Enclosed is a check or money order for $________ made payable to Clarke-McNary forestry fund.

Signed____________________________ (Cooperator)

Approved_________________________ (County Agent)

Please type and send this order with check to:
Nebraska State Forester, East Campus.

In submitting this application, I understand the trees are for windbreak and forest planting only and are not to be grown for resale with roots attached, or planted as ornamentals.
1. What is a potted tree?
Seedling trees, as they come from the nursery beds, are placed in special potting soil and encased in 2"x2"x9" tar paper pots. Trees range in top height from 4 to 10 inches. Trees, after potting, are held in a shade house for one year before distribution to landowners.

2. Why use potted trees?
The survival rate can be increased by using potted seedlings since the root system within the pot is not disturbed or exposed during the planting process.

3. How are potted trees handled before planting?
Potted stock must be handled carefully before it is placed in the ground so as not to damage the pot or expose the root system. The pots and soil surrounding young trees are allowed to become fairly dry just before shipment to landowners—this is done to minimize breakage and soil disturbance. If trees are not to be planted soon after arrival on the farm, soil around the seedlings should be thoroughly moistened.

4. How should potted trees be planted?
Potted trees can be planted by machine or by hand. DO NOT REMOVE TAR PAPER FROM AROUND TREES BEFORE PLANTING.

For hand planting:
a. Dig a hole approximately 6 inches in diameter and 10 inches deep.
b. Place 1 inch of loose soil in bottom of hole. Place potted tree in hole in upright position. Fill hole one-half full of soil. Fill balance of hole with water and let drain away.
c. Fill hole with soil to top of tar paper pot, water again.

5. What care should be given the trees after planting?
Protect trees from wind damage by placing shingles, baled hay or straw, or similar barrier on north and west sides of seedling. Provide protection from rabbits by use of repellant or wire screens. Do not allow domestic livestock of chickens around the trees. Water the seedlings thoroughly as needed.

$8.00 per box of 30 trees—plus 20 cents State sales tax. Total—$8.20

Trees must be picked up at one of the following locations:
