[Book review]

Summaries of Studies in Agricultural Education, 1965-1967 compiled by the Research Committee, Agricultural Education Division, American Vocational Association, Danville, Illinois: Interstate Printers and Publishers, 1970. 238 pp., \$4.00.

This is the second volume in the summaries of studies in agricultural education under the sponsorship of the American Association of Teacher Educators in Agriculture, and continues the publication of abstracts or research in agricultural education.

The criteria used by the Research Committee for selecting studies to be included were: (1) contributed to the solution of problems in agricultural education; (2) employed an adequate design, used appropriate procedures, and involved sufficient data which were effectively summarized and resulted in justifiable conclusions; (3) have been published in a professional journal, are available for loan from a university library, or are available from a state department of education; and, (4) reported staff research or research submitted as a thesis or dissertation for a graduate degree.

This publication includes abstracts of studies numbered 3400 to 3672, and are indexed by abstract number. The outline of each abstract enables the reader to identify the purpose, method, and findings easily.

With the rapid changes taking place in vocational education programs in agriculture at elementary, secondary, postsecondary, and adult levels, educators and researchers have in this publication an excellent source for identifying the systematic research completed in agricultural education during the two-year period 1965-1967.
