# 2016 Nebraska Farm Custom Rates — Part I

Roger K. Wilson, Farm Management Analyst  
Jim A. Jansen, Extension Educator

Every two years a survey of custom operators is conducted to determine the current rates charged for specific machinery operations. The survey is divided into two parts. Part I includes the spring and summer operations such as planting and harvesting of small grains, and Part II includes information about fall and miscellaneous operations.

The responses are grouped by Nebraska Agricultural Statistics Districts as shown on the map below (Figure 1). Custom rates reported include charges for use of necessary equipment, fuel, labor, and supplies such as baling wire or twine provided by

the custom operator. Seed, fertilizer, and chemical costs are not included.

This report is based on a survey of custom operators identified by University of Nebraska–Lincoln Extension personnel. Questionnaires were sent to all individuals on this custom operators mailing list. The results reflect the views of those who responded to the specific questions. Actual rates paid for custom services may vary from those reported due to differences in those responding and those providing the service.

The **Number Reporting** is the number of usable responses received for a specific operation. The results from operations with more responses are considered to be more reliable than those with fewer responses. Results are not reported if fewer than three (3) usable responses were reported for an operation.

The **Average Rate** for a specific operation provides an estimate of the prevailing charge with its reliability improving as the number of responses increases.

The **Most Common Rate (Mode)** is the rate reported more often than any other for that practice. The Average Rate and the Most Common Rate are usually similar. An operation does not have a Most Common Rate entered when any value fails to be reported more than once.

The **Range** shows the minimum and the maximum amounts reported. These values may be indicative of different conditions under which the work was performed. The range also may reflect the fact that some rates include travel to and from the field while others do not.

The rates do not necessarily measure the full economic cost of performing the work specified. Some custom operators may only charge for fuel and labor. Other operators may charge for all costs, including depreciation on equipment, a charge for risk, and a return to management. Field conditions such as size, terrain, and location vary, which will account for some of the range in the rates charged.

The information presented in this publication should be used only as a guide. Rates change from year to year due to cost changes and the availability of custom operators. For example, the rates reported in this publication were the prevailing rates in the spring of 2016. In determining the rates for 2017, custom operators and farm owners should consider changes in the cost of machinery, labor, and fuel.

The following is an example showing how custom rates may be adjusted as fuel prices change. In this example, if the farm price for diesel increases fifty cents, from \$1.50 to \$2.00 per gallon, and the consumption rate is 0.80 gallons per acre, estimated cost increases due to the higher fuel prices would be  $\$0.50 \times 0.80 = \$0.40$ . This price then can be added to the custom rate quoted here.
