## **Overview**

The ability of your business to generate and sustain product sales and services will determine net revenues and the profit you make. Unless you are the one in a thousand who has products or services that sell themselves – the generally unrealistic dream of every business owner – the level of sales and profits realized by your business will be directly related to your efforts to identify and respond to market opportunities.

Experience indicates that developing a marketing plan and identifying your sales goals are vitally important activities. Your marketing plan reflects your realistic assessment of the market potential of the products and services you want to sell. A typical marketing plan is based on data from census reports, trade sources, and reflects your decisions on the geographic area you intend to serve.

A marketing plan will focus on the strategy you will use to get your message to your target market (those with the purchasing power and unsatisfied needs that can be met with the product or service you plan to offer) and create more sales and profits. It will help you focus your marketing efforts and advertising dollars on the market segments where people are most likely to buy your products and services. It provides part of the basis for financial planning. A well-developed marketing plan with marketing goals that are both optimistic and realistic will help you secure needed credit from suppliers and lenders.

## **Preparing Your Marketing Plan**

The following worksheet focuses on a number of issues important in your marketing efforts. It is intended to be "user friendly," with a simple questionnaire style approach. However, it is important to assess the market – to do your market research – before starting to mark your responses to each of the issues. To complete a marketing plan, you need to learn: (1) who your target market is, (2) what that

market needs, (3) how your market prefers to buy, (4) how your product or service stands out in the crowd, and (5) the feasibility of marketing your product or service in a particular market segment.

Focus your information gathering based upon the issues addressed in this worksheet. Talk to people who may be your future customers. Ask about and record their interest in products and services like those you intend to sell. Try to determine if there is a niche for something of higher quality or of lesser quality that can be sold for a lower price. Learn everything you can about your customers and their spending habits. Write down all the information so you can refer to it later. Identify the competition and study the strengths and weaknesses of their businesses. Go to a library and look up population trends and the age distribution of the local population. The Chamber of Commerce in your area should also be able to provide additional statistics about your market. You can't know too much about your customers and markets.
