Pheasants

Although the pheasant population in 1962 was less than that of 1961, the hunter harvest appeared to be about the same. Spring population estimates showed a slight reduction from the previous year and a seven per cent drop from the past seven-year average. Summer counts showed an increase in the central portion of the state, moderate declines in the east, east-central, and southwest, unchanged in the panhandle, and up slightly in the Sand Hills.

Harvest figures indicated hunters averaged 1.20 birds per day and 8.88 for the season. The calculated harvest for the entire 86-day season was 1,379,000, compared to 1,298,000 for the 72-day 1961 season.

1962 Pheasant Densities

Quail

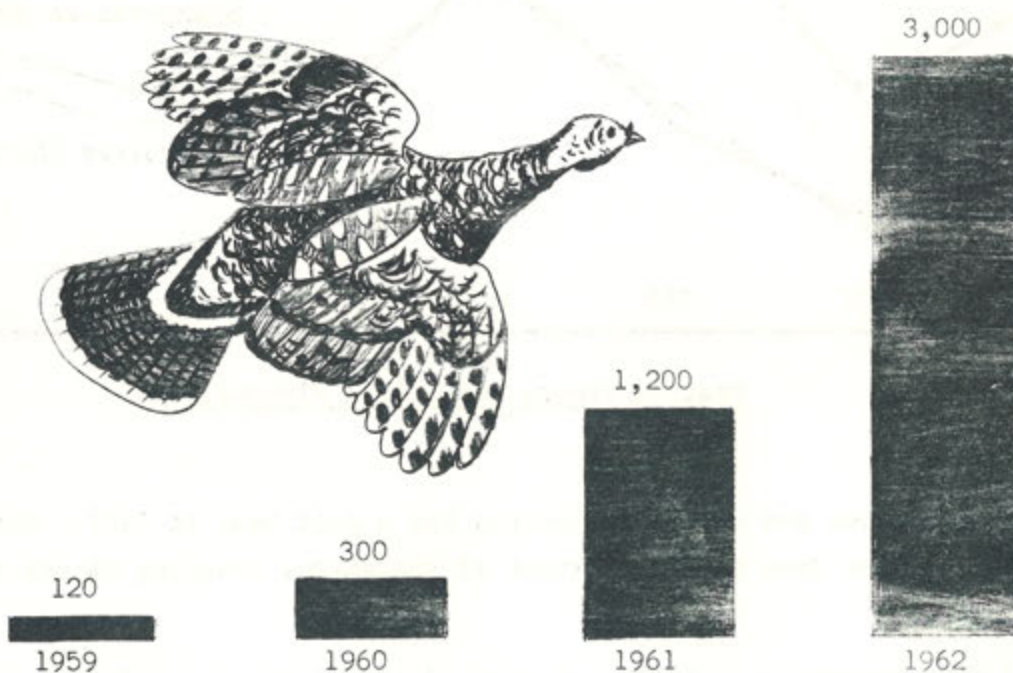

Bobwhite apparently held his own in Nebraska's southern zone, but suffered a drastic decline in the northern part of the state. The sharp drop is directly attributable to the severe weather during the winter of

1961-62. Hunter success also showed a decrease from the 1961 season and was comparable to the 1960 season.

Turkey

Nebraska's first wild turkey season was held in 1962 with 500 permits authorized and issued for a nine-day season. With a limit of one turkey per hunter, about 412 hunters participated and harvested 281 turkeys. The population growth that originated with 28 Merriam's turkeys released in the Pine Ridge in 1959 continues to be one of the most amazing success stories in Midwest game management history.

Rio Grande turkey releases continued during 1962 with 393 birds liberated in January and February. Reports of reproduction were received from most release sites but data at this time is not sufficient to determine prospects of success.

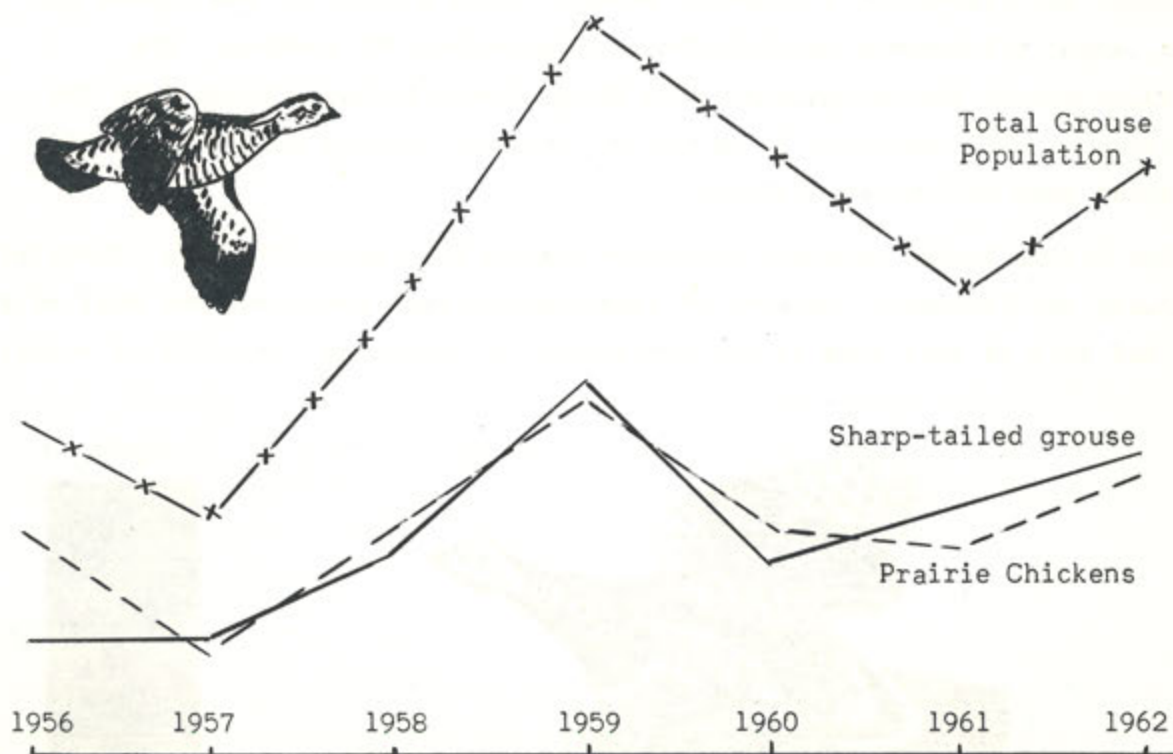

Pine Ridge Turkey Population Growth

Grouse

The year 1962 started out well for the state's grouse population, but ended on a rather sour note. Spring counts showed an increase in grouse numbers of 28 per cent over 1961. Prairie chickens were up 34 per cent and

sharptails up 20 per cent. Reproduction was spotty or poor in some areas and normal in others. Overall reproduction was down and the result was a fall population substantially lower than that in 1961. Consequently, hunter-success dipped 35 per cent from the previous year--partly as a result of the lower population and partly as a result of poor weather on opening day.

Prairie Grouse Population Fluctuations

Waterfowl

Both waterfowl and waterfowl hunters had a poor year in 1962. Duck hunter success was down in all sections of the state, dropping 55 per cent in some areas.

The 1962 breeding population of ducks declined 50 per cent from 1961. Untimely rainfall and flooding resulted in a rather poor nesting season in the Sand Hills. Late rains resulted in a retarded hatch and a rather poor one.

The severe drought conditions of the past few years in the prairie provinces of Canada continued in 1962 over much of the prime breeding area. The result was more restrictive regulations for the 1962 duck season. Fewer

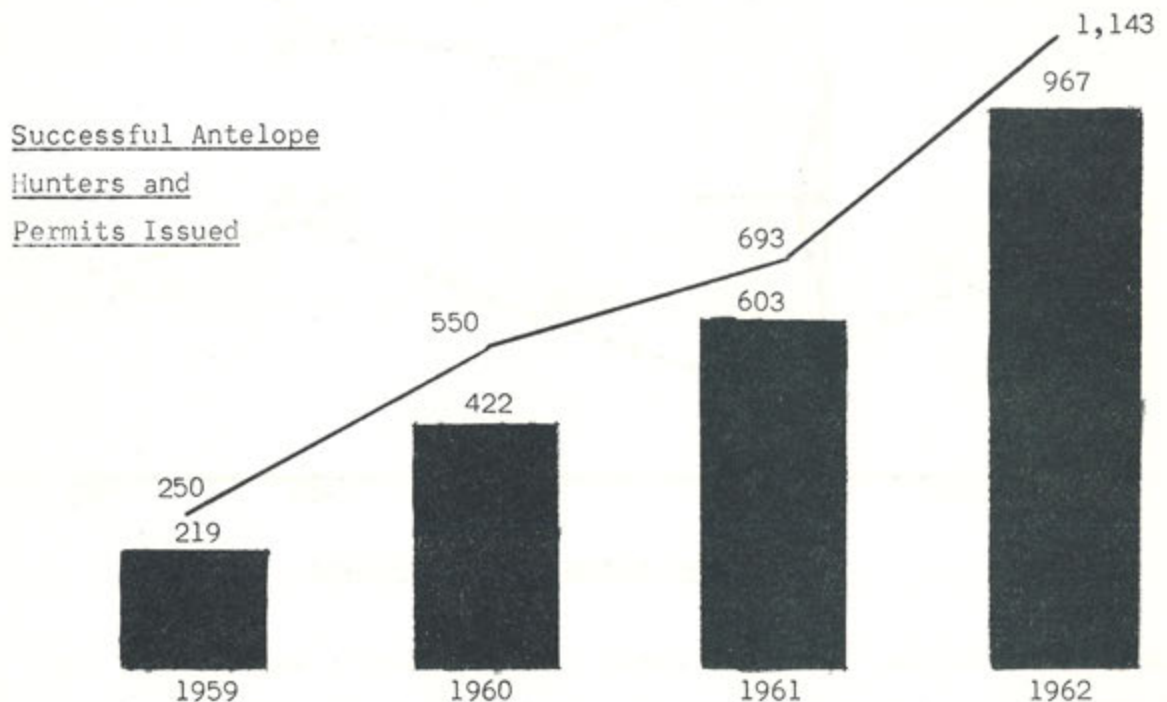

hunters took part in the season and as a result the 1962 harvest was substantially reduced.

Antelope

Hunters took 967 antelope in Nebraska during 1962--for a phenomenal success ratio of 84.6 per cent. The hunter take and the number of permits issued (1,143) both constitute all-time records.

Trapping and transplanting operations were completed in 1962 with a total of 1,077 antelope released in the Sand Hills since 1958. Early in the year 78 pronghorns were released north of Thedford.

The fall population of antelope in western Nebraska was estimated at 3,590 animals--or approximately the same as the previous year. Over-all productivity was considerable better than previous years. Kid-doe ratios observed during aerial surveys were 75:100 as compared to 62:100 in 1961.

Deer

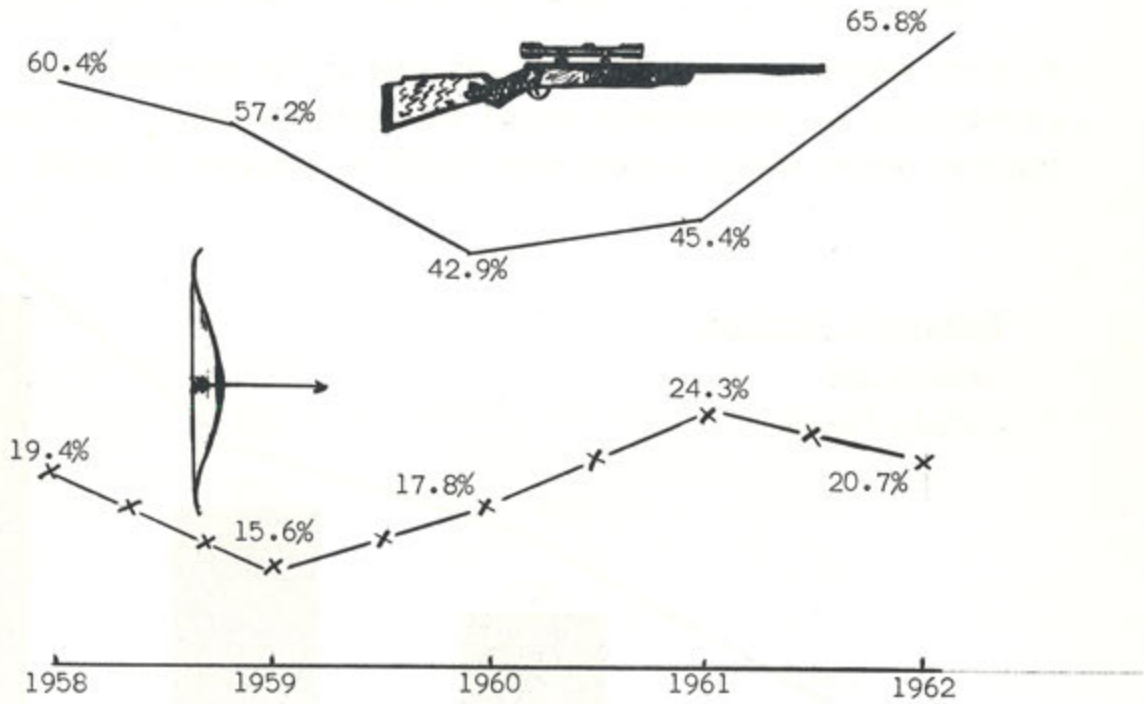

A record number of 8,853 deer were taken by rifle hunters in Nebraska during the 1962 season. The 13,460 deer permits sold for the nine-day season

also established a new mark, and the hunting success ratio of 65.8 per cent was one of the highest ever recorded in the state.

The entire state was open to deer hunting again in 1962, and deer were recorded killed in every county with the exception of Clay, Perkins, Wayne, and Fillmore.

For the first time the DeSoto Bend Wildlife Refuge was open to deer hunting. During the three-day season 239 hunters harvested 188 whitetails. The season was held because deer population on the refuge had increased above ideal maximum levels.

Deer archery season was open from September 15 through December 31, except during the nine-day rifle season, and was the longest archery

Deer Hunter Success Ratios

season in the nation. A record number of 1,536 permits were issued, and 316 archers bagged deer for a success ratio of 20.5 per cent--one of the highest in the nation.

Fallow deer continued to decline in the state. A total of 128 were counted in the vicinity of the Beaver Valley on the Hall and Mignery

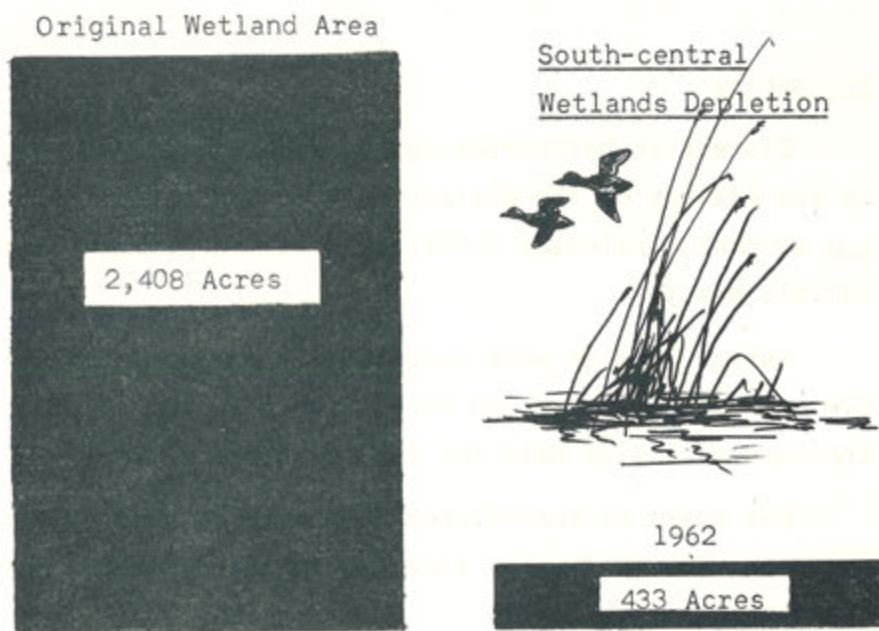

ranches. Previous counts at the same time of year revealed 139 in 1961 and 157 in 1960.

Fur Bearers

Trappers harvested 135,257 fur-bearing animals during the 1961-62 trapping season--or 18.7 per cent below the previous year. Muskrats comprised 73 per cent of the total harvest, raccoon 12 per cent, beaver 7 per cent, and mink 5.4 per cent. Of the 2,819 trapping permits sold, the calculated number of active trappers was 2,503.

Wetlands Survey

An inventory of Nebraska's wetlands continued during 1962. Work in the south-central basin area is about 95 per cent completed, and the Holt County section of the Sand Hills has been finished. The area covered to date in south-central Nebraska originally contained 2,408 water areas, but now contains only 433. Fifty-eight per cent of those original basins have been destroyed by drainage, and another 24 per cent by filling and leveling.

F I S H E R I E S

Management

The purpose of the fisheries management section is to study and manage the state's waters to improve fishing for Nebraska's anglers. This was accomplished in 1962 through manipulation of habitat, renovation of waters to rid them of undesirable rough fish, introduction of new game fish species, stocking of new waters with fish best suited for the area, and reducing fish populations in over-stocked waters.

During the year this section made preliminary renovation studies of the Snake River during construction of Merritt Dam, formulated management plans for parts of the Chain-O-Lakes along Interstate 80 and for the Salt-Wahoo system near Lincoln, conducted management surveys on the Little Blue River near the proposed Angus Dam, directed experiments on winter kill problems, and experimented in the hatcheries with the flathead catfish and Sacramento perch.

The Two Rivers "put and take" trout lake during 1962 experienced its greatest popularity since its beginning in 1960. During the open season from March 15 to November 30, a record 29,924 fishermen caught 92,578 trout, for an average of 3.1 fish per angler.

Hatcheries

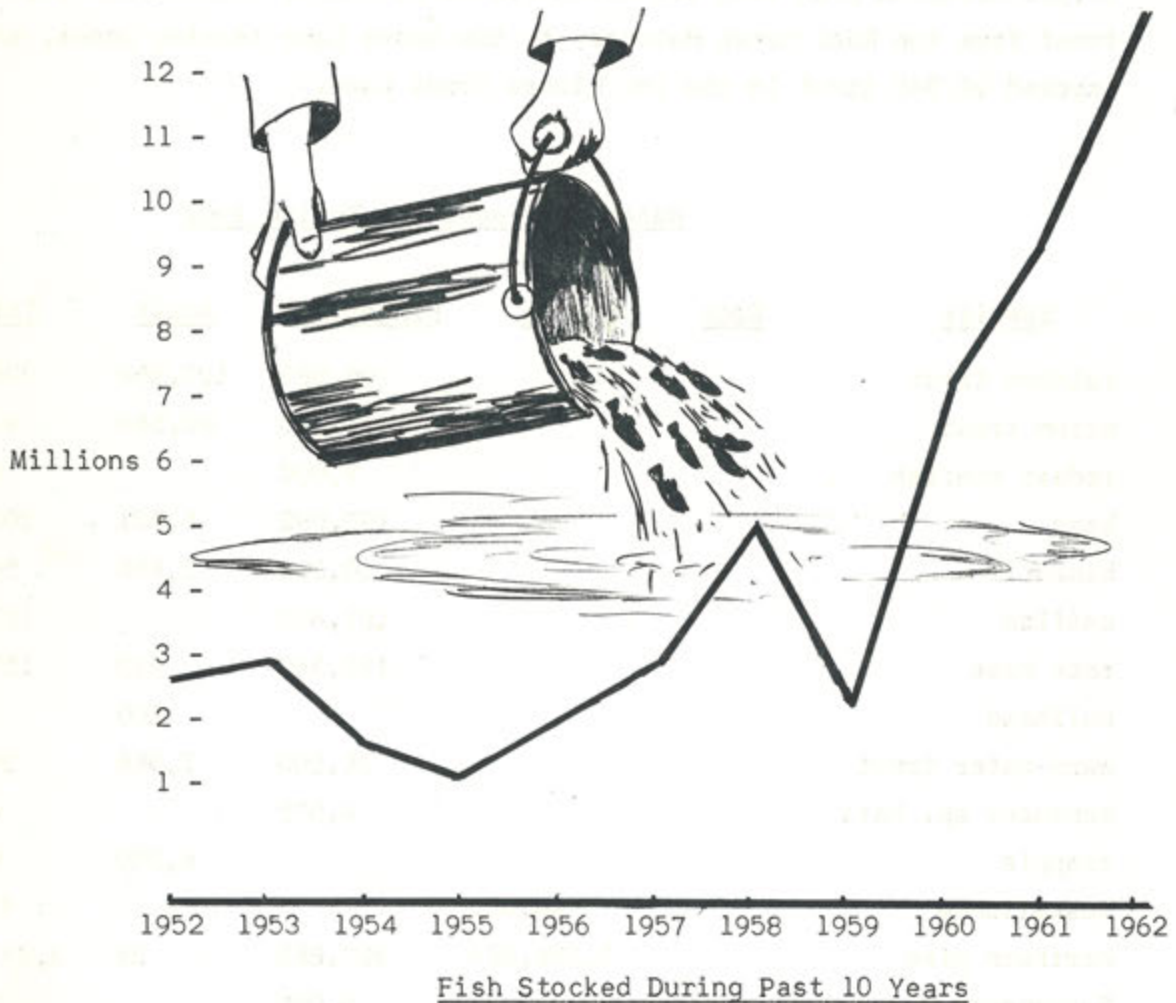

State fish hatcheries again established a production record unmatched in the history of the division. More than 11 million fish were reared and stocked, including 3,937,789 northern pike, 6,236,460 walleye, and 347,511 trout.

Redear sunfish were successfully produced for the first time at the Gretna Hatchery and 9,000 were stocked in the state's waters. Several thousand were also held for future hatchery use.

One quart of muskellunge eggs were hatched at the Valentine Hatchery, producing 40,000 fry for stocking in the renovated Wellfleet Lake south of North Platte.

Sacramento perch spawners that were held over in hatcheries when the species was introduced in 1961 produced the first fingerling of this fish

ever reared in Nebraska. Additional spawning fish were obtained for hatchery brood fish and for stocking the experimental lakes in the Sand Hills. Kentucky spotted bass held at the North Platte Hatchery produced 4,575 fingerlings that were experimentally stocked in the state's waters.

Salvage and Distribution

The fish salvage and distribution crew, headquartered at North Platte, contributed considerably during the year to the improvement of fishing in the state. Their efforts have centered mainly around seining, transporting, and stocking fish throughout the state's lakes, streams, and rivers.

During the year 59 lakes and 9 canals and rivers were seined from one to five times for the purpose of removing rough fish, obtaining game

fish spawners for hatcheries, obtaining surplus fish for stocking other water, and salvaging fish that would otherwise be killed by construction work or depletion of water.

The crew also stocked 64,376 channel catfish, 932,874 walleye, and 21,250 northern pike from the North Platte hatchery, transferred 19,975 trout from the Rock Creek Hatchery to the Grove Lake rearing ponds, and stocked 28,948 trout in the Two Rivers Trout Lake.

Hatchery Production During 1962

<u>Species</u>	<u>Eggs</u>	<u>Fry</u>	<u>Fingerling</u>	<u>Adult</u>	<u>Total</u>
rainbow trout			96,587	129,554	226,141

R E S E A R C H

The new research section was initiated in 1962 in an effort to permit researchers to be free from other assignments and to facilitate the employment of persons having more specialized interests and training. Studies of an intensive nature are undertaken to learn in depth the relationships that game and fish species have with their environments.

Game Research

Two projects were continued during the year to study the life history and ecology of pheasants and the two native prairie grouse species in the state. Along with much background data, the pheasant study revealed that there is consistently a surplus of hens, and that pheasant numbers are limited not by the winter environment but by the amount and quality of summer or nesting cover. The study also proved that the presence of newly hatched chicks can cause an incubating hen to abandon her nest. It appears that this phenomenon may be a natural regulator of the population level.

Prairie grouse research in the Sand Hills is to determine the precise parts of the environment responsible for fluctuations in grouse numbers. Since it is likely that the quality of vegetation is a critical factor, a system was refined and tested to measure the prairie cover in the areas where these birds are found.

Fisheries Research

One research project was completed in 1962, another initiated, and three others continued from the preceding year. A manuscript titled "A History of Nebraska Fisheries Resources" was completed for publication. This report presents the historical and present-day distribution of each fish species and a summary of native and exotic fish that have been stocked in each stream and lake in the state.

A new project started during the year will study the feasibility of developing a radio transmitter to be used to follow the movements of fish in lakes and rivers. Other projects include a study concerned with stream inventories and investigations, a study of farm fish pond stocking operations, and the distribution of animals without backbones in some Sand Hills lakes.

F E D E R A L - A I D

Federal-aid in fish and wildlife conservation is a major tool by which hunters and fishermen finance game and fish restoration projects by paying excise taxes on fishing and hunting equipment. The federal treasury collects the taxes which are apportioned to the states and territories according to a prescribed formula. The general types of projects that can be undertaken are also prescribed. The state plans each project, conducts the work at state expense, and is then reimbursed up to 75 per cent of the cost from Federal-aid funds.

In 1962, \$257,835.74 was made available for wildlife restoration work and \$80,604.92 for fisheries restoration projects in Nebraska. Any of this money not obligated within two years reverts back to the federal migratory bird fund. Expenditures during 1962 were for development of existing areas, trapping and transplanting operations, management surveys, and game and fish research.

Development:

Sacramento Wildlife Management Area	\$18,519.40	
Plattsmouth Waterfowl Management Area	57,568.87	
Habitat Restoration	65,888.87	
Transplanting Antelope and Turkeys	3,189.35	
Keith-Garden Goose Management Area	<u>6,249.82</u>	
		\$151,416.31

Game Management:

Wildlife Surveys, etc.	<u>\$94,234.99</u>	
		94,234.99

		<u>14,564.86</u>

<u>Total</u>		\$312,655.53
--------------	--	--------------

P A R K S

Records fell in many categories in the parks division during 1962. Visitations at all areas totaled about 4 million compared to an estimated 3.9 million in 1961. Income records also were broken at many parks.

More important, perhaps, was the planning for a ten-year development program as directed and financed by Legislative Bill 208 passed in 1961. The bill provides a 30-mill levy for state park development for a period of

State Park Income

10 years. The Game Commission began receiving the first income from the new levy in December of this year.

Improvements were made at all major state parks during the year, and attendance was up at all except Niobrara, which suffered severe flood damage during the spring.

Historical Parks

Work on historical parks in 1962 was generally a stabilization or replacement program with the exception of Fort Kearny, which received new

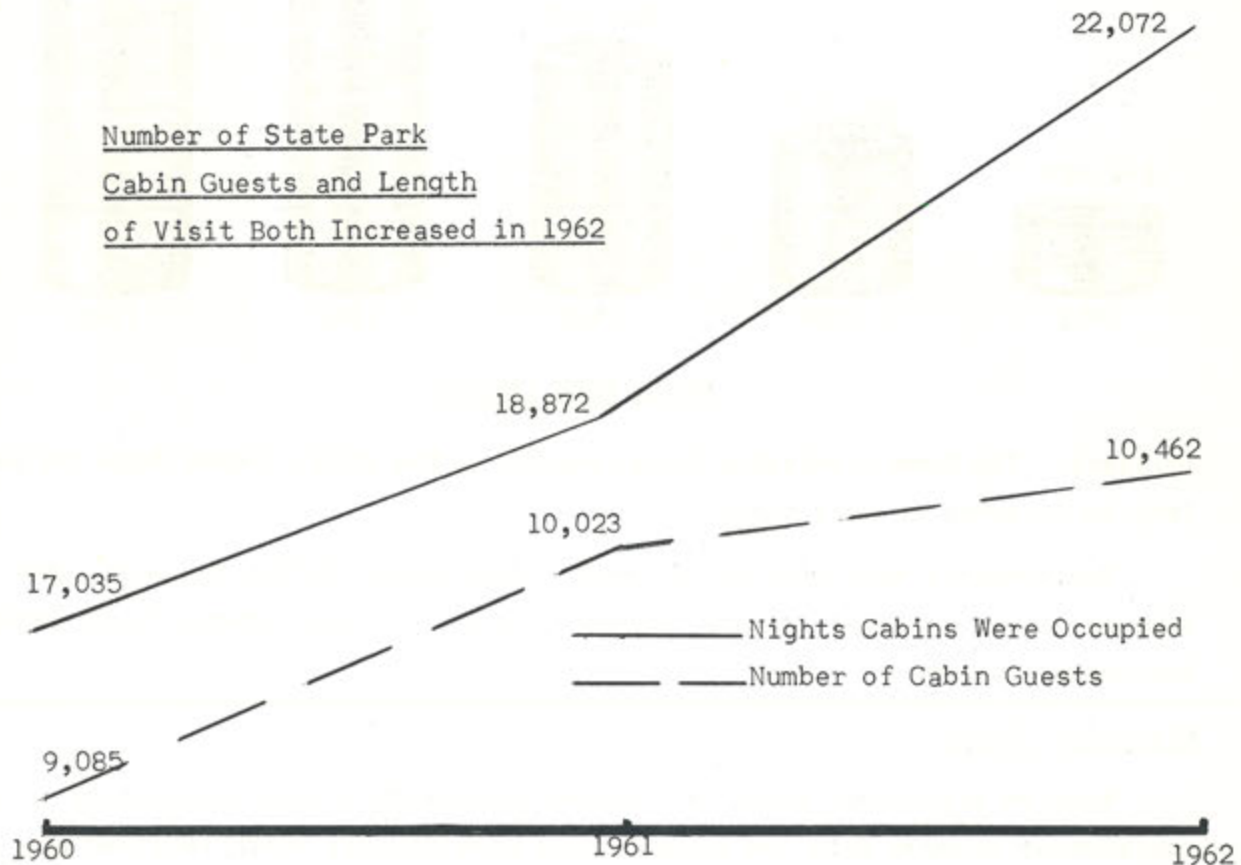

installations. Archeological studies continued at Ash Hollow, and an initial purchase of land was made in that area. Renovation work continued at Scouts Rest Ranch.

Recreation Areas

Visitations also increased at the various state recreation areas. At the Fremont area, one of the most popular areas of its type in the state, a boat ramp and dock was installed at Lake No. 20 and opened to boaters in July, a new entrance and parking lot was constructed at Victory Lake, and more picnic tables and fireplaces were added to the area's facilities. Fishing pressure also continued to climb at Two Rivers during its second year of operation.

Wayside Areas

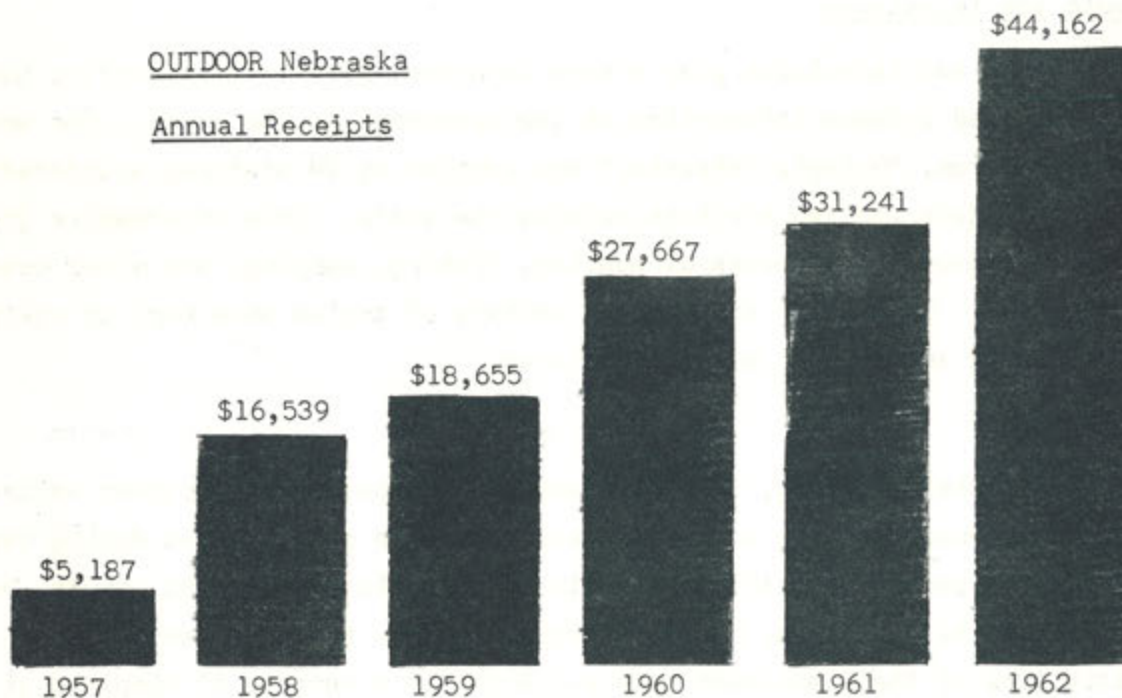

All of the state wayside areas experienced increased popularity during 1962. A new area will be constructed on property purchased during the year on U.S. Highway 136 east of Red Cloud. Other land for wayside areas was acquired along the route of U.S. Interstate 80 through central Nebraska.

I N F O R M A T I O N A N D T O U R I S M

Publications

The monthly magazine, "OUTDOOR Nebraska," was expanded during 1962 from a 28-page format to a 36-page book and the circulation was boosted to over 27,000 copies, even though the subscription rate was raised early in the year. The special vacation issue in June featured a fold-out cover and 40 pages of information about all outdoor recreation in the state. Other division publications included the annual hunting, fishing, and boating guides, a full-color hunting and fishing booklet for distribution at sports shows, the annual report, and other informative literature pertaining to fish and game.

News Releases

The division's weekly news release, "Wildlife Notes," kept the state's hunters and fishermen informed of regulation changes, seasons, conditions of game and fish populations, the work of the Commission, and many other news-making events during 1962. This informative news package is sent every week to newspapers, wire services, radio and television stations, outdoor writers,

national and state publications, conservation agencies, and departmental personnel. Special releases during the hunting and fishing seasons informed sportsmen of up-to-the-minute hotspots, conditions, and other factors concerning their favorite sports.

Programs

Personal appearances of division personnel before youth, civic, church, and sportsmen's groups were utilized as an important method of conveying information on hunting, fishing, and other outdoor activities in the state. A variety of slides and several motion pictures were used including the new "NEBRASKALAND--where the West begins," a motion picture produced this year by the division. More than 5,000 persons were contacted on a personal basis in the 82 meetings attended during the year.

Radio and Television

Radio and television play a very important part in transmitting hunting, fishing, and outdoor information to the sportsmen in the state. The weekly radio program, "Outdoor Nebraska," was carried by 24 stations scattered over the state and two stations outside the state. This informative 15-minute program features all phases of hunting, fishing, camping, and other outdoor activities. Television shorts on a variety of topics were sent to stations in Nebraska and several bordering states.

Exhibits

Nebraska's hunting, fishing, camping, and outdoor recreation values were introduced to over a million people at nine sports shows during 1962. Commission personnel staffed exhibits at shows in Chicago, St. Louis, Des Moines, Wichita, Dallas, Omaha, Lincoln, and two shows in Kansas City. Activities of the Commission were presented in a variety of displays at the State Fair.

Tourism

The tourist program for NEBRASKALAND was an important part of this division's operation during 1962. The vital function of promoting the scenic, historical, and recreational potential of the state was advanced

by the distribution of informative literature to persons in every state in the nation and many foreign countries.

The tourist stations at Blair and the State Capitol Building were manned seven days a week through the summer months. Hostesses at these stations greeted thousands of visitors and gave them up-to-date information about touring the state.

During 1962, the division's 27-minute motion picture, "NEBRASKALand-- where the West begins," was completed. After its premier in the fall the several copies in the film library were booked solid into the following spring.

ENGINEERING AND OPERATIONS

The improvement and maintenance of the Game Commission's facilities occupied most of the time of the Engineering and Operations Division, although assistance was provided all divisions of the department.

Boating access facilities were added at Omadi Bend and Brownville on the Missouri River. These include boat ramps, parking areas, toilets, picnic tables, and drinking water sources.

Other activities include work on special use areas, state parks, recreation, and wayside sties. Of prime interest was renovation work on Scouts Rest Ranch, Buffalo Bill Cody's home near North Platte, and Fort Kearny Historical Park southeast of Kearney.

L A N D M A N A G E M E N T

Habitat

The constant change in game habitat, due to increased technology and urbanization, continues to stress management as the answer to maintaining wildlife resources. During 1962, youth groups established wildlife areas with tree, shrub, and seed stock from the Commission, but the replacement of habitat was not as fast as the destruction of good game habitat.

Division personnel worked through various state and federal agencies to encourage agricultural practices that would result in greater wildlife production. The administration of free hunting permits afforded opportunities to work directly with landowners in habitat management.

Youth

Programs, field trips, and demonstrations were held to acquaint youth with the principles of wildlife conservation. Organizations involved included the 4-H, F.F.A., and Boy Scouts. Major efforts were also expended through hunter safety programs in an effort to prevent hunting accidents.

Watersheds

During the year division personnel became involved in the Salt-Wahoo and other watershed projects. These areas are being managed to produce maximum hunting, fishing, and recreational opportunities. Impounding structures are being enlarged to create additional recreational water.

Special Use Areas

Special use multi-purpose areas scattered throughout the state include reservoirs, public hunting areas, and wildlife management units. Improvements during the year included boat docks, roads, parking lots, fences, bridges, fireplaces, water wells, and tree plantings.

Goose concentrations reached a peak of 18,000 at the Plattsmouth area and 6,000 at Lake McConaughy. An additional 7,000 acres of land was leased at McConaughy to enlarge the waterfowl management area, and irrigation pipe was installed at the Sacramento area to control water levels in the various lagoons. Agricultural lands in many refuge areas were leased and devoted to farming practices conducive to good game management.

L A W E N F O R C E M E N T

The Game Commission's law officers drove 1,579,341 miles while enforcing the state's game laws during 1962. They made 1,393 arrests and saw 1,379 of their arrests turned into convictions. Their 98.99 per cent conviction record reflects the high efficiency of the men.

The enforcement division employed six new officers during the year to fill vacancies created by transfers and resignations. The division now has a complement of 43 officers including one section chief, one chief pilot-communications officer, five district supervisors, one officer-pilot, and 35 area officers.

During 1962, the division took steps to improve its communications network. A control and repeater station was set up at Bassett, and a repeater was installed east of Kennard. Plans were made to establish repeater installations in the southeast, northeast, and possible in the Gavins Point areas to further improve communications in those regions. Plans also were made for the standardization of communications procedures.

Conservation officers participated in 435 meetings of various civic, church, and service groups during the year, and took part in numerous sports and travel shows, fairs, radio, and television programs.

B O A T I N G

Nebraskans boated in record numbers in 1962 as 17,416 powered craft were registered in the state. The resulting funds from boating registrations were used for boating improvements and law enforcement. Boating accidents also increased with 27 mishaps compared to 17 in 1961.

Over 1,000 youngsters in high schools, junior high schools, and scout troops over the state received a nine-hour boating course and were awarded the National Red Cross basic boating certificate. The boating supervisor also conducted boating courses at various 4-H and rural youth camps around the state.

Publicity on boating and boating safety has been spread through radio, television, newspapers, and through the Game Commission's magazine, "OUTDOOR Nebraska". A copy of the "Guide to NEBRASKALAND Boating" is sent to all boat owners with their registration certificates.
