2005 FALL SEED BOOK

The Nebraska Crop Improvement Association is dedicated to enhancing the economic viability and well-being of the people of Nebraska and the world, through value-added products and processes.

We will achieve this goal through an organizational structure which attracts the finest people, fully develops and challenges individual talents, encourages industry-wide collaboration to advance agriculture, and maintains the Association's historic principles of integrity.

OFFICERS

President (District 4)	Chris Cullan, Hemingford
Vice President (State-at-Large)	Mark Knobel, Fairbury
Treasurer (District 1)	Norm Rohlfing, Talmage

DIRECTORS

Joel Maschmann, Deshler	District 2
Von Johnson, Cambridge	District 3
Bruce Gerch, Waterloo	State-at-Large
Tom Luhrs, Enders	State-at-Large
Rick Velde, Hastings	Seed Trade Representative
L. Mark Lagrimini, Lincoln	Agronomy Representative
DeLynn Hay, Lincoln	IANR-UNL Representative

STAFF

Steve Knox	Secretary-Manager
Larry Prentice	Assistant Manager
Clint Koester	Field Services Supervisor
Donna Maul	Lab Services Supervisor
Diane Brestel	Administrative Assistant
Nadine Beethe	Clerk/Receptionist

The purpose of this directory is to provide crop producers, decision makers, and the seed industry with a reference to seed sources in Nebraska for:

This seed book includes those members whose fields were planted with eligible seed stocks and whose applications for field inspection were received by the publication date.

Inquiries about seed supplies and prices should be directed to the growers and/or seed enterprises listed, not to the Nebraska Crop Improvement Association.

1. Certified Quality Seeds

In no case is the seed listed in this seed book yet **CERTIFIED**, for it must be conditioned, tested in the laboratory, and labeled with the official certification tag or bulk sale certificate before it can be offered for sale as Certified Quality Seed.

Seed producers, conditioners, and distributors voluntarily use the seed certification process to assure their customers that extra care has been taken to provide them with correctly identified, genetically pure seed. The **CERTIFIED SEED** label identifies seed meeting quality requirements and assures the buyer of obtaining reliable performance of the variety named on the label.

Each member is responsible for handling certifiable seed so it will also meet the Nebraska Certification Standards for physical purity and germination. The Nebraska Seed Law requires **EACH** container of seed be labeled as to its origin, the germination percentage and date of test, the percentage by weight of pure seed, other crop seed, weed seed, and inert matter. By studying both the **CERTIFIED LABEL**, a buyer can determine the quality of the seed. If Certified seed is purchased in the bulk, each sale is accompanied by an official Retail Bulk Sale Certificate, which includes the same information as a label.

Orders for Certified seed may be accepted by the listed growers, approved conditioners, and authorized distributors only with the understanding that they will be filled if and when **ALL** the certification requirements are completed.

2. Quality Assured Seeds

The purpose of the NCIA's seed Quality Assurance (QA) program is to provide an unbiased and uniform quality control process and marketing tool for crop seeds grown in Nebraska and merchandised as branded products as permitted by applicable seed laws.

Seed enterprises voluntarily participate and will customize the process to meet their individual needs by using some or all of the services including field inspection, seed analysis, record-keeping, and labeling. In order for a producer to label seed with the QA logo, all steps in the program must be completed satisfactorily, meeting the same goals and standards as Certified seed.

Notice to Buyer: *Exclusion of Warranties and Limitations of Damages*

Seed bearing authorized Nebraska Certified Quality labels has met the minimum requirements outlined in the current edition of the *Nebraska Seed Certification Standards*.

The seed certification process relies upon samples and records provided by members/applicants which are beyond the control of the certifying agency.

Therefore, the Nebraska Crop Improvement Association *makes no warranties, expressed or implied, including warranty of merchantability, or fitness for a particular purpose concerning certified seed and hereby expressly disclaims the same.*

In no event shall the Nebraska Crop Improvement Association be responsible for *damages, actual, incidental, or consequential*, regarding certified seed provided by applicants/members and/or vendors.

However, complaints addressed to the Secretary of the Nebraska Crop Improvement Association will be investigated.

FOUNDATION SEED

The Nebraska Foundation Seed Division has available the following varieties for the purpose of seed certification.

Alfalfa	Wrangler				
Beans - Edible	Chase Pinto	Weihing GN			
Millet - Proso	Dawn	Earlybird	Huntsman	Sunrise	
Millet - Foxtail	Golden German	White Wonder			
Oats - Spring	Don	Jerry	Ogle	Riser	Rodeo
	Settler				
Soybeans	NE1900	NE3202	NE3303	NE3399	NE3402
	NE2802				
Soybeans - Specialty	U95-3813SS	U96-2825SS	U97-207209	U97-208043	U97-304539
	U96-1612	U96-2831	U97-207211	U97-3506	U97-305646
	U96-2811	U96-2906	U97-207647		
Wheat - HRW	Alliance	Cougar	Harry	Niobrara	Wahoo
	Arapahoe	Culver	Karl 92	Pronghorn	Wesley
	Buckskin	Goodstreak	Millennium	Scout 66	2137
	Centura				
Wheat - HWW	Antelope	Arrowsmith			
Grasses -	NEAC2 crested wheatgrass		NET11 intermediate wheatgrass		
Cool Season	Beefmaker intermediate wheatgrass		Manska pubescent wheatgrass		
Grasses -	Champ big bluestem		Pathfinder switchgrass		
Warm Season	Pawnee big bluestem		Shawnee switchgrass		
	Camper little bluestem		Trailblazer switchgrass		
	Trailway sideoats grama				

All inquiries about supplies of Foundation seed should be addressed to:

PLANT VARIETY PROTECTION ACT

and

HOW IT BENEFITS YOU!

- ! Any varieties listed in this publication under the Plant Variety Protection Act will be marked with the **PVP** logo and further information will be given in the variety description.
- ! It takes up to ten years to develop a new variety. PVP encourages plant breeding research to produce even better varieties for tomorrow. Without PVP, plant breeders could not afford to invest capital into new varieties and would not be interested in breeding improved varieties.
- ! Most protected varieties can only be sold as certified quality seed. This helps ensure that the seed buyer gets the variety exactly as the breeder intended it to be.
- ! The use of certified quality, genetically pure seed allows the complementary varieties you've chosen to make the most of the growing environment. After all, if the seed is less than the best, the crop will be, too.
- ! The Department of Agriculture is responsible for enforcement of Plant Variety Protection violations in Nebraska. Private seed companies are authorized to take appropriate legal action. Contact the Department of Agriculture (402-471-2394) for more information about your rights and responsibilities with PVP varieties.

WHEAT VARIETY SELECTION & COMPLEMENTATION

Because there is no single perfect variety, using complementation enables you to offset the potential weaknesses (production limitations) found in each variety with the strengths of others. This compensation improves the opportunity for yield stability and profitability of your entire wheat production system.

The number of complementary varieties you grow or the acres to be planted to each variety will depend entirely on your production conditions and special needs. There are four simple steps in using the variety complementation strategy.

1. **Identify your workhorse varieties**-These are the varieties now being grown on a majority of your acres with a reliable and proven record of performance over a period of years.
2. **Complement production needs and limits** - Select varieties that have useful characteristics needed for your specific production practices, soil conditions, and offer the best protection from diseases and other yield limiting factors common to your growing area.
3. **Complement with a range of maturities** - Select varieties that mature earlier or later than your workhorse variety, because some years may favor early varieties and some may favor later varieties. A spread of maturities will also allow you to stagger your harvest and take maximum advantage of your equipment and reduce potential losses to weathering, shattering, etc.
4. **Complement with different genetics** - Select varieties that share 50% or less similar parentage to your workhorse variety and each other. Varieties with similar genetic backgrounds can often be susceptible to the same disease and production risks.

Table 1. Partial Lists of Wheat Variety Families that Share 50% Common Parentage

<u>ABILENE</u>	<u>COLT</u>	<u>SUMNER</u>	<u>VONA</u>
Jagalene	Ike	Wesley	Lamar
Ogallala	Goodstreak	<u>TAM 105</u>	Lindon*
Rowdy	Laredo	Crimson	Prowers
<u>ARAPAHOE</u>	Pronghorn	TAM 107	Wings*
Culver	<u>KARL</u>	<u>TAM 107</u>	Yuma
Wahoo	Jagger	Akron	Yumar
<u>BRULE</u>	Karl 92**	Halt	<u>WARRIOR</u>
Arapahoe	<u>PLAINSMAN V</u>	Nekota	Cody
Harry	Karl	Niobrara	Siouxland
Niobrara	Karl 92	Prairie Red	<u>2163</u>
Redland**	<u>SCOUT</u>	<u>TAM 200</u>	2137
Tandem	Agate	Ogallala	<u>LESS THAN 50% OF ANY</u>
Vista	Arkan	Hickok	<u>FAMILY LISTED</u>
<u>CENTURK</u>	Buckskin	<u>THUNDERBIRD</u>	Big Dawg
Centura	Jules	Longhorn	Hondo
Centurk 78**	Larned	Ponderosa	Coronado
Cody	Scout 66**	<u>VICTORY</u>	Thunderbird
<u>CHISHOLM</u>	Scoutland**	Laredo	Millennium
Alliance	TAM 105	Tomahawk	
Custer	<u>SIouxLAND</u>		
Tonkawa	Rawhide		
	Windstar		

*Sister Selection (identical pedigree) **Selection from or reselection of original variety (identical pedigree)

The varieties listed within each family share at least 50% of the same parent lines. For more specific information about the parentage of your wheat varieties, see your nearby Nebraska Certified Quality Seed Source or the individual variety description in this Nebraska Wheat Seed Book.

HARD RED WINTER WHEAT

***Notice: These member of the Nebraska Crop Improvement Association have available carryover certified quality wheat seed from previous years. Contact these NCIA members for more information on availability.**

^{PVP} **AgriPro brand ABILENE**) Abilene is a moderately early maturing variety, short in height and has very good straw strength. It has a short coleoptile, very good tillering ability, and good winterhardiness. The grain has very good test weight patterns and good milling/baking qualities. It was developed, produced, and marketed exclusively under the AgriPro brand name. U.S. Protected Variety. Certificate No. 8700200. Abilene can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Scotts Bluff	Jirdon Agri Chemicals*	Morrill	308-247-2126		

^{PVP} **ABOVE**) Above is an awned, white-chaffed, early maturing, moderately short variety. It has good straw strength with good winterhardiness. The **non-transgenic** herbicide tolerance in Above was developed by American Cyanamid (now BASF) using induced mutagenesis. This is a process that has been used by wheat breeders and geneticists for several decades to enhance the range of variability available for genetic improvement. **Above is a wheat to be used as a component of the BASF CLEARFIELD Production System.** CLEARFIELD is a unique production system comprised of herbicide-tolerant seed varieties and Beyond herbicide, a new imazamox-based herbicide to manage problem weeds. This system is designed to control weeds like jointed goatgrass, cheatgrass and other *Bromus spp.*, ryegrass, foxtails, wild oats, wild mustard, and volunteer cereals. This production system also provides a superior broad-spectrum grass control with a wide application window. This system incorporates low rates of the Beyond herbicide which allow a large rotational crop profile and fits all tillage methods.

The CLEARFIELD Production System will include a stewardship program that will help maintain the stability of the system. **This means the grower must purchase Certified Above wheat seed and must agree not to save seed for planting.** This means the grower must sell all of his production. Any unauthorized planting of the Above variety will be punishable under the U.S. Patent law. Above is available from your NuPride Genetics Network Affiliate. U.S. Protected Variety. Certificate No. 200200206. Above can only be sold as a class of certified seed.

^{PVP} **ARAPAHOE**) Arapahoe is a medium maturity, medium height variety with very good winterhardiness and tillering ability. It is well adapted to most dryland sites in the northern and western HRW regions. Arapahoe has a medium length coleoptile and fair to good straw strength. The grain has good test weight patterns and milling/baking qualities. Arapahoe was developed by Nebraska and the USDA-ARS from the cross Brule/3/Parker*4/Agent//Belot.198/Lancer. U.S. Protected Variety. Certificate No. 8900295. Arapahoe can only be sold as a class of certified seed.

BUCKSKIN) Buckskin is a moderately early maturing, tall variety with good yield stability in the Nebraska panhandle and surrounding dryland production areas. It has fair winterhardiness, good test weight patterns, long coleoptile, good tillering ability, moderately strong straw, and good milling/baking qualities. Buckskin was developed by Nebraska and the USDA-ARS from the cross Scout/4/Quivira/2/Tenmarq/3/Marquillo/Oro.

^{PVP} **AgriPro brand CORONADO**) Coronado is a very early maturing variety and is short in height, like Tomahawk, with good tillering ability and very good straw strength. The coleoptile is short in length. Winterhardiness is fair. The grain has good test weight patterns and acceptable milling/baking qualities. Coronado was developed from a cross of two proprietary breeding lines. Certified seed is produced and marketed exclusively under the AgriPro brand name. U.S. Protected Variety (PVPA 1994). Certificate No. 9500307. Coronado can only be sold as a class of certified seed.

Custer	Arrow Seed Company	Broken Bow	308-872-6826		

COUGAR) Cougar is a medium maturing, medium height variety and is slightly shorter than Arapahoe and Rawhide. It was tested under the designation NE93496. Yield performance and protein content are similar to Arapahoe, but with much superior standability and improved test weight patterns (+ 3 lbs/bu). Cougar has a long coleoptile and is well adapted to both dryland and irrigated production conditions. It is moderately resistant to stem rust; moderately susceptible to leaf rust; and susceptible to soilborne mosaic virus, Hessian fly, barley yellow dwarf virus, and wheat streak mosaic virus. Cougar was developed by Nebraska and the USDA-ARS from the cross NE85707/Thunderbird.

^{PVP} **CULVER**) Culver is a medium maturing, medium height variety best adapted to south central and southwest Nebraska and similar dryland wheat production areas in adjacent states. It was tested under the designation NE93554. Culver may be described as a shorter Arapahoe, 2 to 3 inches shorter, with higher yield, similar in maturity and other agronomic/end-use traits, but is susceptible to Hessian fly. Its performance in western Nebraska has been equal to Arapahoe. It has fair to good winterhardiness, medium length coleoptile, very good tillering ability, and moderately strong straw. Culver was developed by Nebraska and the USDA-ARS from the cross of NE82419/Arapahoe which includes parentage from Trapper, Scout, Buckskin, Homestead and others. U.S. Protected Variety (PVPA 1994). Certificate No. 9900404. Culver can only be sold as a class of certified seed.

^{PVP} **AgriPro brand DUMAS**) Dumas is a medium early maturing, short variety with excellent straw strength. It has average winterhardiness (equal to Jagger) with a short coleoptile. It has resistance to stem rust and is moderately susceptible to leaf rust and wheat streak mosaic. Dumas is recommended for irrigate and high production dryland areas. Dumas is a good quality wheat with very good test weight. Seed is produced and marketed exclusively under the AgriPro brand name. U.S. Protected Variety (PVPA 1994). Certificate No. 200100218. Dumas can only be sold as a class of certified seed.

NuPride EMPIRE brand) Empire is late maturing, 1-2 days later than Arapahoe and Wesley. Empire has moderate straw strength with a short coleoptile. The mature plant height is 35 inches. It is moderately resistant to stem rust, leaf rust, and Hessian fly. Empire is susceptible to wheat soilborne mosaic virus and wheat streak mosaic virus, but demonstrates a low level of tolerance to barley yellow dwarf virus. Empire is a brand name for NE97638 which was developed by the Nebraska Agricultural Experiment Station. It was selected from the cross NE90614/NE87612. The pedigree of NE90614 is Brule/4/Parker*4/Agent//Beloterkovskaia 198/Lancer /3/Newton/Brule. The pedigree of NE87612 is Newton//Warrior*5/Agent/3/Agate sib. Empire is marketed exclusively under the NuPride Genetics Network brand name.

GOODSTREAK) Goodstreak is medium in maturity about 1 day earlier than Buckskin and 2 days later than Pronghorn. It has a long coleoptile similar in length to Pronghorn and slightly shorter than Buckskin. The mature plant height of Goodstreak is 38 inches. It has moderate straw strength better than Arapahoe, Buckskin, and Pronghorn, but not as good as Wesley. The winter hardiness of Goodstreak is good to very good and comparable to other winter wheat cultivars adapted and commonly grown in Nebraska. Goodstreak is moderately resistant to stem and stripe rust and Hessian fly (better than Buckskin). It is susceptible to leaf rust and wheat streak mosaic virus. Goodstreak was evaluated as NE97465 in Nebraska yield nurseries. It was selected from the cross SD3055/KS88H164//NE89646. The pedigree of SD3055 is ND604/SD2971 where ND604 is Len//Butte/ND526 and SD2971 is Agent/3/ND441//Waldron/Bluebird/4/Butte/5/Len. The pedigree of KS88H164 is Dular/Eagle//2*Cheney/Larned /3/TAM107. The pedigree of NE89646 is Colt *2/Patrizanka. Goodstreak was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS and released in 2002 by the developing institutions and the Wyoming Agricultural Experiment Station. Application for Plant Variety Protection is anticipated.

HALLAM) Hallam is an awned, white-glumed, moderately early maturing, semi-dwarf hard red winter wheat. The mature plant height of Hallam is shorter than Millennium and 2.5 inches taller than Wesley. After heading, the canopy is moderately closed and inclined to nodding. Hallam has moderate straw strength with good winterhardiness similar to Abilene. It is moderately resistant to stem rust, stripe rust, and Hessian Fly. It is moderately susceptible to leaf rust. Hallam is susceptible to wheat soilborne mosaic virus and barley yellow dwarf. It also may contain a low level of tolerance to wheat streak mosaic virus. Hallam was selected from the cross Brule/Bennett//Niobrara that was made in 1992 and was developed and released by the University of Nebraska Experiment Station, and the USDA-ARS.

^{PVP} **JAGGER**) Jagger is a very early maturing, moderately short variety with good straw strength. It has poor winterhardiness similar to TAM 200 and Newton. Jagger has good protection to many of the important wheat diseases in Kansas. It is susceptible to Hessian fly and powdery mildew. Grain has average test weight patterns with acceptable milling and baking qualities. Jagger was developed by Kansas and the USDA-ARS from the cross KS82W418/Stephens. U.S. Protected Variety (PVPA 1994). Certificate No. 9500324. Jagger can only be sold as a class of certified seed.

WESLEY) Wesley is a moderately early maturing, moderately short height variety with excellent straw strength. It was tested as N95L158. Wesley is bronze chaffed similar in color to Jagger. Compared to 2137, it has similar adaptation and yield on optimum production soils and sites in the central and northern Great Plains. Wesley is more winterhardy, about 2 days later heading, slightly shorter, with similar protein and test weight patterns, and a lower level of protection to some foliar diseases. It is genetically complementary to most varieties being grown in Nebraska. Wesley was derived from the cross Sumner sib (Plainsman V/Odesskaya 51)//Colt/Cody. It was developed by the USDA-ARS in cooperation with Nebraska and co-released by those institutions with South Dakota.

^{PVP} **2137**) 2137 is an early maturing variety of moderately short height, slightly taller than TAM 107 and Karl 92. It can be grown statewide and is best adapted to more productive soils and sites. Straw strength is very good to excellent. 2137 is well suited to irrigated production. Its above average resistance to residue-borne foliar diseases makes it a useful choice for reduced tillage/continuous wheat systems. 2137 is very susceptible to fusarium head scab. It has a moderately short coleoptile, good tillering ability, and fair to good winterhardiness. Grain has average test weight patterns with acceptable milling and baking qualities. 2137 was selected by Kansas State and USDA-ARS from lines resulting from the cross W2440/W9488//2163 made by Pioneer HiBred Int'l. U.S. Protected Variety. (PVPA 1994) Certificate No. 9600304. 2137 can only be sold as a class of certified seed.

HARD WHITE WINTER WHEAT

ANTELOPE) Antelope is an awned, white-glumed hard white winter wheat that has shown exceptional productivity under irrigated trials in western Nebraska, eastern Wyoming, and eastern Colorado. It combines high grain yield under irrigation with excellent lodging resistance. Maturity is moderately early, the same as Pronghorn. Antelope shows resistance to stem rust, stripe rust and has tolerance to barley yellow dwarf virus. Antelope is susceptible to wheat streak mosaic virus, wheat soilborne mosaic virus, Russian wheat aphid, and Hessian fly. Antelope was derived from the cross Pronghorn/Arlin and was developed by USDA-ARS, the University of Nebraska Experiment Station, and the University of Wyoming Experiment Station.

^{PVP} **AgriPro brand AP401 CL**) AP401 CL is a hard white wheat developed by AgriPro Seeds exclusively for use in a contract grown Identity Preserved grain production system. AP401 CL has short plant height with medium maturity and excellent straw strength. It is moderately resistant to leaf rust and resistant to soilborne mosaic virus and spindle streak mosaic virus. Milling and baking characteristics are good. **AP401 CL is a wheat to be used as a component of the BASF CLEARFIELD Production System.** CLEARFIELD is a unique production system comprised of herbicide-tolerant seed varieties and Beyond herbicide, a new imazamox-based herbicide to manage problem weeds. This system is designed to control weeds like jointed goatgrass, cheatgrass and other *Bromus spp.*, ryegrass, foxtails, wild oats, wild mustard, and volunteer cereals. This production system also provides a superior broad-spectrum grass control with a wide application window. This system incorporates low rates of the Beyond herbicide which allow a large rotational crop profile and fits all tillage methods.

The CLEARFIELD Production System will include a stewardship program that will help maintain the stability of the system. **This means the grower must purchase Certified AP401 CL wheat seed and must agree not to save seed for planting.** This means the grower must sell all of his production. Any unauthorized planting of the AP401 CL variety will be punishable under the U.S. Patent law. AP401 CL is a hard white wheat developed by AgriPro Seeds exclusively for use in a contract grown Identity Preserved grain production system. It has short plant height with medium maturity and excellent straw strength. AP401 CL is moderately resistant to leaf rust and resistant to soilborne mosaic virus and spindle streak mosaic virus. Milling and baking characteristics are good. U.S. Plant Variety Protection Applied For (PVPA 1994). Certificate No.200300045. AP401 CL can only be sold as a class of certified seed.

^{PVP} **BETTY**) Betty is a moderately early, moderately short height hard variety. It was developed by Kansas State from a single plant selected from the variety Jagger and tested as KS84063-2W. It is best adapted to central and western Kansas, like Jagger, but is more winterhardy. Straw strength is moderately good. Betty is currently rated as resistant to soilborne mosaic virus; moderately resistant to wheat spindle streak mosaic, tan spot and septoria leaf blotch; intermediate (MS-MR) to stem rust and wheat streak mosaic; moderately susceptible to leaf rust; and susceptible to Hessian fly. Betty is comparable to Jagger in milling and bread baking properties. U.S. Protected Variety. Certificate No. 200000155. Betty can only be sold as a class of certified seed.

^{PVP} **TREGO**) Trego is a moderately early maturing variety, similar in maturity to 2137. Mature plant height is moderately short. Based on performance trials, it appears best adapted to central and western production areas, irrigated or rainfed. Coleoptile length is moderately short. Trego has fair to good standability, and test weight patterns and protein content are average. Overall bread baking quality has been rated above average. Trego is moderately resistant to stem rust, leaf rust, soilborne mosaic, and wheat spindle streak mosaic virus; moderately tolerant to wheat streak mosaic virus; moderately susceptible to tan spot; and susceptible to Hessian fly. U.S. Protected Variety (PVPA 1994). Certificate No. 200100117. Trego can only be sold as a class of certified seed.

TRITICALE

^{PVP} **NuPride brand NE422T**) NE422T is a late maturity (7 days later than Newcale) high yielding winter forage triticale with good winterhardiness. NE422T is a tall forage triticale (12 inches taller than Newcale) with good to average straw strength. It is moderately resistant to stem rust, leaf rust, and wheat streak mosaic virus. NE422T was developed by the Nebraska Agricultural Experiment Station and the USDA-ARS. Seed of NE422T may be legally produced and labeled for sale as Certified seed by qualified members of a recognized marketing association. In Nebraska this marketing association is the NuPride Genetics Network. U.S. Plant Variety Protection applied for (PVPA 1994). Certificate No. 200200153. NE422T can only be sold as a class of certified seed.

NEBRASKA CERTIFIED LANDSCAPE QUALITY TURFGRASS SOD SOURCES

Nebraska Certified Quality Sod can be readily identified by the special Certificate of Quality and Composition attached to the buyer's invoice. This Certificate is issued by the Nebraska Crop Improvement Association (NCIA) for exclusive use on certified quality sod.

Nebraska Certified Quality Sod is planted with Sod Quality Certified seed of well adapted varieties, grown, and harvested using approved procedures. It is inspected regularly by NCIA to assure it meets high standards for varietal identity, freedom from objectionable weeds and grasses, plus other measurable quality factors affecting performance.

The following Nebraska sod producers are voluntarily using the sod certification process on selected fields in 2003 to assure their customers that extra care has been taken to provide a premium quality turfgrass sod.

COOL-SEASON GRASSES

Bromegrass is an introduced cool-season, sod-forming grass which produces abundant forage in the spring and late summer for hay and pasture. It is very palatable until mature. It is widely adapted to eastern and central Nebraska and responds to intensive management practices. It is an early maturing grass and has moderate tolerance to drought and grazing.

LINCOLN) Lincoln was developed by Nebraska and the USDA-ARS from selections made in long established fields derived from seed of Hungarian origin. It has good seedling vigor and high forage yields under favorable conditions. It is easily established on critical planting sites.

Knox	Condon Farms Inc.	Creighton	402-358-3506		121

Indian Ricegrass is a native warm-season bunchgrass. It ranges in height from 13 to 24 inches depending on precipitation. Indian Ricegrass is most commonly found on coarse textured and sandy soils. This grass is highly palatable to all classes of livestock. It provides excellent early spring feed, cures exceptionally well, and is valued as a winter feed for livestock.

NEZPAR) Nezpar Indian ricegrass was originally collected in 1935 from a site south of White Bird, Idaho, by the Pullman, Washington, Plant Material Center (PMC). It was selected from 152 accessions for its vegetative characteristics and low seed dormancy by the Aberdeen, Idaho, PMC and released in 1978. It is adapted to the Northwest and inter-mountain regions where precipitation averages 8 inches or above. It prefers gravely to loamy to sandy soils. It is noted for its large erect plant type, robust stems, abundant leaves, medium to small dark, nearly hairless elongated seeds, and good to excellent seedling vigor.

Scotts Bluff	Carl Thomas	Morrill	308-247-2096	8	

Intermediate Wheatgrass is a moderately late maturing, cool-season, sod-forming grass that produces excellent quality forage for hay or grazing in the late spring, early summer and fall. It was introduced from eastern Europe in the 1930's and is well adapted to all Major Land Resource Areas in Nebraska. Intermediate wheatgrass is more drought tolerant than smooth brome but less tolerant than crested wheatgrass. Plants are medium height (4+ feet), well tillered, and robust.

^{PVP} **BEEFMAKER**) Beefmaker is an excellent intermediate wheatgrass for grazing. The in vitro dry matter digestibility (IVDMD) rating is one to two percentage points higher than other released wheatgrasses such as Haymaker. Plant height for Beefmaker is 42.5 inches. The head length is 9.9 inches, and head width is 3.7 inches. The flag leaf is located approximately 30.9 inches from the ground. Beefmaker was developed by USDA-ARS and the University of Nebraska. U.S. Plant Variety Protection Applied For (PVPA 1994). Certificate No. 200400232.

Western Wheatgrass is a native cool-season perennial, sod forming grass. It is a tenacious, dry range type of native grass which makes good spring grazing for several weeks before it becomes stemmy and unpalatable. Western wheatgrass is generally saline or alkaline tolerant. It does not do well on light soils but will tolerate periods of drought.

ARRIBA) Arriba is a rapidly germinating variety with good seedling establishment. It has dense, dark green, medium height foliage with aggressive rhizomes. It was developed by the Plant Materials Center at Los Lunas, NM, from a selection found near Arriba, CO.

Custer	Arrow Seed Company	Broken Bow	308-872-6826	10	

Canada Wildrye is a cool-season, native grass that prefers moist sites. This perennial bunch grass has very good seedling vigor and early spring growth, which makes it easy to establish and cover ground rapidly. It also has some shade tolerance and will grow in sandy soil. The seed head is a nodding spike that matures in July. Canada wildrye leaf blades are flat with a rough upper surface and finely toothed margins. It makes a good companion in a prairie mixture. The plant has ornamental value and the dried seed heads look great in flower arrangements

MANDAN) Mandan wildrye is shorter and is more leafy than ordinary Canada wildrye. It has a longer useful life than many strains and has the ability to withstand grazing over a period of several years. It is easily established and with its rapid grow can produce high forage yields. Mandan can be grown over a wide geographical area. It is susceptible to rust but is more resistant than other strains. It was developed at the Northern Great Plains Field Station from a mass selection collected on upland near Mandan, North Dakota.

APPROVED SEED CONDITIONERS

An active APPROVED SEED CONDITIONER system is very important and an integral part of Nebraska's certification program. Approved Conditioners are seed cleaning firms who are authorized by the Board of Directors to purchase field-approved seed and move it to their plants for conditioning, submit samples for testing, order tags or certificates, and merchandise the finished product on a retail basis.

The objectives of the Approved Conditioner program are:

1. To expand the marketing options of seed producers who may not have adequate cleaning or merchandising facilities.
2. To provide the retail seed trade with reliable high quality sources of seed as markets demand.
3. To improve the quality of seed available, while insuring maintenance of varietal purity.
4. To promote acceptance and use of Nebraska certified seed.

CUSTOM CERTIFIED CONDITIONERS

In Nebraska, the function of the Custom Certified Conditioner is solely to provide seed cleaning and handling services) services which prepare certifiable seed produced by members from inspected acres for marketing channels.

Seed conditioners in this category voluntarily request inspection by the Association to provide quality assurance for the seed producer and seed consumer. Custom Certified Conditioners are subject to minimal procedural and equipment guidelines which are enacted by the NCIA Board of Directors.

The objectives of the Custom Certified Conditioner program are:

1. To provide necessary conditioning services for seed producers and merchandisers who do not have adequate cleaning facilities.
2. To improve the quality of seed available while insuring maintenance of varietal purity.
3. To promote acceptance and use of Nebraska certified seed.

NEBRASKA CROPPING DISTRICTS

2005 NCIA MEMBERS

Grower (GR)) A member who applies for field inspection services and used the services of either Custom or Approved Conditioners to prepare seed for marketing channels.

Grower-Conditioner (GC)) A member who applies for field inspection services and has adequate facilities for conditioning his own seed produced from inspected acres in preparation for marketing channels.

Custom Certified Conditioner (CC)) A member who may or may not apply for field inspection services and has adequate facilities for conditioning seed produced from inspected acres (by himself or other members) in preparation for sale in marketing channels.

Approved Seed Conditioner (AC)) A member who may or may not apply for field inspection services, has adequate facilities for conditioning seed, and may purchase bulk uncleaned seed from inspected acres of a crop grown by another member for conditioning, tagging, and sale in marketing channels as a class of certified seed.

Associate Member (AM)) Any other person, partnership, or corporation who would not be involved directly in the production, conditioning, or marketing of seed but is interested in furthering the goals of the Association may become a non-voting member.
