October 2005

Where's the Poop? Environmental Challenges for Large and Small Animal Feeding Operations

Richard K. Koelsch
University of Nebraska - Lincoln, rkoelsch1@unl.edu

John Lawrence
Iowa State University

From:

Heartland Regional Regional Water Coordination Initiative Conference

DoubleTree Hotel - Overland Park, KS

October 26 - 28, 2005

Online at: http://www.oznet.ksu.edu/waterquality/Reg_Conf/presentations.htm

Where's the Poop? Environmental Challenges for Large and Small Animal Feeding Operations

Rick Koelsch, University of Nebraska and
John Lawrence, Iowa State University

Applying knowledge to improve water quality

Where's the Poop?

- **Small AFO**
  - **Under 1000 AU**
  - **Below the NPDES permit size unless designated or direct contact or man-made discharge to water of US**
  - **May require state permit**
- **CAFO**
  - **1000 or more AU**
  - **Required to have NPDES permit**

Where's the Poop?
AFO or CAFO

- Which size has the more operations?
- Which size has more animals/poop?
- Which size has more recoverable nutrients?
- Which size has more acres available for manure?

Where's the Poop?
AFO or CAFO

- Who are your clients?
- What are their challenges?
- How do you reach them?
- Where is the greatest environmental risk?
- Where can you have the greatest impact?

Status and Trends in Small and Mid-Sized Animal Operations in the U.S.

Noel Gollehon

Economic Research Service, USDA

Presentation at the Workshop on Small and Mid-Sized Animal Operations and Water Quality

May 2, 2005

Linthicum Heights, Maryland

Numbers of farms, animals, & nutrients

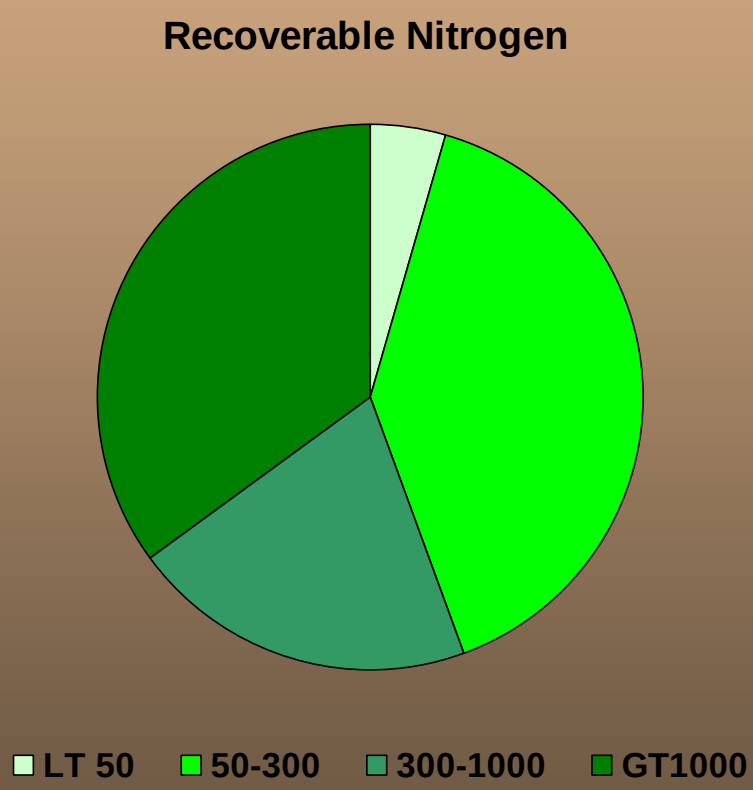
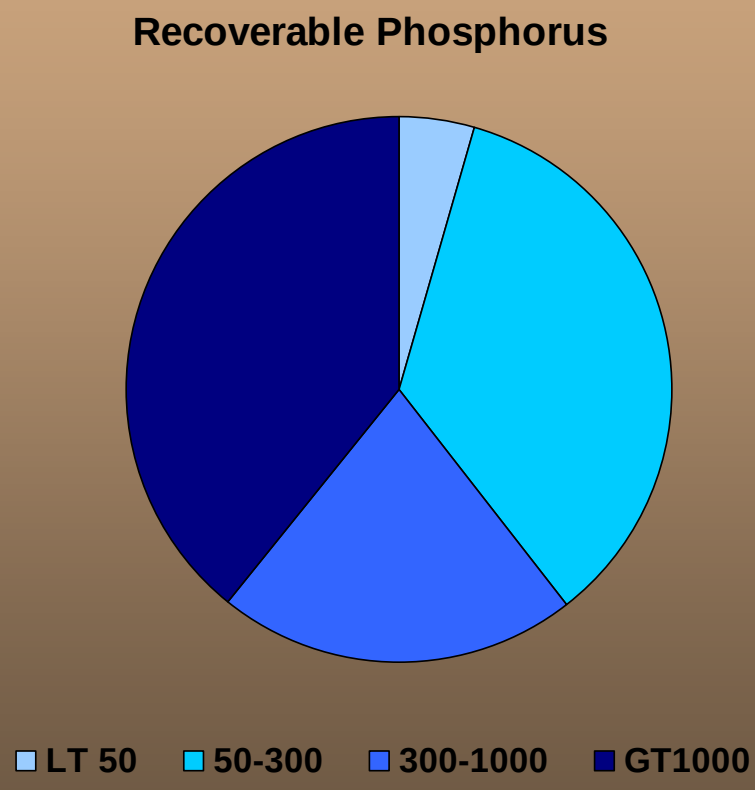
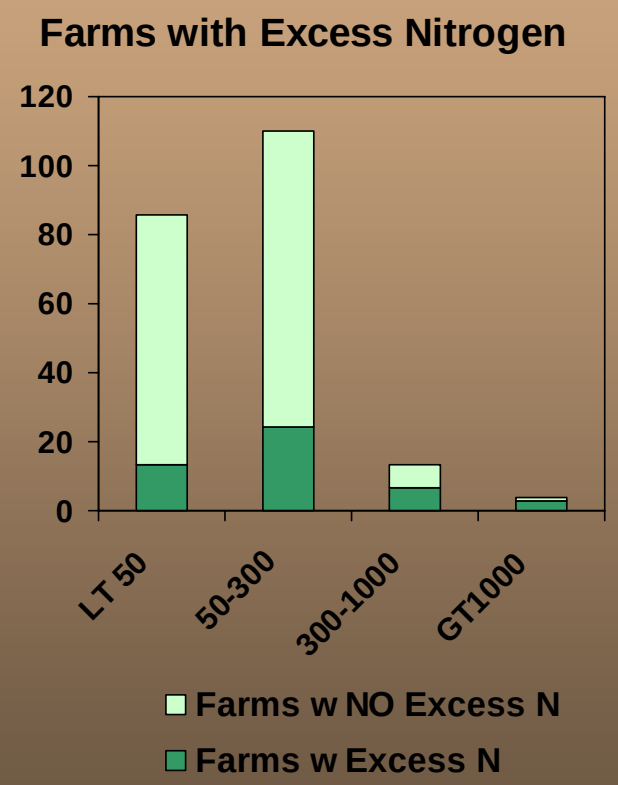
Confined animals: Manure nutrients

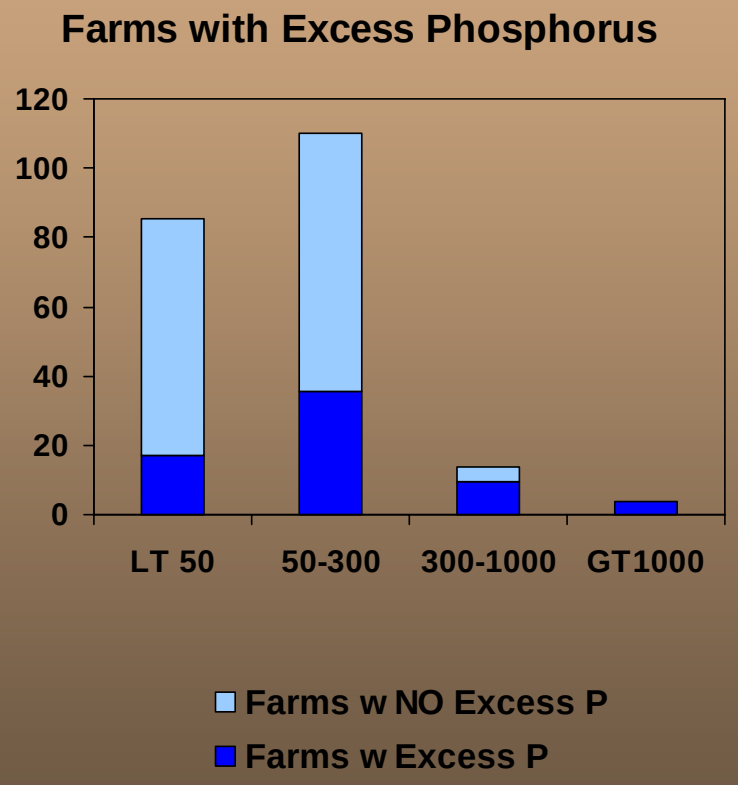




Source: Gollehon, *et al*., 2001

Confined animals: Farms with excess manure





Source: Gollehon, *et al*., 2001

AFO Challenges

- More than half of recoverable nutrients
- 98% of animal operations
  - Over 700,000 farms
  - 150,000 farms 300-1000 AU
- Largely under the radar
- Balancing carrots and sticks
  - Few sticks if unregulated
  - Cost-share carrots are costly to implement and discourage of some producers

AFO Take-home Points

- **Nutrient planning essential**
  - **AFO's with enough land need better utilization**
  - **AFO's with excess nutrients need to plan beyond the farm borders**
- **Educational programs important**
  - **Too many to regulate**
  - **Technical assistance programs costly**

Bang-for-the-Buck Programming

- Results in water quality improvement
- Not so detail as to discourage adoption
- The producer understands:
  - Greatest water quality risk factors
  - Nutrient value of manure
  - BMPs and simple strategies to address both
