Consequences Teach Responsibility

This NebGuide describes how to discipline children by letting them experience the consequences of their behavior, and by using "time-outs" and "reverse time-outs."

Herbert G. Lingren, Extension Family Life Specialist

- Take a Time-Out
- Reverse Time-Out
- The Future
- Some Responses To Misbehavior
- See How Much You Have Learned
- Practice Exercises

There are many ways to discipline children. Parents can choose ways that suit them as individuals and that fit their beliefs and values. Letting children suffer the consequences for their behavior is just one of many discipline methods.

Letting children suffer the consequences is a "hassle-free" way to discipline them. Children learn from experiences, just like adults. We call it "learning the hard way." The child learns that every act has a consequence. And, they learn to be responsible.

Parents can declare that the consequence of not coming to the dinner table on time to eat is that the child does not eat dinner that evening. Hunger is a natural consequence of not eating. If he complains, the parent can say, "I'm sorry you feel hungry now. It's too bad, but you'll have to wait for breakfast." The child who experiences the unpleasant consequences of behavior will not be likely to act that way again.

Parents should tell the child, before it happens, what the consequences are for breaking a rule. If the child knows the consequences of not getting to the dinner table in time to eat with the family, then the child has a choice--whether to get there in time and eat, or to be late and not eat. Children must understand that they have choices and must accept the consequences of their choices.

The child also needs to know the reason for the consequence; for example, it is extra work for parents to keep food warm and inconsiderate to expect someone to clean up the kitchen twice.

It is important, too, that parents be willing to accept the child's decision; that is, they must be willing to allow the child to go without dinner if the child chooses to miss the meal. Doing without one meal will not harm the child.
Natural consequences allow children to learn from the natural order of the world. For example, if the child doesn't eat, he will get hungry. If the child doesn't do homework, he will get a low grade. The parent allows unpleasant, but natural, consequences to happen when a child does not act in a desirable way.

Logical consequences are arranged by parents. The consequence must logically follow the child's behavior. For example, not having clean clothes to wear is a logical consequence of not placing dirty clothes in the hamper.

Consequences teach responsibility. Kristin left her dirty clothes on the floor and never placed them in the dirty clothes bag as requested. Nagging, scolding, and threatening did no good. Kristin continued to leave her dirty clothes on the floor.

Her mother decided to use logical consequences. She told Kristin, in a firm and friendly voice, that in the future she would wash only the clothes that were placed in the bag. After five days, Kristin had no clean clothes to wear to school, and she was very unhappy to have to wear dirty, rumpled clothes. After that, Kristin remembered to place her clothes in the bag.

Kristin's mother gave her the responsibility for placing her clothes in the proper place to be washed. If her mother had relented and washed Kristin's clothes when she had not placed them in the bag, she would have deprived her of an opportunity to learn to take responsibility for herself. If parents protect children from the consequences of their behavior, they will not change it.

Some parents would not be willing for their child to go to school in dirty, rumpled clothes. Only they can decide if they want to offer the child that particular consequence.

Using consequences can help a child develop a sense of responsibility. It leads to warmer relationships between parents and children and to fewer conflicts. The situation itself provides the lesson to the child.

Natural consequences cannot be used in all situations. Parents cannot use natural consequences if the health or safety of the child is involved. If a young child runs into the street without looking, it is not possible to wait until the child is hit by a car--a natural consequence--to teach the child not to run into the street. Instead, the child should be taken into the house and told, "Since you ran into the street without looking, you cannot play outside now. You can come out when you decide to look before going into the street."

This is a logical consequence. Because running into the street can harm the child, he cannot play outside until he learns to play safely in the yard. The child has a choice, to stay out of the street or to go inside. The child is given responsibility for behavior, and any consequences suffered (going inside) are the results of that behavior. However consequences cannot be used with very young children who do not understand about them. Remember, children's minds don't work like adults' and they can't think like adults.

Consequences are learning experiences. The purpose of using consequences is to help the child learn to make decisions and to be responsible. Consequences are learning experiences, not punishment. They won't work if they are used like punishment. For example, if a father yells angrily at his child, "Put up your toys or you can't watch TV," he is not encouraging the child to make a responsible decision. If he says calmly in a friendly voice, "Stuart, put your toys up, or you can't play with them for a week," he allows Stuart to make a choice. The secret of using consequences effectively is to stay calm and detached. Be friendly, not vengeful and spiteful.
Parents cannot apply consequences if they are angry. They cannot conceal their anger from the child--their voice will give them away. Try to view the situation objectively--as though the child were a neighbor's child and not your own--and administer the consequences in a firm and kindly manner. Remember that giving a child a choice and a chance to suffer the consequences is a learning process for the child.

The differences between consequences and punishment are:

<table>
<thead>
<tr>
<th>Consequences</th>
<th>Punishment</th>
</tr>
</thead>
<tbody>
<tr>
<td>calm tone of voice</td>
<td>angry tone of voice</td>
</tr>
<tr>
<td>friendly attitude</td>
<td>hostile attitude</td>
</tr>
<tr>
<td>willing to accept the child's decision</td>
<td>unwilling to give a choice</td>
</tr>
</tbody>
</table>

Consequences work when children are trying to get the parent's attention by misbehaving, and when they fight, dawdle, and fail to do their chores. They can be used to get children to school and meals on time, and to take responsibility for homework. Robert learns that if he doesn't wash his hands before meals, he won't be served any food; and if he fights with his brother while in the car, the car will be stopped until calm resumes.

- **Consequences are difficult to use.** It is not easy to use consequences as a way to discipline children. It is hard work to think of consequences that really are logical. And, it requires lots of patience! Sometimes it takes several weeks to get results.

Parents are so used to telling their children what to do that it is very difficult to sit back and let them suffer the consequences of their actions. The effort is well worth it, however, because it means fewer battles between parent and child.

**Take a Time-Out**

A "time-out" is an excellent discipline method to use when your kids are "bugging" you. It works like this. Sandra and Sarah are fighting over a game. Their mother says, "Since you can't play together without fighting, I think you need a time-out. Sarah, you go to your room, and Sandra, you go to the bathroom and stay for five minutes. I will let you know when five minutes are up." (They can be sent to any room where they can be alone.)

A time-out is not a punishment. It is just a boring five minutes when nothing happens.

- **Time-outs have many advantages.** They can be used with children aged three to twelve. (They probably won't work with children younger than three, and they are not appropriate for teenagers.)

Time-outs can be used with as many children as you have places where they can be alone.

A time-out can be used when children are fighting and quarreling, and when their behavior is annoying you.

Before trying this new method, sit down and explain it to your children when both you and they are in a happy frame of mind. It always helps if children know what to expect. For example, tell them, "The next time you argue over your toys, we are going to try something new. It's called a time-out. When I say 'take a time-out,' it means you have to go to separate rooms and stay there for five
minutes. I will tell you when five minutes are up."

- **Call time-outs in a calm, cool way.** It will not work if you make it a punishment or if you scream, "Roger, I've told you and Eddie a hundred times not to fight over your toys. You two will just have to take a time-out and see how you like that!

The objective of the time-out is to stop undesirable behavior. Roger and Eddie cannot fight when they are in separate rooms. The time-out gives them time to simmer down. It also gives them time to think about their behavior and to realize that you will not allow it to continue.

The time-out is particularly helpful for fighting and quarreling between brothers and sisters. Sometimes children fight to get attention. When the parent screams and punishes, the children get attention and thus have reason to repeat their fighting.

The time-out saves parents from trying to decide who started the fight and who is to blame. Placing blame on one child only creates more jealousy. When fighting breaks out, say, "Since you children cannot get along with each other, I think you need a time-out." If Bryan says, "But she started it," say, "I don't care who started it. You both need a time-out."

When five minutes are up, say, "Five minutes are up." Don't say, "You can come out of your room now," or "You can come out and play now," or give any kind of directions. Just let them know that the five minutes are up.

Calling a time-out instead of punishing makes for less tension between parent and child. If causes less wear and tear on the parent. If the time-out doesn't work, you are probably not using it correctly. Parents who have difficulty using this method are the ones who have trouble saying "no" to their children. If the child refuses to go to the room, simply take him by the hand, lead the way to the room, and close the door. The child needs to learn that you mean business, and when a time-out is called, he is going to a room and staying there for five minutes. If the child won't stay in the room, the parent is probably not calling the time-out in a firm manner.

The parent must mean it. If you call a time-out and then don't see that the child goes to a room, the technique will not work. The child soon learns that when you say, "Take a time-out," it will not be enforced.

The first time you try a time-out, your children will be surprised that you are not punishing them. After they are familiar with this discipline method, they will accept it and may even call time-out on themselves. This is a sign of self-discipline.

**Reverse Time-Out**

Reverse time-outs can be used when the child is really "bugging" you. Remove yourself from the situation. You may not be able to change his behavior, but you do not have to suffer through it. Instead of isolating the child, as in a time-out, it is the parent who is isolated.

If the child is acting silly, arguing, or whining, leave the child and go where the behavior can't get to you. For example, take a magazine, go in the bathroom, and lock the door. Don't come out until peace and calm are restored.

Some parents may not like this discipline method. It is inconvenient, and they interpret it as "giving in." However, your children consider your presence rewarding. When you remove your presence, you are
withholding a reward. Children soon learn that if they behave a certain way, you will leave the room.

The Future

Now that you have learned some helpful ways to discipline your children, you can face the future with confidence. You alone can choose the best way to discipline your child because you know your child better than anyone else. If you choose the discipline methods described in these lessons, you will be helping your child, and both you and your child will be happy about the results.

Remember, though, that misbehavior is a normal part of growing up. No child is good all of the time. However, if your child has severe behavior problems, such as repeated acts of violence, these discipline methods may not work, and you may need to look for professional help.

Some Responses To Misbehavior

1. Using consequences as a discipline method helps children learn to take responsibility for their behavior.
2. Consequences must be logically related to the misbehavior.
3. The child must see the relationship between misbehavior and the consequence, or it will not work.
4. The child must know that there is a choice when logical consequences are used.
5. Use consequences in a firm, kind, friendly manner.
6. Time-outs work well when your children quarrel and fight.
7. Call time-outs in a firm, calm voice.
8. Calling a time-out instead of punishing makes for a happier atmosphere in the home.
9. A reverse time-out means that the parents isolate themselves from the child instead of isolating the child.

Practice Exercises

1. Try calling a time-out when your children fight or argue this week. Notice:
(a) How did I feel?
(b) How did the children respond?

2. Try using logical consequences this week. Pick some behavior that doesn't get you "uptight." It is difficult to learn a new discipline method when you are upset.
   (a) What did the child do?
   (b) What consequences did you and the child decide on?
   (c) What happened? Did it work?

Initial development of this publication was done by Betsy Schenck, Extension Specialist. Child Development. Virginia State University and Elaine Wilson, Parenting Specialist, Oklahoma State University.

Answers to see how much you have learned:

1. Consequences
2. Consequences
3. Time-out
4. Reverse time-out
