Three hundred and four species were recorded in this report, from 22 locations, compared to 296 from 22 locations in 1985, 293 from 13 in 1984, and 288 from 13 in 1983. The numbered columns are essentially spot checks (a one or two day visit to an area, or maybe more than one such visit) or unusual birds reported by visitors to the areas. The symbols used in these columns run from a,

grove 4 mi. N. and 2 mi. E. of Dixon. They got a good look at it, with the light behind them, as it hopped around the cedar trees, feeding on insects. All the bird's characteristics were very evident: a red cap, yellow by the eye and on the throat, light streaking on the side, and yellow under-tail coverts. It is the first time any of them had seen this species.

8. Saunders, 66 species, j = My 10, m = My 31, both Tanya Bray and Barb Wilson; m = Je 14, and z = - S (Jl 26), both by R. G. Cortelyou and Alice Rushion.

9. Cass, Nemaha, and Richardson, 101 species. a = Fe 22, Cass, Ruth

W - S indicates much the same thing as - S, but is used in cases for which the pattern is not always true.
 x is used instead of a date when the specific date is not given.
 * to indicate a comment in the locality comments.
 Other symbols are explained in the locality comments.
 Two dates indicate the first and last records for that location. The information is presented in a rough west (left) to east (right) order, with locations of about the same longitude presented in a north to south order. The number of species reported, the names of reporters (and of other observers)

Dakota, South Sioux City, 184 + (4) species, Bill Huser, reporter. Kurt Dean, Teri Dolezal, Bob LorRayne, Wayne Livermore, Jerry Probst, Dave Stage, Dawes, Crawford, 54 species, Jim Minyard, reporter, plus observations about Je 15 made by Mark Brogie and Bill Huser in Sowbelly Canyon (Western Flycatcher) and Chadron State Park. The Lesser Goldfinch had a black back and top of head, white wingbars, yellow throat, breast, and underparts. It was with a flock of American Goldfinches, which came to the Minyards' bird pond. This is the second out of the last five years that they have seen the bird. The only prior report of Lesser Goldfinch in Nebraska was for 20

B. C. Lavelle, and Rick Wright, observers. The Golden-winged Warbler and the Lazuli Bunting were singing males. Lincoln, North Platte, 172 + (4) species, Mrs. A. B. Gunlicks, reporter, all attendees at the Annual Meeting, observers. During the meeting Mrs. Ruth Green banded a female Tennessee Warbler at the Fish Hatchery. The bird had a very active brood patch. Within two hours she had netted the bird a second time. It was flying in and out of a dense hedgerow composed primarily of Russian olives and many other species of shrubs and trees. She also observed a singing male in the hedgerow. She believes it is very possible

Co. records by Mark and Ellen Brogie. They had Evening Grosbeaks at their feeder this winter, saw Sandhill Cranes over Creighton Ap 1, and Eastern and Say's Phoebes in Knox Co. on that day. "A" marks records in Antelope Co. The Sprague's Pipit was observed singing on Ap 20 and 21 by Mr. Marsh, of Brunswick, Antelope Co. On Ja 11 the Brogies saw two Killdeer at Grove Lake. They were sitting on the ice at the south side of the lake, next to a small patch of open water caused by the "trout stream" feeding into the lake. They also saw a Field Sparrow, in the company of a flock of American Tree Sparrows frequenting an overgrown cedar shelterbelt. The

bright pink bill, white eye ring, and white wing bars were clearly seen. The K entries are Knox Co. items by Mr. Erickson, except that the Rough-legged Hawk was seen Ja 22. The Merlin's (a male) falcon profile was diagnostic. It was light blue on the back and had a heavily streaked breast, which was very light in color. The tail was barred and tipped in white, the head was light colored, with a faint mustachial streak. The light coloration of the black wing tips and tail markings made him believe it was the pale *richardsonii?* form.

The Saw-whet Owl called from a spruce tree outside his yard, with the continuous too-too-too call lasting over 3 minutes. Purple Finches, Common Redpolls, Pine Siskins, and Evening Grosbeaks were still in Knox Co. in good numbers on Fe 27.

Polk, Polk, 145 + (1) species, plus the possibility that the one of the Empidonax sp. was one not listed, Norris Alfred, reporter, Mike Bello, Larry Cooper, Larry Einemann, Lennis Lind, Donna Loschen, Louise Merchant, and Lee, Shirley, and Steve Morris, observers. Ross' Geese were rumored to be in with the Snows, but none were located. Wood Ducks were reported to have been there 3 weeks before the date given. Before Mr 10 one observer saw a bird that might have been a Mississippi Kite but it was not positively identified. A dead Sharp-shin was found on a road My 25. The Lapland Longspur was also found dead. Mr. Morris hadn't seen an Olive-sided Flycatcher or a Lark Bunting in the area for years. (Spring of 1979 is the last time an Olive-sided Flycatcher was listed on the Spring Occurrence Report from a location west of Lancaster Co., and it is even before that that it wasn't reported from Sarpy Co.) A Rufous-sided Towhee and a Cowbird were seen Ja 1.

Sarpy, see Douglas.

Scotts Bluff, Gering, 150 + (2) species, Alice Kenitz, reporter, Dorothy Adcock, Lydia Bolz, Joyce Brashear, Mark Heisinger, Nora Mae Vance, observers. The Cassin's Kingbird was seen in Banner Co. on a Bird Atlas survey. The Eastern Bluebirds were nesting in a box set out for Mountain Bluebirds. Grasshopper Sparrows were numerous, and after hearing them so much this year Mrs. Kenitz thinks she has heard them in the Buffalo Creek Wildlife Area for years without recognizing them. A Gray-headed Junco was seen Mr 15, and the one seen My 18 may also have been one, but the identification isn't sure. The Western Flycatcher was seen by Joyce Brashear in her yard in Scottsbluff. It was on a wire and she saw its eye ring, wing bars, and yellow underside. The size was right. She was very close to the bird and was able to study it for quite a long time.

Sioux, Mitchell, 107 + (25) species, Helen and David Hughson, reporters, Mark Brogie, Bill Huser, and Doug Thomas, observers. The Hughsons live in southern Sioux Co., but their mail is delivered through Mitchell. Mr. Brogie and Mr. Huser made observations in the county in mid-June (shown as Je 15); Mr. Thomas made observations at Agate National Monument on Je 21.
