The Nebraska Forestry Program

Distributed in furtherance of cooperative agricultural extension work. Acts of May 8, 1914, and June 30, 1914. The University of Nebraska Agricultural College and U. S. Department of Agriculture cooperating. W. H. Brokaw, Director of Agricultural Extension Service. (4-27-10M)

C. W. Watkins, who was talking to the boys and
ture was taken, is now Nebraska's Extension For
work.

214,000 seedling trees have been distributed in Nebraska in the last two years to farmers who have planted them in shelter belts and wood lots. Under provisions of the Clarke-McNary Act of Congress, these seedlings have been distributed at the cost of handling them, approximately one cent each. The project has made a healthy growth in its first two years. It is hoped that it can be expanded until 1,000,000 trees are being distributed to farmers each year.

The Future of Forestry

Benefits from planting trees in Nebraska today will be measured by the way the boys and girls grow up with the trees.

If they learn to love trees as living things, appreciate their value, protect them, and then grow more of them, the future of Forestry in this state will be left in safe hands.

Forestry clubs for the boys and girls will be in the program of the agricultural extension service next year. Will your boy and girl be in one of them?

Nebraska people should be concerned not only with the growth of trees but also with the protection of them. Forest fires destroy much wealth of this country, and when trees burn, everyone loses.

The first page of this circular pictures peace and solid comfort among the trees, the last page terrible destruction. *Which will you encourage as a camper in some National forest, as a lover of natural life, a consumer of wood products, and as a citizen of this state and nation?*
