Conference Purpose

Editor's note—The following statement from the Proceedings of the 3rd EWDC represents a succinct summary of the reasons behind convening the EWDC.

Conflicts between humans and wildlife have continued to increase with human population growth and dispersion into rural habitats, with intensified land use of all types, and with greater use of natural landscapes in the urban/suburban environment. Wildlife problems are of major concern in numerous agricultural, forestry, and residential situations. Damage involves loss of resources, loss of property, and sometimes loss of life. Continued support for maintenance of many wildlife populations is dependent on our ability to address these problems.

Wildlife damage control is an increasingly important discipline within the profession of wildlife management. The discipline has been developing rapidly as a science and in complexity. There is a need to periodically bring research, extension, and agency personnel together to discuss recent advances in technology, problem definition, and policy. Through this type of interchange new and better damage control strategies are formulated, priority areas for research are identified, and new information is disseminated. The Eastern Wildlife Damage Control Conference continues to be a major means for improving communication within the discipline.
