in discussions with teachers' guidance

Students discussing open-ended questions that focus on the strength of the evidence used to generate claims.

Implications of the Framework and NGSS for Instruction

Science instruction will involve less...

Rote **memorization** of facts and terminology

Learning ideas **disconnected** from questions about phenomena

Teachers **providing information** to the whole class

Teachers posing questions with only **one right answer**

Science instruction will involve more...

Learning facts and **terminology as needed** while developing explanations and designing solutions supported by evidence-based arguments and reasoning

Using **systems thinking** and modeling to **explain phenomena** and to provide a context for the ideas to be learned

Students **conducting investigations, solving problems**, and engaging in discussions with teachers' guidance

Students discussing **open-ended** questions that focus on the strength of the evidence used to generate claims.

Implications of the Framework and NGSS for Instruction

Science instruction will involve less...

Students reading textbooks and answering questions at the end of the chapter.

Having preplanned outcomes for “cookbook” laboratories or hands-on activities.

Using worksheets

Oversimplifying activities for students who are perceived to have less capability in science and engineering.

Science instruction will involve more...

Students reading multiple sources, including science-related magazine and journal articles and web based resources; students developing summaries of information.

Conducting multiple investigations driven by student’s questions, with a range of possible outcomes that collectively lead to a deep understanding of established core scientific ideas.

Student's producing journals, reports, posters, and media presentations that explain and argue

Providing supports so that all students can engage in sophisticated science and engineering practices.

Implications of the Framework and NGSS for Instruction

Science instruction will involve less...

Students **reading textbooks and answering questions** at the end of the chapter.

Having preplanned outcomes for **“cookbook” laboratories** or hands-on activities.

Using **worksheets**

Three Dimensional Learning

You do this (**Practice**) to show you know that (**Core Idea**) and it is connected to that (**Crosscutting Concept**)

*Performance Expectations
in Next Generation Science
Standards*

Shift in Standards

Current: One Dimensional Learning

Standard 1

Distinguish between physical and chemical properties of matter as physical (i.e., density, melting point, boiling point) or chemical (i.e., reactivity, combustibility). **7.2.1a**

Standard 2

Use inquiry to design and carry out a behavioral scientific investigation. **7.3.4.a**

After: Three Dimensional Learning (NGSS)

Analyze and interpret data on the properties of substances before and after the substances interact to determine if a chemical reaction has occurred **MS-PS1-1**

Patterns (implicit in this standard)
