## Abstract

Same sex classes has been a topic argued by researchers for generations. Developed in the 18th century, this trend began gaining popularity in private schools since the late 1990s. In the current generation same sex classes are mostly only in private schools. Research shows, while there are some benefits, implementing same sex education in public schools would be expensive, timely and a risk to the system.

## Key Points

### Reasons why it should be implemented:

- Student attendance improves
- Distractions decline
- Student participation increases
- provides poor families the chance to see their children excel in single-sex classrooms, an option once only available to families able to pay private school tuition.

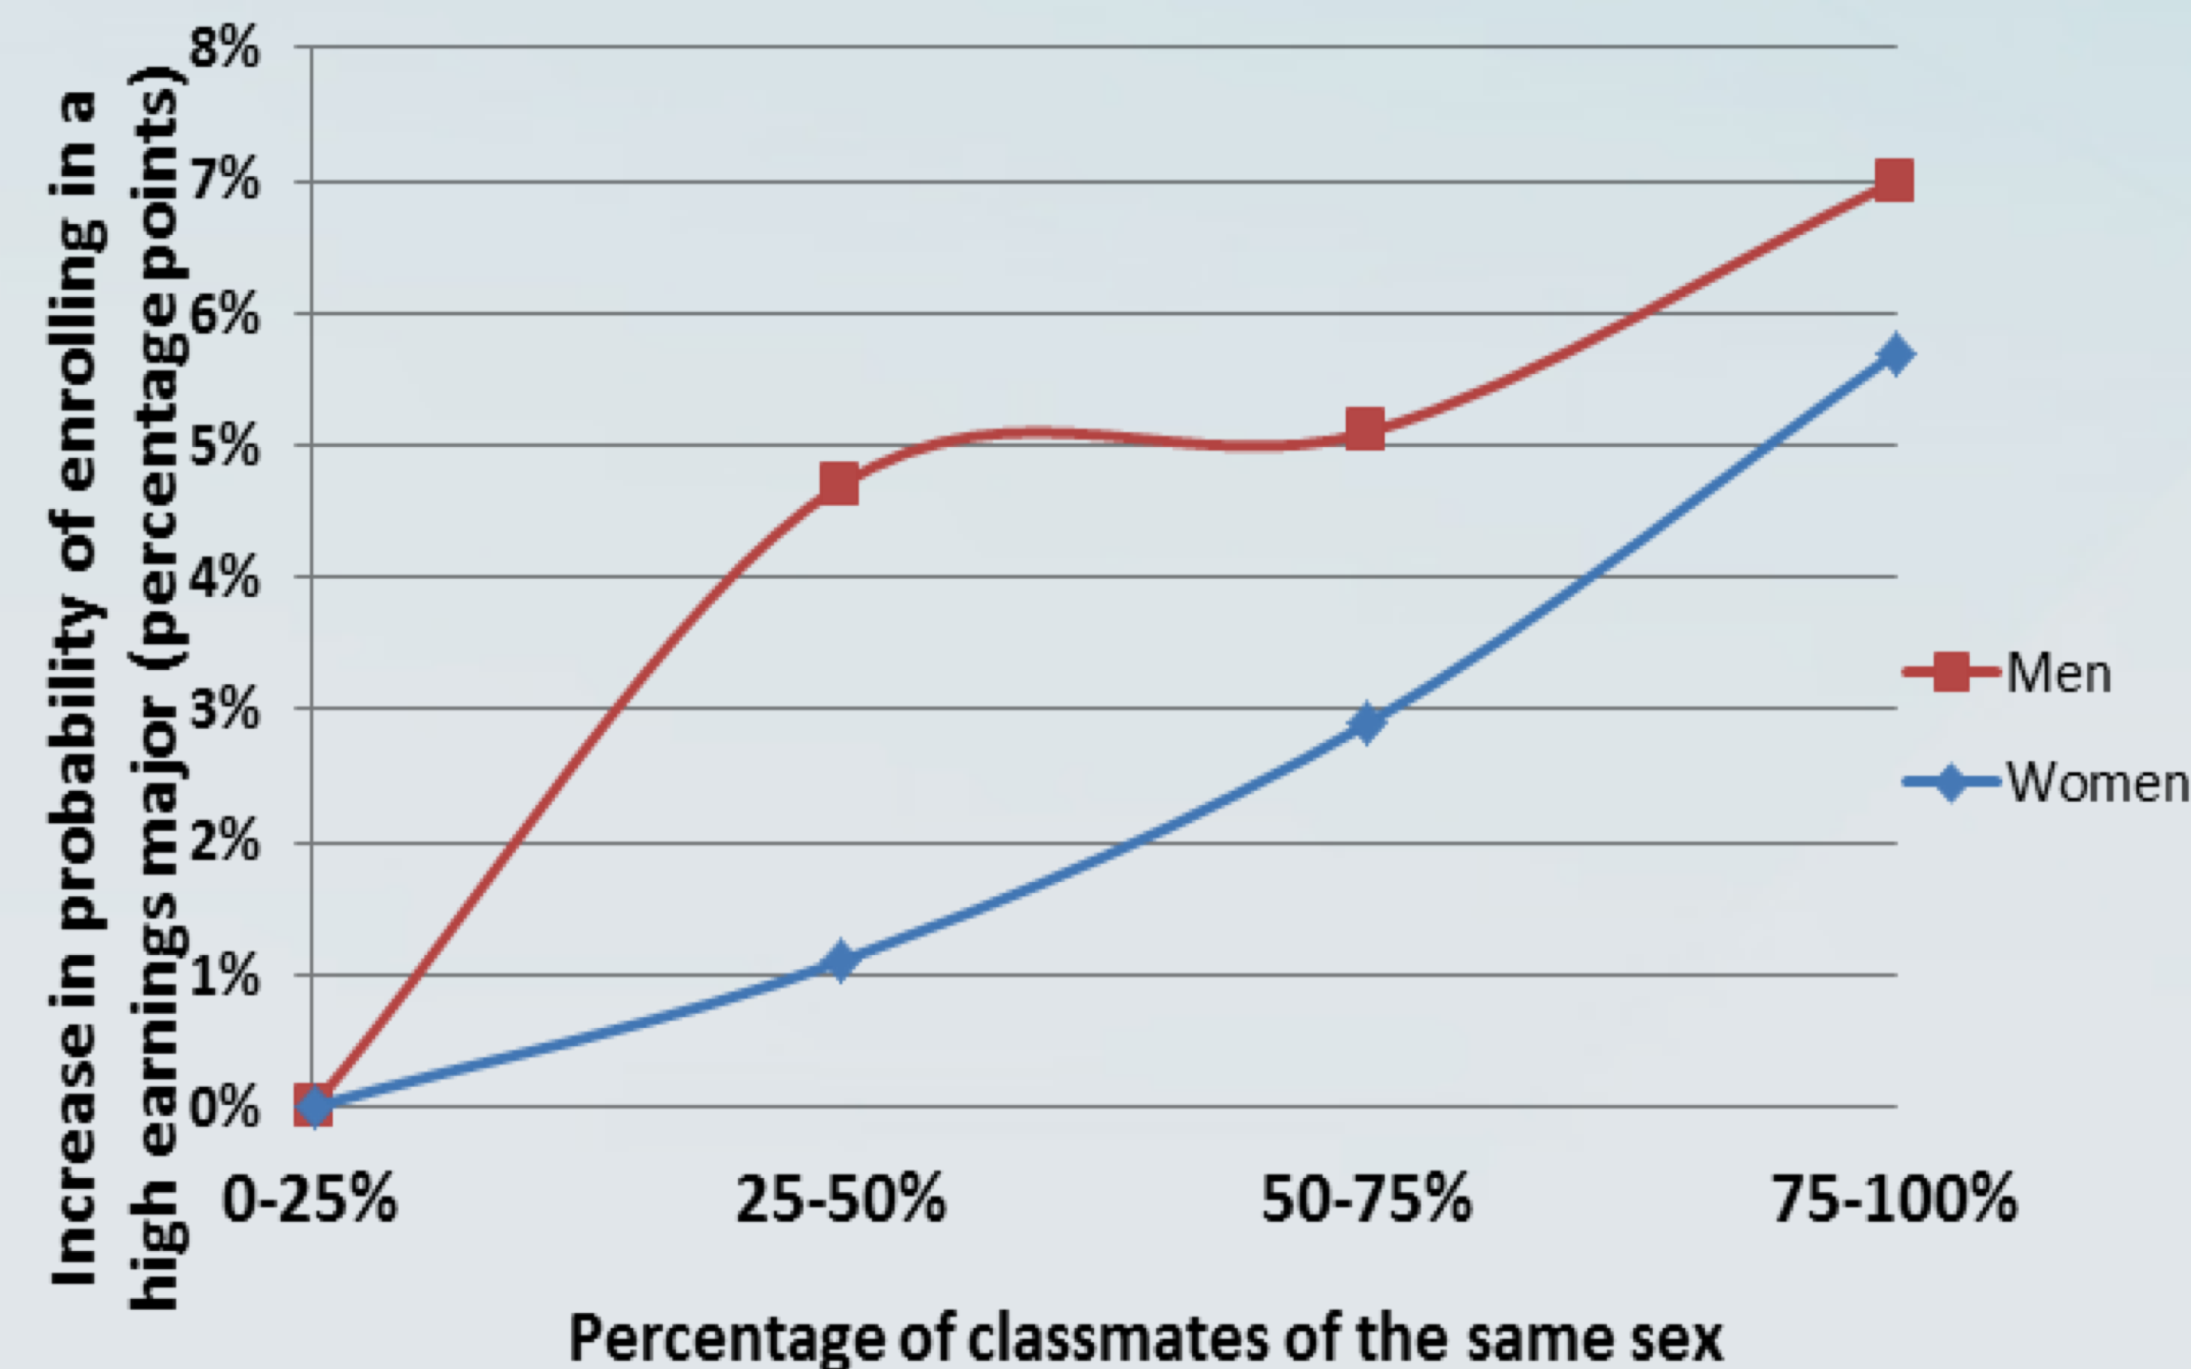

### Reasons why it shouldn't be implemented:

- Increased gender stereotyping
- Undermines gender equality
- Doesn't prepare for the "real world"
- Doesn't let experience diversity

## Conclusion

From the research conducted one can see that there are many reasons why same sex classes could be in our education system. Personally I think that they shouldn't be implemented. It would cost too much money and time to implement the system. Also it would limit students opportunity to work cooperatively with the other sex. This is important because in the "real" world after graduating you can't choose what gender you work with.

Future research ideas for this topic would be to find out if these classes affect a certain type of gender differently than another and if race makes a difference.
