EXPERIMENT STATION CIRCULAR 27

List of Available Publications, July 1, 1925

Publications of the Agricultural Experiment Station and the Agricultural Extension Service are sent free to all persons requesting them. Because of the cost of publication no regular mailing list to which all bulletins are sent can be maintained. Individuals should request the specific bulletins in which they are interested. Firms or individuals desiring to distribute large quantities of bulletins will be supplied with them at the cost of publication, but the printing of any personal advertising matter on such bulletins is prohibited.

New Bulletins

The following are brief synopses of new bulletins issued by the College of Agriculture from January 1, 1925, to July 1, 1925.

EXPERIMENT STATION BULLETINS

Bulletin 206.—Annual Forage Crops. The early and medium late varieties of sweet sorghum together with Sudan grass and Common and German millet comprise the most important annual forage crops suitable for hay in this state. In a comparative 4-year test of 24 varieties of annual forage crops at the Nebraska Experimental Station, the sweet sorghums proved most productive of cured forage. Complete details of the experiments with all Nebraska forage crops are contained in this bulletin.

Bulletin 207.—The Spindle-Tuber Disease. The spindle-tuber disease is one of the most prevalent potato diseases occurring in all parts of Nebraska. It does much damage to the crop in that it reduces the yield and injures the market quality. Recommendations for control are (a) selection of a good strain of seed potatoes as free as possible from this and other diseases, (b) selection of the best type tubers for planting in a seed plat, (c) isolating this seed plat from all other potato fields by a distance of at least 300 feet, (d) roguing this plat severely, early, and frequently, removing all suspicious looking plants, (e) selection of tubers of best type produced in this plat for use in the seed plat the following year and using the remainder of the potatoes for the commercial planting.

Bulletin 208.—Hog Prices. The more important forces affecting hog prices are described in this bulletin — supply and demand, cost of production, market strategy, monopoly, the quantity of money in circulation and the rapidity with which it circulates, credit, transportation costs, commercial costs, and import duties. Corn and hog ratios are discussed. The bulletin also takes up the monthly and yearly variations in hog receipts and hog prices, pork exports, and cycles in hog production.

EXPERIMENT STATION CIRCULARS

Circular 25.—Tuberculosis of Swine. A popular discussion of the entire matter with special reference to extensive investigations carried on by the University of Nebraska. Evidence has been furnished to show that in some sections avian infection may be a more prolific cause of tuberculosis among hogs than bovine infection. Preventive measures are discussed.

Circular 27.—List of Available Publications.

EXPERIMENT STATION RESEARCH BULLETINS

Research Bulletin 29.—Further Studies on the Effect of Environment on Potato Degeneration Diseases. A scientific publication. Readers interested in popular bulletins on potato diseases should order Experiment Station Bulletin 207 and Extension Circular 1256.

Research Bulletin 30.—An Inquiry Into the Cause of the Increase of Tuberculosis of Swine. A detailed report of the investigations at the University of Nebraska. Readers interested in a popular discussion of the subject should order Experiment Station Circular 25.

EXTENSION CIRCULARS

Circular 126.—Cereal Smuts and Their Control. Describes the smuts of small grains, their occurrence and distribution. Outlines the formaldehyde treatment for smuts of oats, barley, and sorghums, and the copper carbonate treatment for stinking smut of wheat and the loose smut of barley and wheat.

Circular 127.—Seed Corn Testing. Outlines the rag doll and individual ear test methods. Gives suggestions for picking seed ears and for shipping seed corn.

Circular 128.—Barberry Eradication in Nebraska. Gives the results obtained by the first complete survey of Nebraska and other wheat producing states in barberry eradication. Outlines the relation of the barberry to wheat rust and the reasons why this bush should be destroyed.

Circular 228.—Farm Slaughter of Hogs. Gives directions for farm butchering, handling, and curing of pork. Illustrates each important step of butchering with a clear-cut picture. Gives directions for canning, salting, and smoking meats, and for making sausages and soaps.

Circular 229.—Feedometer. A set of two circular disks fastened together in such a way as to give the farmer all the boiled down, practical suggestions he can use about feeding every farm animal. Can be hung with one nail on any door or in a 9 x 9 inch space on the wall.

Circular 1256.—Two Important Groups of Nebraska Potato Diseases. Describes (1) potato wilt and tuber rots and (2) "run-out" potatoes caused by degeneration diseases. Suggestions for control of diseases.

Circular 1257.—Grape Growing in Nebraska. Deals particularly with the care and pruning of young vineyards but also discusses in detail the varieties adaptable to Nebraska, the planting of a young vineyard, and the marketing of grapes.

Circular 1258.—Cane and Bush Fruits for Nebraska. Recommends the varieties of blackberries, raspberries, gooseberries, and currants that produce best in Nebraska and discusses how to plant and care for each of them.

Circular 1418.—The Poultry Industry in Nebraska. Emphasizes the marketing phase of the poultry industry after it tells thru graphs and figures that Nebraska ranks as one of the leading poultry producing states in the country. Gives reasons why the poultry industry should pay a larger profit in Nebraska than in many other states.

MIMEOGRAPHED CIRCULARS

- Circular 228.—Farm Slaughter of Hogs.
- Circular 518.—Program for Town or Rural Community.
- Circular 520.—February Program.
- Circular 521.—Arbor Day Program.
- Circular 1427.—Suggestions for a Grading System for the Producer of Market Eggs.
- Circular 1504.—Life History and Control of Army Cutworm.
- Circular 1600.—Improving Farm News.
- Circular 1601.—Project Story Examples.
- Circular 1602.—Writing That First Sentence of a News Item.

MISCELLANEOUS PUBLICATIONS

Thirty-Eighth Annual Report of the Agricultural Experiment Station. Presented to the Governor February 2, 1925. Outlines the experimental work being carried on at the station.

Book of Views of the College of Agriculture of the University of Nebraska. Contains sixteen full-page pictures of the campus and activities of the institution.

Annual Catalog of the College of Agriculture. Describes the course and requirements of the College of Agriculture, including work in home economics.

Annual Catalog of the School of Agriculture. Describes the secondary or high school agricultural and home economics courses.

Illustrated Folder describing the activities of the School of Agriculture.

Just Over the Hill. A folder describing the new poultry course of the School of Agriculture.

Home Economics at the University of Nebraska. An illustrated circular describing the work of that department.

Available Bulletins

The bulletins listed below are publications issued before January 1, 1925, and still available for distribution. Mimeographed extension circulars are also included here. For the convenience of the reader publications are here classified according to subjects.

AGRICULTURAL ENGINEERING

EXPERIMENT STATION PUBLICATIONS

- | | |
|---|---------------------------------------|
| Circular 2 Pump Irrigation in Nebraska | Circular 14 Hog Houses for Nebraska |
| Circular 13 Nebraska Tractor Law and Rules for Official Tests | Bulletin 200 Results of Tractor Tests |
