The Occurrence in Nebraska of *Vireo flavoviridis*.—A specimen of the Yellow-green Vireo, *Vireo flavoviridis*, shot at Long Pine, Brown County, has just been received by the Curator of the Museum of the University of Nebraska. This is the first one reported in this State. It is a rare Vireo for the entire United States having been reported, as far as the author can learn, from Texas, California, and Canada only.

The specimen was shot and donated by the Rev. J. M. Bates of Long Pine, who has already done a great deal to further the knowledge of our native birds.

This adds one more to Prof. Lawrence Bruner's List of Nebraska Birds, recently published by the Nebraska State Horticultural Society. The total number of species and sub-species for the State is now 418.—ERWIN H. BARBOUR, *University of Nebraska, Lincoln, Nebr.*
