This Article is brought to you for free and open access by the Nebraska Ornithologists' Union at DigitalCommons@University of Nebraska - Lincoln. It has been accepted for inclusion in Nebraska Bird Review by an authorized administrator of DigitalCommons@University of Nebraska - Lincoln.

Cedar Waxwing nests, reported by Alice Kenitz, represent the first positive record of this species nesting in Morrill County. Some feeding behavior of adults with young was observed several years ago, but no nests were located at that time.

Anyone who sees evidence of nesting — young, or adult birds carrying nesting material, food, or fecal sacs — can submit the information without the use of a special form, although it will be appreciated if the information is in such form that it can be easily separated by species and county. This information will be included in the Nebraska Nesting Survey by letters rather than numbers.

Anyone who has found, or expects to find, an active nest is invited to write for North American Nest Record Cards to use in reporting the nest. Each nest requires a separate card, except for colonial nesting species, which require a separate card for each visit to the site.

Cards, instruction sheets, and Laboratory of Ornithology Nest Survey Newsletters may be obtained from Dr. Esther V. Bennett, 1641 Devoe Drive, Lincoln, Nebraska 68506.
