Abstract

What are the differences of being "left-brain" dominant and "right-brain" dominant. Would being one or the other make public education easier for some? That's the answer that is being sought after. This is important because it can help prove to people that the way we do public education now isn't good for everyone.

Key Points

- I learned that being dominant on one side of the brain does make a difference in the way that you learn
- Left brain is more a critical and reasoning thinker while the right brain makes you more of an artsy, creative thinker
- Public education systems are set up in a way that helps left brain dominance

Dalstra, R. (2011, February 22). Mercedes-Benz: Left Right Brain. Retrieved from <http://creativecriminals.com/print/mercedes/left-right-brain>

Conclusion

I would agree with the research I found because of the way I see people in my school struggle. I would say that the majority of the time, the people I see struggle the most are the people that are more into music or art. Not all of them are, but I would say the majority. I think what should be done is the future is to try to find a direct correlation since I didn't find one in my research. I would like to do something like this on my own with my peers. I think this would really help people understand the difference.
