Many Nebraska agricultural producers hire custom operators to perform machinery services for their farms and ranches across the state. The 2018 Nebraska Custom Rates Survey Report summarizes the current rates charged for specific machinery operations and other on farm or ranch custom services. Prices paid for these services become more critical as profit margins tighten because of lower commodity prices.

Findings from the survey are divided into two major sections. Part I includes spring and summer operations such as tillage, planting and harvesting of small grains. Part II includes information about fall and miscellaneous operations. Custom rate summaries in these sections include regional rates for the eight Nebraska Agricultural Statistics Districts and the overall state. A total of 151 custom rates on machinery operations and related services were reported as part of the 2018 survey with 227 survey participants providing information on the various rates. Custom rates reported include charges for the use of necessary equipment, fuel, labor and supplies, such as baling wire or twine, provided by the custom operator. Seed, fertilizer and chemical costs are not included.

Full summaries from this survey, including district as well as state data, are published as a University of Nebraska-Lincoln Extension Circular (EC) 823 and available online at agecon.unl.edu/custom-rates.

The following custom rates are a statewide summary of the most popular machinery operations from the 2018 survey. The information presented in this publication should be used only as a guide. Rates may change from year to year due to expense differences and local market forces.
