Replacement Name for *Euchitonia* Kolbe, 1894 (Coleoptera: Cerambycidae: Cerambycinae: Callichromatini)

Euchitonia Kolbe, 1894, (Coleoptera: Cerambycidae) is a junior homonym of *Euchitonia* Ehrenberg, 1861, (Protozoa). *Euchitonia* Kolbe consists of four, large, uncommon species known from peninsular Malaysia, Sumatra, Borneo, and Java. Podaný (1968) revised *Euchitonia* Kolbe, but omitted *E. menzelii* Ritsema. Subsequently, Hayashi (1978) synonymized *E. malayana* Podaný under *E. menzelii* Ritsema. More recently, Hüdepohl (1983) described *E. constanzae* but questionably placed it in the genus. *Huedepohlina*, *nomen novum*, is proposed to replace *Euchitonia* Kolbe. The following new combinations are created: *Huedepohlina constanzae* (Hüdepohl), *H. menzelii* (Ritsema), *H. superba* (Aurivillius), *H. suspecta* (Ritsema). The new generic name honors Dr. Karl-Ernst Hüdepohl for his contributions to the knowledge of tropical Cerambycidae. The following is a summary for this genus.

Huedepohlina, *nomen novum* (type species: *Zonopterus suspectus* Ritsema, 1885)
