This circular deals principally with herbicides as an aid for crop production. The suggestions for use are based on results at Nebraska research stations and elsewhere. Reference to commercial products or trade names is made with the understanding that no discrimination is intended and no endorsement by the Cooperative Extension Service is implied.

DO NOT USE 2,4-D ESTER, BANVEL (DICAMBA), AND SIMILAR HERBICIDES NEAR VEGETABLES, ORNAMENTALS, TREES, SHRUBS, AND BROADLEAF CROPS.

Genetic strains, varieties, and hybrids vary in their response to herbicides. Check with your seed dealer for information on the crop you plan to treat.

Extension work in "Agriculture, Home Economics and subjects relating thereto," The Cooperative Extension Service, Institute of Agriculture and Natural Resources, University of Nebraska-Lincoln, Cooperating with the Counties and the U. S. Department of Agriculture
Leo E. Lucas, Director

RESTRICTED USE HERBICIDES
... Tordon and Paraquat have been classified as restricted use herbicides by EPA. Other herbicides or some of their uses may be classified as restricted use at some future date. The label will indicate if a product is restricted use. *Only certified private or commercial applicators should apply or supervise the application of restricted use herbicides.* See your County Extension Agent if you need to be certified.

"Use Crop Production
Chemicals Wisely"

● READ THE LABEL BEFORE EACH USE. Follow instructions; heed all cautions and warnings.

● APPLY ONLY AS DIRECTED. Federal law authorizes seizure of any raw agricultural commodity moving in interstate commerce which carries a pesticide residue in excess of the established tolerance.

● STORE IN ORIGINAL, LABELED CONTAINERS. Keep out of reach of children, pets, livestock and irresponsible people.

● ELIMINATE HAZARDS FROM CONTAINER. Rinse empties that contained liquids three times. Burn paper bags and fiber drums. Stay out of the smoke. Bury unused materials and crushed containers.

WEED RESPONSE TO SELECTED PREPLANT AND PREEMERGENCE HERBICIDES

Plant response may be altered by growing conditions, genetic variation in crops and weeds, soil type, pH, organic matter and rates of application. Ratings may vary from season to season and geographical areas within the state.

Response ratings:
E=Excellent
G=Good
F=Fair
P=Poor

¹Crop varieties vary in their response to herbicides.

²The lower number applies to eastern Nebraska, the larger number to western Nebraska. Values will vary with soil and rainfall or irrigation. For more information see "Herbicide Carryover," G74-180.

FIELD CROPS--PREPLANT INCORPORATED (PPI) AND PREEMERGENCE (PRE)

Band applications reduce total herbicide used.

Preplant treatments are made before planting the crop. Preemergence treatments are applied from planting time to just before plant emergence. Postemergence treatments are applied after emergence of weeds or crop. Weed control with preemergence treatments may be poor if there is no rain to leach the herbicide into the top inch. To overcome dependence on rainfall and to increase dependability some preemergence herbicides may be incorporated into the surface soil with a suitable implement. Excessive rainfall may leach some of the more soluble herbicides into the subsoil, especially on sandy soils. Weed control with preemergence herbicides is more satisfactory on

surface-planted crops and when applied to prepared seedbeds free of clods, trash, and weeds.

Some weed species are resistant to particular herbicides. Herbicides should be rotated to control a wider spectrum of weeds and to reduce the build-up of any particular herbicide in the soil. *If you use atrazine plant only corn or sorghum the following year--it may carry over and injure alfalfa, beans, potatoes, sugar beets, and small grains.* Herbicide residue problems in soils increase as one goes westward in Nebraska.

Sprayers should provide good agitation of spray solution and be equipped with 50-mesh or coarser screens to avoid clogging with wettable powders.

Herbicide (See weed response chart and troublesome weed section before selecting herbicide)	Apply this amount of commercial product per acre (per hectare)			Application time, Remarks, and Approximate Cost/A ³
	Sandy Loam <1½%OM	Silt Loam 1½-2½%	Silty-Clay Loam >2½%OM	
CORN

¹Crop varieties vary in their response to herbicides.

²The lower number applies to eastern Nebraska, the larger number to western Nebraska. Values will vary with soil and rainfall or irrigation. For more information see "Herbicide Carryover," G74-180.

⁵For more information see "Annual Broadleaf Weed Control in Winter Wheat," G74-120.

*Basagran gives good control of hairy nightshade but not black nightshade.

FIELD CROPS POSTEMERGENCE

Excellent growing conditions make weeds more susceptible to postemergence herbicides. Likewise, crops may be more subject to herbicide damage when growing rapidly. *Adjust herbicide dosages downward* when excellent conditions for growth are present the week before application and *upward* when ideal growth is limited by one or more factors.

Crop	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A ³
BARLEY AND SPRING WHEAT	2,4-D amine	1-1.5 pt 1.2-1.7 ℓ	5-leaf thru tillering	Do not treat winter barley in the fall. Spray broadleaf weeds as soon as good growing conditions occur in the spring. See page 23 for wild buckwheat control. Approx. cost \$.50 to \$1.00.
	2,4-D LV ester	0.5-1 pt 0.6-1.2 ℓ		
CORN	AAtrex/Atrazine 80W or AAtrex/Atrazine 4L	2.5 lb 2.8 kg 2 qt 4.7 ℓ	Grass weeds 1" (2.5 cm) or less; also at layby	Use with water-oil mixtures. Read product label. Lower rates control broadleaf weeds. Make layby applications when corn is 20-30" tall and weeds less than 1½" tall. Approx. cost \$4.40.
	2,4-D amine	1-2 pt 1.2-2.3 ℓ	Before corn is 8" (20 cm) high, over 8" (20 cm) use drop nozzles	Later applications may cause brittleness and stalk breakage. Use lower rate when good growing conditions exist to reduce corn injury. Do not use Banvel within ½ mile (0.8 km) of sugarbeets, fieldbeans, alfalfa, soybeans, gardens and ornamentals unless drop nozzles are used on corn over 8" (20 cm). Do not treat corn over 24" (60 cm). Do not apply between June 20 and Sept. 1 if sensitive crops are nearby. Approx. cost \$.50 to \$1.90.
	2,4-D LV ester	0.5-1 pt 0.6-1.2 ℓ		
	2,4-D amine +	0.5 pt 0.6 ℓ +		
	Banvel (4WS)	0.25 pt 0.3 ℓ		
	Banvel (4WS)	0.5 pt 0.6 ℓ	Before corn is 24" (60 cm) high	
	Lasso (4EC)	2-3 qt 4.7-7.0 ℓ	Layby before corn is 40" (100 cm) tall	Apply after furrowing or final cultivation. Weeds less than 1½" tall may be controlled with Lasso-Atrazine combination. Approx. cost: Lasso \$7.00 to \$10.50; Lasso + Atrazine \$9.50 to \$14.50.
	Lasso (4EC) +	2-3 qt 4.7-7.0 ℓ +		
	Atrazine 4L	1-1.6 qt 1.2-1.9 ℓ		
	2,4-D LV ester (harvest aid)	1.5 qt 3.5 ℓ	After silks brown	Rescue operation for late control of sunflowers, cockleburrs, velvet-leaf and other late broadleaf weeds. Brittleness and kernel fill not affected if silks are dry and pollination is complete. Approx. cost \$2.70.
FIELDBEANS	Basagran (4WS)	0.75-1 qt 1.8-2.3 ℓ	At least one trifoliate leaf fully expanded	Apply before weeds are 6" tall. Weeds showing moisture stress or over 6" tall are poorly controlled. Controls hairy nightshade but not black nightshade. Approx. cost \$9.75 to \$13.00.
OATS	Brominal or Buctril (2EC) +	1.5 pt 1.8 ℓ +	Weeds and oats in 3 to 4 leaf stage	Controls only annual broadleaf weeds. Approx. cost \$6.00.
	2,4-D amine	0.5 pt 0.6 ℓ		
	2,4-D amine	1 pt 1.2 ℓ	3 to 4 leaf stage of oats	Some injury from 2,4-D may be expected at any stage. See page 23 for wild buckwheat control. Approx. cost \$.75.
POTATOES	Sencor/Lexone 50W	0.5-1 lb 0.6-1.1 kg	Before weeds are 1" (2.5 cm) tall	Use higher rate for sunflowers and kochia. Do not use on red skinned or early maturing white varieties nor within 60 days of harvest. Approx. cost \$3.35 to \$6.75.

(Continued next page)

FIELD CROPS POSTEMERGENCE-- (CONTINUED)

Crop	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A ³
SORGHUM	AAtrex/Atrazine 80W or AAtrex/Atrazine 4L	1.5 lb 1.7 kg 1.2 qt 2.8 ℓ	Broadleaf weeds less than 6" (15 cm)	Use with water-oil mixtures. Read product label. May give partial control of grass weeds under 1" (2.5 cm). Approx. cost \$2.65.
	2,4-D amine	1 pt 1.2 ℓ	When sorghum is 4" (10 cm) to 12" (30 cm) high. Over 12" (30 cm) use drop nozzles.	Spraying before 4" (10 cm) stage may inhibit root development. Spraying without drop nozzles after 12" (30 cm) through early boot may inhibit head development. Approx. cost \$.50.
	2,4-D LV ester	0.5 pt 0.6 ℓ		
	2,4-D LV ester (harvest aid)	1 qt 2.3 ℓ	After soft dough	Rescue operation for late control of sunflowers, cocklebur, velvet-leaf and pigweed. Grain quality not affected if milo is in soft dough or later stage of growth. Approx. cost \$1.75.
SOYBEANS	Basagran (4WS)	0.75-1 qt 1.8-2.3 ℓ	Before susceptible weeds are 6" (15 cm) tall	Good spray coverage essential. Lower rate on smaller weeds. Use 1 qt/A (2.3 ℓ/ha) on velvetleaf 2" to 5" (5.0 to 13 cm) tall. Approx. cost \$9.75 to \$13.00.
	Paraquat (harvest aid)	0.5-1 pt 0.6-1.2 ℓ	½ leaf drop and remainder yellow	Follow label directions on water volume and X-77 additive. Approx. cost \$2.10 to \$4.25.
SUGARBEETS	Dowpon M (74SP)	2.7-5.4 lb 3.0-6.1 kg	Grass weeds less than 2" (5 cm) tall. Temp. above 60°F (16°C).	For annual grasses. Use higher rate [4 lb/A (4.4 kg/ha)] on grass taller than 2" (5 cm). May cause crop injury following Ro-Neet use. Approx. cost \$3.80 to \$7.60.
	Betanex (1.3EC)	4.5-7.5 pt 5.3-8.7 ℓ	Beets past 2 leaf stage and weeds in cotyledon to 4 leaf stage	Use lower rates on small beets. Works best on Ro-Neet treated fields. Wait till 5-6 leaf stage if beets show signs of Ro-Neet injury. Treat in late afternoon to reduce injury. Tank mix gives more effective kochia control. Approx. cost per inch width of treated band for 22" (55.9 cm) rows: Betanex--\$.95 to \$1.55; Betanex + Betanal--\$.75 to \$1.15.
	Betanex (1.3EC) + Betanal (1.3EC)	2-3 pt 2.3-3.5 ℓ + 2-3 pt 2.3-3.5 ℓ		
	2,4-D amine	1-1.5 pt 1.2-1.7 ℓ	Early spring before joint stage or late fall after tillering	Do not spray winter wheat until well tillered. Spray broadleaf weeds as soon as good growing conditions occur. Refer to pages 23 and 18 for wild buckwheat and blue mustard control. Approx. cost \$.50 to \$1.00.
	2,4-D LV ester	0.5-1 pt 0.6-1.2 ℓ		
WINTER WHEAT	2,4-D LV ester (harvest aid)	1.5 qt 3.5 ℓ	After dough stage and 7 or more days before harvest	Rescue operation for late weeds such as sunflowers, kochia, pigweed, and lambsquarters. Approx. cost \$2.70.

ADDITIONAL REGISTERED POSTEMERGENCE TREATMENTS:

Barley-Oats: MCPA, 2,4-D + Banvel.

Corn: Bladex 80W, Banvel + atrazine, Basagran, Dowpon M + 2,4-D directed, Evik directed, Lorox directed, Premerge in spike stage.

Sorghum: Banvel 10-25 days after emergence.

Soybeans: Butoxone/Butyrac, Dyanap/Klean Krop, Lasso + Premerge, Lorox directed, Lorox + Butyrac directed, Premerge, Premerge + Amiben, Tenoran.

Sugarbeets: Betanal, Endothal, Pyramid + Dowpon, TD 273.

Winter Wheat: Brominal + MCPA, MCPA, 2,4-D + Banvel, Tordon 22K + 2,4-D.

³Costs calculated for broadcast treatment using least expensive formulation listed.

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl because of fume hazards. 2,4-D, silvex, 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (0.45 kg/ℓ) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

REDUCED TILLAGE SYSTEMS

Try new farming techniques on a small scale before using on large acreages.

Situation	Herbicide and Rate per acre (per hectare)	Application time	Remarks and Approximate Cost/A ³
NO-TILL CORN IN GRASS SOD ⁷	AAtrex 4L 2 to 3 qt (4.7 to 7.0 l) + Paraquat 1 to 2 pt (1.2 to 2.3 l) ⁸	Apply to new growth in May before corn emergence	Weak on tall warm season perennial grasses. Add paraquat if weeds have emerged. Approx. cost \$9.25 to \$16.00.
NO-TILL CORN IN ALFALFA SOD ⁷	2,4-D amine 1 qt (2.3 l) + Banvel 0.5 pt (0.6 l)	Apply in Sept. or April-May to alfalfa with 3 to 4" (7.6 to 10.2 cm) new growth. Avoid tillage for 5 days	Will control alfalfa. For annual weed control select a preemergence herbicide from pages 3 - 5. See Neb-Guide G74-131 for more information. On sandy soils don't plant corn for 10 days. Approx. cost \$3.35.
NO-TILL CORN IN RYE OR WINTER WHEAT ⁷	AAtrex 4L 2 to 3 qt (4.7 to 7.0 l) + 1 to 2 pt (1.2 to 2.3 l) Paraquat CL ⁸	Apply when rye and wheat are more than 4" (10.2 cm) tall and before corn emerges.	Approx. cost \$9.25 to \$16.00.
NO-TILL CONTINUOUS CORN	AAtrex/Atrazine 4L 2 to 3 qt (4.7 to 7.0 l)	Preemergence	Control broadleaf weeds with 2,4-D LV ester prior to planting. Volunteer corn may be a problem. Tank mix 1 to 2 pt Paraquat ⁸ to control weeds present at planting. Do not use Bladex on soils below 1.5% OM. w/o Paraquat Approx. cost \$4.40 to \$12.00.
	AAtrex/Atrazine 80W 2.5 to 3.75 lb (2.8 to 4.2 kg)		
	Lasso + Atrazine 80W 2 qt + 2 lb (4.7 l + 2.2 kg)	Preemergence	
NO-TILL CONTINUOUS SORGHUM (PLANTED INTO PREVIOUS CROP RESIDUE)	Bladex 4L 3 to 4 qt (7.0 to 9.3 l)	Preemergence	Avoid long season hybrids. Reduce Atrazine rate after first year in SW Nebraska. Spray before barnyardgrass has 3 leaves. Approx. cost: Atrazine + Paraquat \$7.75 to \$13.75; Igran + Atrazine \$7.15 to \$8.95.
	Bladex 80W 3.75 to 5 lb (4.2 to 5.6 kg)		
	Atrazine 80W 2 to 3 lb (2.2 to 3.4 kg) + Paraquat CL ⁸ 1 to 2 pt (1.2 to 2.3 l)	Preemergence 2 weeks before planting	
NO-TILL CONTINUOUS SORGHUM (PLANTED INTO PREVIOUS CROP RESIDUE)	Igran 80W + AAtrex 80W 2 to 2.5 lb (2.2 to 2.8 kg) + 1.0 to 1.25 lb (1.1 to 1.4 kg)	Preemergence 2 weeks before planting	Avoid long season hybrids. Reduce Atrazine rate after first year in SW Nebraska. Spray before barnyardgrass has 3 leaves. Approx. cost: Atrazine + Paraquat \$7.75 to \$13.75; Igran + Atrazine \$7.15 to \$8.95.
NO-TILL SOYBEANS (PLANTED INTO PREVIOUS CROP RESIDUE)	Lasso 2 qt (4.7 l) + Sencor/Lexone 50W 0.75 lb (0.8 kg) + Paraquat CL ⁸ 1 to 2 pt (1.2 to 2.3 l)	Preemergence	Atrazine residue from previous crop could cause soybean injury. Approx. cost \$16.25 to \$20.50.
WHEAT-ECOFALLOW-WHEAT ⁹ WHEAT SEEDED 10-14 MONTHS LATER	AAtrex 4L 1 to 2 pt (1.2 to 2.3 l) Use lower rate on soils below 1% organic matter or on calcareous soils.	July to October 15	Add 1.5 qt/A (3.5 l/ha) 2,4-D ester to improve perennial broadleaf weed and grass control. Use sweep plow if grass weeds or volunteer wheat become a problem after spraying. Avoid canyon and rosebud soils and caliche outcroppings. w/o 2,4-D Approx. cost \$1.25 to \$2.50.
For use where stubble is weed- free after harvest. (Primarily in the Panhandle).	AAtrex 4L 1 to 2 pt (1.2 to 2.3 l) + Paraquat CL ⁸ 1 to 2 pt (1.2 to 2.3 l) ¹⁰	July to October 15	Spray before weeds produce seed. If grasses such as barnyardgrass or volunteer wheat recover use sweep plow before weed seed develops. Avoid canyon and rosebud soils and caliche outcroppings. Approx. cost \$5.50 to \$11.00.
For use where weeds are present in stubble after harvest.	Bladex 80W 3.5 to 4.5 lb (4.0 to 5.0 kg)	September-November	If volunteer wheat, downy brome or jointed goatgrass are present add Paraquat ⁸ + X77 at 1 pt/A (1.2 l/ha). Approx. cost \$7.90 to \$10.15.
Sweep plow wheat stubble after harvest.	Use higher rate on fine textured soils.		

(Continued next page)

³Cost calculated for broadcast treatment using least expensive formulation listed.

⁷Irrigated conditions or eastern Nebraska.

⁸Add X-77 spreader 1 to 2 pt (1.2 to 2.3 l) per 100 gal spray solution.

⁹For use west of highway 83. Consider herbicides used in a wheat-fallow rotation as fallow aids and resume stubble mulch tillage practices in May-August to control grasses and prepare a seedbed.

¹⁰Increase Paraquat rate, gallonage and pressure (minimum of 30 lb pressure at nozzle) on heavy infestations of grass or Russian thistle where it is difficult to penetrate the foliage.

REDUCED TILLAGE SYSTEMS--(CONTINUED)

Situation	Herbicide and Rate per acre (per hectare)	Application time	Remarks and Approximate Cost/A ³
WHEAT-ECOFALLOW-WHEAT ⁹ WHEAT SEEDED 4-5 MONTHS LATER	Bladex 80W 2.5 to 3.5 lb (2.8 to 4.0 kg) + Paraquat CL ⁸ 1 to 2 pt (1.2 to 2.3 L) Use higher rates on fine textured soils	March-April or before boot stage of weeds	Will control volunteer wheat, downy brome, jointed goatgrass and broad- leaf weeds when present. Approx. cost \$9.90 to \$16.40.
	Roundup 1 qt (2.3 L)	Postemergence-April	Apply to vigorous growing weeds such as volunteer wheat and downy brome. Has no preemergence activity. Do not mix with other herbicides. Approx. cost \$13.50.
	2,4-D 1 qt (2.3 L) + Banvel 0.5 pt (0.6 L)	May-August	Broadleaf weed control only. Approx. cost \$3.35.
WHEAT-ECOFALLOW-CORN OR SORGHUM Spray or sweep plow small grain stubble after harvest. Plant corn or sorghum following spring	AAtrex 4L 2 to 3 qt (4.7 to 7.0 L) Use higher rates on fine textured soils in July and August and on soils below 6.5 pH	July through November	1.5 qt/A (3.5 L/ha) 2,4-D LV ester improves perennial broadleaf weed and annual grass control. Spray before weeds produce seed. Use sweep plow if grass weeds are present. w/o 2,4-D Approx. cost \$5.00 to \$7.50.
	AAtrex 4L 2 to 3 qt (4.7 to 7.0 L) + Paraquat CL ⁸ 1 to 2 pt (1.2 to 2.3 L)	July through November	Spray before weeds produce seeds. If grasses such as barnyardgrass recover use sweep plow before weed seeds develop. Approx. cost \$9.25 to \$16.00.
WHEAT-ECOFALLOW-CORN CORN PLANTED IN WHEAT STUBBLE TREATED WITH AATREX AFTER HARVEST	Bladex 80W 1.5 to 2.0 lb ^{11,12} (1.7 to 2.2 kg)	Preemergence-May	Do not exceed label rate for the soil. Do not use on sandy and loamy sands with less than 1% organic matter. Approx. cost \$3.40 to \$4.50.
	Dual 3.3 to 4.0 pt ^{11,12} (3.9 to 4.7 L)	Preemergence-May	If annual grasses produced seed in the grain stubble or if areas of field have history of high grass population use higher rates of Dual or Lasso. Omit AAtrex in the combination treat- ments if the maximum AAtrex rate was used previous year and increase Dual or Lasso rate 25 to 50%. Approx. cost: Bladex--\$3.40 to \$4.50; Dual--\$10.65 to \$13.50; Dual + AAtrex--\$11.25; Lasso--\$8.75 to \$10.50; Lasso + AAtrex-- \$9.50.
	Dual + AAtrex 4L 2.7 pt + 1 qt ^{11,12,13} (3.2 L + 2.3 L)	Preemergence-May	
	Lasso 2.5 to 3 qt ^{11,12} (5.8 to 7.0 L)	Preemergence-May	
	Lasso + AAtrex 4L 2 qt + 1 qt ^{11,12,13} (4.7 + 2.3 L)	Preemergence-May	
WHEAT-ECOFALLOW-SORGHUM SORGHUM PLANTED IN WHEAT STUBBLE TREATED WITH AATREX AFTER HARVEST	Ramrod/Atrazine 69WP 5 lb (5.6 kg) or Ramrod/Atrazine Flowable ^{11,12,13} 4 qt (9.3 L)	Preemergence-May	Add Paraquat CL ⁸ if weeds and volunteer crops have emerged. Approx. cost \$9.50.
	Igran 80W + AAtrex 80W ^{11,12,13} 2 + 1 lb (2.3 + 1.1 kg)	Preemergence-May	Igran will kill or injure emerged sorghum. Do not use on soils less than 1.2% organic matter. Approx. cost \$7.15.
	Igran 80W ^{11,12} 2 to 2.5 lb (2.3 to 2.8 kg)	Preemergence-May	Use lower rate of soils below 1.2% organic matter. Approx. cost \$5.40 to \$6.75.

³ Cost calculated for broadcast treatment using least expensive formulation listed.

⁸ Add X77 spreader 1 to 2 pt (1.2 to 2.3 L) per 100 gal spray solution.

⁹ For use west of highway 83. Consider herbicides used in a wheat-fallow rotation as fallow aids and resume stubble mulch tillage practices in May-August to control grasses and prepare a seedbed.

¹¹ If seedling (3-leaf) grass or volunteer wheat are present at planting, add Paraquat at 1 pt/A (1.2 L/ha) + X77 to mixtures or prepare a shallow seedbed with tillage. Crop oil at 1 gpa (9.4 L/ha) may be substituted for Paraquat but control is not as good on large weeds. If weeds are beyond the seedling stage and volunteer wheat is growing vigorously, apply Roundup at 1 qt/A (2.3 L/ha) one week before planting or immediately after planting but before crop emergence. Do not mix Roundup with other herbicides.

¹² If Russian thistle is present the addition of 0.5 to 1 pt 2,4-D improves control.

¹³ Carryover of AAtrex/Atrazine may occur on eroded areas or in fields with less than 1.2% organic matter. Total amount of AAtrex/Atrazine applied last year to the stubble plus this treatment should not exceed 3.75 lb (4.2 kg) of 80W or 3 qt 4L (7 L) per acre.

FORAGE CROPS, PASTURES AND RANGES

Area or use	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A ³
ALFALFA (establishment)	Balan (1.5EC)	3-4 qt 7.0-9.3 ℓ	Preplant	Immediately incorporate by cross tandem disking or equivalent soil mixing. Early legume injury may occur. Controls primarily annual grasses. Approx. cost: Balan--\$5.80 to \$7.75; Eptam--\$8.60; Tolban--\$2.90 to \$5.80.
	Eptam 7E	3.5 pt 4.1 ℓ		
	Tolban (4EC)	1-2 pt 1.2-2.3 ℓ		
ALFALFA (seedling or established)	Butyrac or Butoxone (2,4-DB)	2 qt 4.7 ℓ	Postemergence when weeds are less than 3" (7.6 cm)	For broadleaf weeds. Do not use treated forage for 30 days. DO NOT confuse with 2,4-D. Use when temperature is above 50°F (10°C). Approx. cost \$5.90.
	Chem-Hoe 4FL	3-4 qt 7.0-9.3 ℓ	Pre- or post-emergence to winter annual grasses late October thru mid-March	Controls downy brome and other annual weeds in established alfalfa or seedlings with 3 or more trifoliate leaves. Use Chem-Hoe when soil temperature is below 55°F (13°C). Moisture necessary for chemical activity. Kerb helps control sandbur. Approx. cost: Chem-Hoe--\$6.00 to \$8.00; Kerb--\$8.00 to \$12.00.
	Kerb 50W	1-1.5 lb 1.1-1.8 kg		
ALFALFA (established 1 year or more)	Princep 80W	1-2 lb 1.1-2.2 kg	Late fall before soil freezes	Primarily for winter annual weeds including downy brome, pennycress and other mustards. Injury may occur on soils with less than 1% organic matter. Approx. cost: Princep--\$2.50 to \$5.00; Sinbar--\$9.00 to \$13.00; Sencor--\$5.05 to \$6.75.
	Sinbar (80W)	0.75-1 lb 0.8-1.1 kg	Late fall or early spring	
	Sencor/Lexone 50W	0.75-1.0 lb 0.8-1.1 kg		
SWITCHGRASS (establishment)	AAtrex 80W or AAtrex 4L	2.5 lb 2.8 kg 2.0 qt 4.7 ℓ	Preemergence	Controls many annual grasses and broadleaf weeds. Do not use on sandy soils or soils below 1% organic matter. Approx. cost \$4.40.
COOL-SEASON GRASS SEEDLINGS	2,4-D	1-1.5 pt 1.2-1.7 ℓ	2- to 4-leaf stage of grass	For broadleaf weeds. If larger weeds have formed canopy, increase rate to 1 qt (2.3 ℓ). Approx. cost \$.50 to \$1.20.
WARM-SEASON GRASS SEEDLINGS	2,4-D	0.5-1 pt 0.6-1.1 ℓ		
WARM-SEASON GRASSES FOR SEED	AAtrex 4L or AAtrex 80W	3 qt 7.0 ℓ 3.75 lb 4.2 kg	Spring or fall before weed emergence	Do not use until second year after seeding. Less effective in heavy plant residues. Approx. cost AAtrex \$6.45.

(Continued next page)

³Costs calculated for broadcast treatment using least expensive formulation listed.

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl because of fume hazards. 2,4-D, silvex, 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (0.45 kg/ℓ) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

FORAGE CROPS, PASTURES AND RANGES--(CONTINUED)

Area or use	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A ³
ANNUAL OR BIENNIAL BROADLEAF WEEDS IN PASTURES AND RANGES	2,4-D	1 qt 2.3 ℓ	Rosette stage in fall or when weeds are small in spring	Withhold milk cows from grazing treated areas for 7 days after 2,4-D application. With Banvel mixture do not harvest hay for dairy animals within 37 days or graze within 6 weeks of application. Do not use Banvel within 1/2 mile (0.8 km) of sensitive crops. Combination controls greater variety of weed species. Approx. cost: 2,4-D--\$1.50; 2,4-D + Banvel--\$3.35.
	2,4-D	1 qt 2.3 ℓ		
	+ Banvel (4WS)	+ 0.5 pt 0.6 ℓ		
PERENNIAL BROAD-LEAF WEEDS IN PASTURES AND RANGES (includes vervains, broom snakeweed, western iron-wood and woolly loco)	2,4-D	1.5 qt 3.5 ℓ	At bud stage of predominant weeds. ¹⁴ April for dandelions	Annual treatment for 2 to 3 years may be necessary. Withhold milk cows from grazing treated areas for 7 days after 2,4-D application. With Banvel mixture do not harvest hay for dairy animals within 37 days or graze within 6 weeks of application. Do not use within 1/2 mile (0.8 km) of sensitive crops. Approx. cost \$2.25 to \$5.25.
	2,4-D	1 qt 2.3 ℓ		
	+ Banvel (4WS)	+ 1 pt 1.2 ℓ		
RANGELAND	AAtrex 80W	1-1.25 lb 1.1-1.4 kg	Fall	Controls winter annual bromes in warm season grasses. Do not graze for 7 months after application. Reduce grazing pressure to improve grass stands. Approx. cost \$1.75 to \$2.20.
	or AAtrex 4L	1.6-2 pt 1.9-2.3 ℓ		

³Costs calculated for broadcast treatment using least expensive formulation listed.

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex, 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (0.45 kg/ℓ) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

¹⁴Retreatment will be necessary.

WINDBREAKS AND TREE PLANTINGS

Crop or use	Herbicide	Apply this amount commercial product per acre (per hectare)	Application time	Remarks, Approximate Cost/A ³
TREES AND SHRUBS	Amizine (WP)	7 lb 7.8 kg	Postemergence when weeds are small	Apply as a directed spray. Keep spray off the tree. Controls emerged and later germinating weeds. Approx. cost \$28.00.
	Dowpon M (74SP)	4-15 lb (4.5-17 kg)	Postemergence before grasses head	Grass control only. Use only on trees established 1 or more years. Keep spray off foliage. Use lower rates on seedling grasses, higher rates on perennial grasses. Approx. cost \$5.60 to \$21.00.
	Casoron 4G	100 lb 112 kg	Preemergence to weeds	Apply 20" (50 cm) band on each side of tree row after trees are planted. Some injury to trees may result on low organic matter soils.
	Paraquat CL (2WS)	1-2 qt 2.3-4.7 l	Postemergence	Nonselective contact herbicide. Use sufficient water and wetting agent to cover weed foliage. Keep spray off tree foliage. Add 0.5% X77 wetting agent to spray solutions. Approx. cost \$8.50 to \$17.00.
	Princep 80W	2.5-5 lb 2.8-5.6 kg	Preemergence to weeds	Use lighter rate on sandy soils. See remarks for Casoron. Approx. cost \$6.25 to \$12.50.
	Treflan (4EC)	1-1.5 pt 1.2-1.7 l	Preplant	Incorporate 2 to 3" (5 to 7.5 cm) deep prior to planting. After planting adjust machine to throw treated soil towards trees in the row. Approx. cost \$2.90 to \$4.35.
	Roundup (3WS)	1-4 qt 2.3-9.3 l	Postemergence	Do not spray green bark or foliage. Spray may contact brown bark. Use lower rate on annuals. Approx. cost \$13.50 to \$54.00.
	Karmex (80W)	2.5-5 lb 2.8-5.6 kg	Preemergence to weeds	See remarks for Casoron. Karmex use limited to conifers, honey locust and green ash. Approx. cost \$6.50 to \$13.00.
CHRISTMAS TREES SCOTCH, AUSTRIAN, PONDOROSA PINE, DOUGLAS FIR	Velpar	1-3 qt 7.8 kg	Postemergence at least 1 month after planting	Use lower rates on sandy soils, soils low in organic matter, and on first year plantings. May be applied directly over the trees. Approx. cost \$15.00 to \$45.00.

³Costs calculated for broadcast treatment using least expensive formulation listed.

TROUBLESOME WEEDS AND WOODY PLANTS

Best control will be obtained if treatments are made when plants are actively growing. Plan to make more than one treatment. An application just before flowering and a second application on fall regrowth will give best results on most perennials. Dust on leaves may interfere with herbicide activity.

Weed	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A
ALFALFA	2,4-D amine + Banvel (4WS)	0.5 pt 0.6 l + 0.5 pt 0.6 l	Postemergence	For use in corn. Use drop nozzles on corn taller than 8". To kill established alfalfa prior to corn planting see "No-Till Corn in Alfalfa Sod" page 13. Approx. cost \$2.25.
ARTICHOKE, JERUSALEM	2,4-D amine + Banvel (4WS)	0.5 pt 0.6 l + 0.5 pt 0.6 l	12 to 18" (30 to 45 cm) tall	For use in corn. Use drop nozzles on corn taller than 8" (20.3 cm). Approx. cost \$2.25.
	2,4-D LV ester	1 qt 2.3 l	18 to 24" (45 to 61 cm) tall	For use where no crop is present. Approx. cost \$1.80.
BLUE MUSTARD	2,4-D LV ester	0.5 pt 0.6 l	Nov. 15 - March 15 Before blue mustard stem elongation	Use only on fully tillered wheat. Approx. cost \$.50 to \$.75.
	2,4-D amine	1 pt 1.2 l		
BURSAGE, SKELETONLEAF AND WOOLLYLEAF	Tordon 22K	2 qt 4.7 l	Bud stage or when growing actively	For non-crop areas. Tordon may remain in the soil for 3 or more years. Carefully read and observe all label precautions. Approx. cost \$35.00.
	2,4-D + Banvel (4WS)	1 qt 2.3 l + 1 pt 1.2 l	Early June or when growing actively	See remarks for field bindweed. If soil moisture conditions are poor, use oil-water emulsions as a carrier. Approx. cost \$5.25.
	Tordon 22K	2 qt 4.7 l	Fall (rosette) or spring (early bud)	For non-crop areas. Tordon may remain in the soil for 3 or more years. Carefully read all label precautions and warnings. Approx. cost \$35.00.
CANADA THISTLE	2,4-D + Banvel (4WS)	1 qt 2.3 l + 1 pt 1.2 l	Fall (rosette) and spring (early bud)	See remarks for field bindweed. Approx. cost \$5.25.
	Amitrol T-or Cytrol T-(2WS)	2 gal 18.7 l	When growing actively	See remarks for field bindweed. Amitrol T and Cytrol T kill all vegetation. Use on non-cropland. Approx. cost \$26.00
	Roundup (3WS)	2-3 qt 4.7-7.0 l	Prebud to bud stage or in fall when growing actively	Idle ground or spot treatment in crop before head or pod fill. Avoid tillage for at least 3 days after treatment. Approx. cost \$27.00 to \$40.50.
CATTAILS	2,4-D LV ester	1.5 gal (14 l) + 5% diesel oil + 0.5% emulsifer	Boot to early flowering	Use the equivalent of 150 gal of water per acre (1403 l/ha). Retreat regrowth as necessary. Approx. cost: 2,4-D--\$10.50; Dowpon--\$28.00.
	Dowpon M (74SP) or Dowpon C (74SP)	20 lb (22.4 kg) + 0.5% emulsifer 30 lb (33.6 kg) + 0.5% emulsifer	After flowering to fruiting	

(Continued next page)

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex, 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (0.45 kg/l) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

¹⁴Retreatment may be necessary.

TROUBLESOME WEEDS AND WOODY PLANTS--(CONTINUED)

Weed	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A
COTTONWOOD, WILLOWS AND SIBERIAN ELM	2,4-D LV ester	2-3 qt 4.7-7.0 l	Full foliage (early June) or basal treatment anytime	Aerial equipment: at least 5 gal carrier/A (47 l/ha). Annual treatment for 2 to 3 years may be necessary. Basal treatment: 2 qt of herbicide/10 gal (1.9 l/94 l) of diesel. Spray tree trunk to point of runoff. Approx. cost \$3.50 to \$5.25.
DOGWOOD	2,4-D + 2,4,5-T LV esters	2 qt (4.7 l) of most "Brushkillers"	Full foliage during June	See remarks for cottonwood. Approx. cost \$7.00.
DOWNY BROME	AAtrex or Atrazine 80W or AAtrex or Atrazine 4L	2.5 lb 2.8 kg 2 qt 4.7 l	Preemergence (fall or spring prior to April 1)	Use in waste areas such as fence rows and ditchbanks. Use sufficient water to insure good coverage. See page 15 for control in alfalfa and page 16 for control in rangeland. Approx. cost: AAtrex--\$4.40; Princep--\$6.25.
	Princep 80W	2.5 lb 2.8 kg		
FIELD BINDWEED	2,4-D	1 qt 2.3 l	Vigorous fall growth or bud stage in spring ¹⁴	Avoid tillage 5 weeks before and 1 week after application. Plan to treat for several consecutive years. Approx. cost: 2,4-D--\$1.50; 2,4-D + Banvel \$5.25.
	2,4-D + Banvel (4WS)	1 qt 2.3 l 1 pt 1.2 l		
	Tordon 22K	2 qt 4.7 l	Vigorous fall growth or bud stage in spring	Tordon for non-crop areas only. Avoid tillage 5 weeks before and 1 week after application. Carefully read and observe all label precautions and warnings. Approx. cost \$35.00.
	Roundup (3WS)	4-5 qt 9.3-10.6 l	Late summer or fall when actively growing	Idle ground or spot treatment before head or pod fill. Avoid tillage for at least 7 days after treatment. Approx. cost \$54.00 to \$67.50.
GROUNDSEL, RIDDELL	2,4-D	1 qt 2.3 l	May 15-June 15	Approx. cost \$1.50.
HEMP	2,4-D	1 pt-1 qt 1.2-2.3 l	2 to 12" (5.1 to 30 cm) tall	At later growth stages use higher rate. Approx. cost \$.75 to \$1.50.
HEMP DOGBANE	2,4-D	1 qt 2.3 l	Spring bud stage ¹⁴	Use lower rates in crops. Approx. cost \$1.50.
	2,4-D	1-1.25 qt 2.3-2.9 l	After corn silks turn brown or milo is in the soft dough stage ¹⁴	Can be used in standing corn and milo. Use the lower 2,4-D rate on milo. Do not apply Banvel within 30 days of harvest. Dogbane roots should have pink swollen buds. Effective only on dogbane plants with vigorous green leaves. Ground application may be more effective than aerial application on corn in 30" (76 cm) rows. Do not use Banvel within 1/2 mile (0.8 km) of sensitive crops before September 1. Approx. cost: 2,4-D--\$1.50 to \$1.75; 2,4-D + Banvel \$3.35.
	2,4-D amine + Banvel (4WS)	1 qt 2.3 l + 0.5 pt 0.6 l		

(Continued next page)

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex, 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (0.45 kg/l) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

¹⁴Retreatment may be necessary.

TRoublesome Weeds and Woody Plants--(continued)

Weed	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A
HEMP DOGBANE	Roundup (3WS)	4 qt 9.3 l	Late summer or fall	Idle ground or spot treatment before head or pod fill. Avoid tillage for at least 7 days after treatment. Approx. cost \$54.00.
HOARY CRESS	2,4-D LV ester	0.5-1 gal 4.7-9.3 l	Rosette stage in the fall or early bud in spring ¹⁴	Same as for field bindweed except amine formulations less effective. Approx. cost \$3.00 to \$6.00.
JOHNSONGRASS (See shatter-cane for seedling control)	Dowpon M (74SP)	6.7 lb 7.5 kg	8 to 12" (20 to 30 cm) new growth or regrowth ¹⁴	Repeat treatment 3 times, 10 to 20 days apart. Treat when 70°F (21°C) or above. Approx. cost \$9.40.
	Sodium TCA (90SP)	100 lb 112.1 kg	Early spring ¹⁴	Use enough water to insure good coverage. Retreat escaped plants.
	Ansar 529 H.C. or Daconate (6WS)	2 qt 4.7 l	Boot stage	Treat when 70°F (21°C) or above. Do not use on cropland or grassland. Approx. cost \$5.85.
	Roundup (3WS)	2-3 qt 4.7-7.0 l	12" (30 cm) through boot stage	Idle ground or spot treatment before head or pod fill. Avoid tillage for 7 days after application. Approx. cost \$27.00 to \$40.50.
LEAFY SPURGE	2,4-D LV ester	2 qt 4.7 l	Early bud stage spring or late fall ¹⁴	Same as for field bindweed except amine formulations less effective. Control seedlings. Approx. cost \$3.50.
	2,4-D + Banvel (4WS)	1 qt 2.3 l + 1 pt 1.2 l	Fall or spring ¹⁴	See remarks for field bindweed. Approx. cost \$5.25.
	Tordon 22K	2 qt 4.7 l	Fall or spring	Tordon for non-crop areas only. Carefully read and observe all label warnings and precautions. Approx. cost \$35.00.
LOCUST, HONEY AND BLACK	2,4,5-T or Silvex LV ester	2 qt 4.7 l	Full foliage during June or basal treatment anytime	See remarks for cottonwood. Approx. cost \$11.00.
MILKWEED, COMMON	Amino Triazole (90SP) or Amitrol-T/Cytrol-T (2WS)	4.4 lb 4.5 kg 2 gal 18.6 l	Bud to bloom stage ¹⁴	Use enough water to insure good coverage. Use Amino Triazole and Amitrol-T/Cytrol-T only on non-cropland. 2,4-D + Banvel suppresses growth for 1 year. Approx. cost: Amitrol-T--\$26.00; 2,4-D + Banvel--\$3.35.
	2,4-D + Banvel (4WS)	1 qt 2.3 l + 0.5 pt 0.6 l		
	Roundup (3WS)	3 qt 7.0 l	Flowering through maturity	Idle ground or spot treatment before head or pod fill. Avoid tillage for 7 days after application. Approx. cost \$40.50.

(Continued next page)

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (0.45 kg/l) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

¹⁴Retreatment may be necessary.

TROUBLESOME WEEDS AND WOODY PLANTS--(CONTINUED)

Weed	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A
MILKWEED, HONEYVINE (CLIMBING)	2,4-D amine	1-2 pt 1.2-2.3 ℓ	Before vines reach 3' in length	For use in corn or sorghum. Use lower rates in sorghum. Gives suppression only. Approx. cost \$.50 to \$1.00.
	2,4-D LV ester	0.5-1.0 pt 0.6-1.2 ℓ		
MULLEIN, COMMON	2,4,5-T or Silvex	1-1.5 qt 2.3-3.5 ℓ	Late fall on rosettes or spring before flowering stalks lengthen	Essential to apply in rosette stage. Approx. cost \$5.50 to \$8.25.
MUSK AND PLUMELESS THISTLE	2,4-D	1.5-2 qt 3.5-4.7 ℓ	Late fall treatment of rosettes or spring before flowering stalks lengthen	Annual treatments may be necessary for control of new seedlings. Chemical applications after trees drop leaves in the fall and before leafing out in the spring reduce damage to trees. Tordon: Do not apply after "soil freeze-up" in the fall. For use on ranges and permanent pastures only. Carefully read label and heed all precautions and warnings. Approx. cost: 2,4-D--\$2.25 to \$3.50; 2,4-D + Banvel \$3.35; Tordon \$4.40.
	2,4-D + Banvel (4WS)	1 qt 2.3 ℓ + 0.5 pt 0.6 ℓ		
	Tordon 22K (musk only)	6-8 oz 0.4-0.6 ℓ		
			Oct. 1 - Dec. 1 or before May 1 in spring	
OAKS	2,4,5-T or Silvex LV ester	2-3 qt 4.7-7.0 ℓ	Full foliage June to July or basal treatment anytime	Retreatment necessary. See remarks for cottonwood. Approx. cost \$11.00 to \$16.50.
OSAGEORANGE	2,4,5-T LV ester	2 qt 4.7 ℓ	Full foliage June to July or basal treatment anytime	See remarks for cottonwood. Approx. cost \$11.00.
PERENNIAL SOWTHISTLE	2,4-D	1.5 qt 3.5 ℓ	Fall rosette or spring bud stage	See remarks for field bindweed. Approx. cost \$2.25.
POISON IVY	Amino Triazole/ Weedazol (90SP) or Amitrol-T/ Cytrol-T (2WS)	2 tbs/gal of water 4 mL/ℓ	Full foliage (June) ¹⁴	Thoroughly wet all vegetation. Do not apply Amino Triazole or Amitrol-T to cropland nor use 2,4,5-T in recreational areas.
	2,4,5-T or Silvex	0.5 cup/gal of water 10 mL/ℓ		
	2,4-D + 2,4,5-T	2 tbs/gal of water 4 mL/ℓ		
PRICKLYPEAR	Silvex	1-2 qt 2.3-4.7 ℓ	Bud to bloom stage	Rotary hoe pads just prior to spraying. Add 1 gal/A (9.3 ℓ/ha) diesel + 0.5% emulsifier in water carrier. Approx. cost \$5.50 to \$11.00.
PUNCTUREVINE	2,4-D LV ester	1 qt 2.3 ℓ	Pre-bud stage most effective	Mature burs not affected by 2,4-D. Approx. cost \$1.75.
PURSLANE	2,4-D	1 qt 2.3 ℓ	When growing actively	Till 5-7 days after treatment. Approx. cost \$1.50.

(Continued next page)

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (4.45 kg/ℓ) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

¹⁴Retreatment may be necessary.

TRoublesome Weeds and Woody Plants--(Continued)

Weed	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A
RAGWEED, WESTERN (perennial)	2,4-D	1 qt 2.3 ℓ	Early summer ¹⁴	Follow-up treatments may be necessary. Approx. cost \$1.50.
RUSSIAN Knapweed	2,4-D LV ester	2 qt 4.7 ℓ	Early bud stage ¹⁴	Same as for field bindweed except amine formulations less effective. Approx. cost: 2,4-D--\$3.00; 2,4-D + Banvel \$5.25.
	2,4-D +	1 qt 2.3 ℓ +		
	Banvel (4WS)	1 pt 1.2 ℓ		
RUSSIAN OLIVE	2,4-D + 2,4,5-T - LV esters	2 qt (4.7 ℓ) of most "Brushkillers"	Full foliage (early June) ¹⁴	See remarks for cottonwood. Approx. cost \$7.00.
SAGEBRUSH (Sand and fringed and green sagewort)	2,4-D LV ester	1.5 to 2 qt 3.5-4.7 ℓ	4 to 8" (10 to 20 cm) new growth (June) ¹⁴	Use sufficient water to insure good coverage. 1.5 qt/A (3.5 ℓ/ha) 2,4-D adequate on sand sagebrush. Approx. cost \$2.60 to \$3.50.
SHATTERCANE (wild cane) AND SEEDLING JOHNSONGRASS	Sutan ⁺ 6.7E	7.3 pt 8.5 ℓ	Preplant to corn	Incorporate immediately by cross tandem disking or equivalent soil mixing. Some crop injury may result from Treflan and Tolban. Use higher rates on fine textured soils. Plant corn on the land the year following Princep treatment. Eradicane not recommended for shattercane control east of U.S. Hwy. 81 and south of I-80 nor east of U.S. Hwy. 77 and north of I-80. Under very high shattercane population herbicides may not give acceptable control--rotate to small grain or alfalfa. Approx. cost: Sutan ⁺ \$9.50; Eradicane \$11.55; Eradicane + Princep \$15.50; Sutan ⁺ + Princep \$13.85; Treflan \$5.80; Tolban \$5.80 to \$7.25
	Eradicane 6.7E	5 pt 5.8 ℓ	Preplant to corn	
	Princep 30W +	2.5 lb 2.8 kg +	Preplant to corn	
	Eradicane 6.7E or Sutan ⁺	2.0 qt 4.7 ℓ		
	Treflan (4EC)	2-2.5 pt 2.3-2.9 ℓ	Preplant to soybeans	
	Tolban (4EC)	2-3 pt 2.3-3.5 ℓ		
SNOWBERRY (BUCKBRUSH)	2,4-D LV ester	1-2 qt 2.3-4.7 ℓ	Full foliage (May 10 to 25)	Use sufficient water to insure good coverage. Approx. cost \$1.75 to \$3.50.
SOAPWEED (YUCCA)	Silvex	2 qt 4.7 ℓ	June ¹⁴	Use diesel as a carrier. Approx. cost \$11.00.
SUMAC	2,4-D	1-2 qt 1.2-2.3 ℓ	Full foliage spring or summer	Use sufficient water to insure good coverage. Approx. cost \$1.50 to \$3.00.
SWAMP SMARTWEED (TANWEED)	2,4-D LV ester +	1 qt 2.3 ℓ +	When growing vigorously ¹⁴	On crops use lower rates and amine formulations. Approx. cost \$5.25.
	Banvel (4WS)	1 pt 1.2 ℓ		
		Roundup (3WS)	3-4 qt 7.0-9.3 ℓ	Full foliage mid to late summer

(Continued next page)

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (4.45 kg/l) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

¹⁴Retreatment may be necessary.

TROUBLESOME WEEDS AND WOODY PLANTS-- (CONTINUED)

Weed	Herbicide	Apply this amount commercial product per acre ⁶ (per hectare)	Application time	Remarks, Approximate Cost/A
VELVETLEAF	2,4-D LV ester	0.5-1 pt 0.6-1.2 ℓ	Velvetleaf less than 12" (30.5 cm)	2,4-D for corn and milo; Basagran for soybeans and corn. Use .75 qt Basagran on velvetleaf 2" in height or less, 1.0 qt on velvetleaf 2"-5" in height. Also consider appropriate preemergence herbicides. Approx. cost: 2,4-D--\$.50 to \$1.00; Basagran--\$9.75 to \$13.00.
	Basagran (4WS)	0.75-1 qt 1.8-2.3 ℓ	Velvetleaf less than 5" (12.7 cm)	
WILD BUCKWHEAT	Brominal or Buctril (2EC) + 2,4-D amine	1 pt 1.2 ℓ + 0.5 pt 0.6 ℓ	After tillering of small grain	Thorough coverage required. Weeds should be in 3- to 4-leaf stage. Approx. cost \$4.15.
	Banvel (4WS) + 2,4-D amine	4 oz 0.3 ℓ + 0.75 pt 0.9 ℓ	Before wheat joints or when millet or oats in 2-5 leaf stage	Controls most troublesome broadleaf weeds. Approx. cost \$1.50.

NON-CROP AREAS

Area or use	Herbicide	Apply this amount commercial product ⁶	Application time	Remarks
ROADSIDES (Broadleaf weed control)	2,4-D	1 qt/A 2.3 ℓ/ha	Broadleaf weeds 2 to 6" (5 to 15 cm)	Repeat treatments may be necessary. For woody species replace 0.5 qt/A (1.2 ℓ/ha) 2,4-D with 0.5 qt/A (1.2 ℓ/ha) 2,4,5-T.
	2,4-D + Banvel (4WS)	1 qt/A 2.3 ℓ/ha + 1 pt/A 1.2 ℓ/ha		
	Tordon 212	2 qt/A 4.7 ℓ/ha		
			Postemergence	Do not use BANVEL or TORDON near susceptible plants. Approx. cost: 2,4-D--\$1.50; 2,4-D + Banvel--\$5.25; Tordon--\$19.50.
IRRIGATION DITCHBANKS	Karmex (80W)	5-10 lb/A 5.6-11.2 kg/ha	Soon after ditches are open. Treat before weeds appear or soon thereafter.	Use enough water to insure good coverage. Use 50 mesh or coarser screens. May injure nearby trees and shrubs. Approx. cost: Karmex--\$13.00 to \$26.00; Aatrex--\$13.00.
	Aatrex, Atrazine or Princep 80W or Aatrex or Atrazine 4L	7.5 lb/A 8.4 kg/ha 1.5 gal/A 14 ℓ/ha		
	2,4-D	1 qt/A 2.3 ℓ/ha	Broadleaf weeds 2 to 6" (5-15 cm)	Approx. cost \$1.50.
LONG TERM VEGETATION CONTROL	Pramitol 25E or Pramitol 5PS	4 pt/1000 sq ft 2 ℓ/100 sq m 10-20 lb/1000 sq ft 5-10 kg/100 sq m	Treat before weeds appear or soon thereafter	Some weeds will require higher rates. Consult label for specific instructions on problem weeds and conditions. Herbicides listed for irrigation ditchbanks can also be used for long term vegetation control. Consult label for rates. Approx. cost: Pramitol--\$4.00/1,000 sq ft; Hyvar--\$3.30/1,000 sq ft; Krovar I--\$2.50/1,000 sq ft.
	Hyvar X (80W)	0.5 lb/1000 sq ft 0.25 kg/100 sq m		
	Hyvar XL (2WS)	0.75 pt/1000 sq ft 0.4 ℓ/100 sq m		
	Krovar I (80W)	0.5 lb/1000 sq ft 0.25 kg/100 sq m		
PERENNIAL GRASSES (including brome grass and quack-grass)	Roundup (3WS)	2 qt/A 4.7 ℓ/ha	Full foliage	Non-selective. Perennial grasses should have good top growth. Kills all annuals. Approx. cost: Roundup--\$27.00, Amitrol-T--\$26.00.
	Amino Triazole/ Weedazol (90SP) or Amitrol-T/ Cytrol-T (2WS)	4.4 lb/A 5.0 kg/ha 2 gal/A 19 ℓ/ha		

⁶Low volatile ester and salt formulations preferred over volatile esters such as butyl and isopropyl. 2,4-D, silvex 2,4,5-T and MCPA calculated on the basis of 4 lb/gal (4.45 kg/ℓ) of acid equivalent (the chemicals responsible for herbicidal effects). For other formulations see conversion table page 27.

HERBICIDE DICTIONARY

- AAttram**--A 20% granular form of atrazine plus propachlor (Ramrod). Discontinued in 1978. Ciba-Geigy.
- AAtrex**--A trade name for atrazine. Ciba-Geigy.
- Amex (butralin)**--A preplant incorporated soybean herbicide similar to Treflan for grass weed control. Discontinued in 1977. Amchem.
- Amiben (chloramben)**--A preemergence herbicide for grass and broadleaf weeds in soybeans. Amchem.
- Amilon**--A wettable powder combination of Amiben and Lorox for preemergence broadleaf and grass weed control in soybeans. Avoid use on sandy soils. Amchem.
- Alanap (naptalam)**--A preemergence broadleaf and grass herbicide for soybeans and vine crops. Uniroyal.
- Amino Triazole**--Trade name for amitrole. American Cyanamid.
- amitrole**--A translocated herbicide that inhibits chlorophyll formation and regrowth from root buds. Trade names are Amino Triazole, Cytrol and Weedazol.
- Amitrol-T**--Amitrole + ammonium thiocyanate. Amchem.
- Amizine (amitrole + simazine)**--A combination of amitrole and simazine providing post and preemergence weed control in tree plantings and non crop areas. Amchem.
- Ancrack (naptalam + dinitro)**--A combination of Alanap plus dinitro for postemergence broadleaf weed control in soybeans.
- Antor (diethatyl-ethyl)**--An experimental preemergence and preplant incorporated herbicide being developed for annual grass control in soybeans and sugarbeets. Hercules.
- atrazine**--A preplant, preemergence, and postemergence s-triazine herbicide for the control of broadleaf and certain grass weeds in corn, sorghum, and range-land. Available under several private labels.
- Avenge (difenzoquat)**--Selectively controls wild oats postemergence in spring small grain. American Cyanamid.
- Balan (benefin)**--A preplant incorporated herbicide primarily for annual grass control in alfalfa. Elanco.
- Banvel (dicamba)**--A post- and preemergence herbicide for selective broadleaf weed control in corn, small grains and grasses. Velsicol.
- Basafon (dalapon)**--Trade name for dalapon. BASF-Wyandotte.
- Basagran (bentazon)**--A postemergence fieldbean, corn, and soybean herbicide for velvetleaf, cocklebur, and other broadleaf weeds under 6" (15.2-20.3 cm). BASF-Wyandotte.
- Basalin (fluchloralin)**--A preplant soil incorporated herbicide primarily for annual grass weed control in soybeans. BASF-Wyandotte.
- Betanex (desmedipham)**--Used postemergence for redroot pigweed control in sugarbeets. Nor-Am.
- Benzac (2,3,6-TBA)**--Primarily for perennial broadleaf weed control in non crop land. Amchem.
- Betanal (phenmedipham)**--Postemergence broadleaf weed control in sugarbeets. Nor-Am.
- Bexton (propachlor)**--Trade name for propachlor. Primarily for grass weed control in sorghum and corn. Dow.
- Bicep (metolachlor + atrazine)**--A combination of Dual + AAtrex being developed for preemergence use in corn. Ciba-Geigy.
- Bladex (cyanazine)**--A short residual triazine for grass and broadleaf weed control in corn and sorghum. Shell.
- Blazer (aciflorfen)**--A postemergence herbicide for broadleaf weed control in soybeans. Currently labeled with an experimental permit. Rohm & Haas.
- Blazine (cyanazine + atrazine)**--A combination of Bladex + atrazine. Shell.
- Brominal (bromoxynil)**--A contact herbicide for selective control of broadleaf weeds in small grain. Amchem.
- Brominal plus**--A combination of bromoxynil and MCPA for use in small grain. Amchem.
- Bronate**--Similar to Brominal plus. Rhodia.
- Buctril (bromoxynil)**--Similar to Brominal. Rhodia.
- Butoxone (2,4-DB)**--For selective control of cocklebur in soybeans and some small broadleaf weeds in seedling alfalfa. Rhodia.
- Butyrac (2,4-DB)**--Similar to Butoxone. Amchem.
- Carbyne (barban)**--Used for wild oat control in spring small grain. Gulf.
- Casoron (dichlobenil)**--Used for preemergence weed control in woody plants and certain herbaceous perennials. Thompson-Hayward.
- Chem-Hoe (propham)**--Used pre- and postemergence for winter annual grass control in alfalfa. PPG Industries.
- Chloro IPC (chlorpropham)**--Similar to Chem-Hoe. PPG Industries.
- Cobex (dinitramine)**--A preplant incorporated soybean herbicide for grass weed control. Slightly better control of some broadleaf weeds, shorter soil life and narrower margin of crop safety than other dinitroaniline herbicides. U.S. Borax.
- Cycle (procyazine)**--A new short residual triazine for grass and broadleaf weed control in corn. EPA experimental permit. Ciba-Geigy.
- Cytrol**--Trade name for amitrole. American Cyanamid.
- 2,4-D**--A widely used growth regulating phenoxy herbicide for broadleaf weed control in grass crops. Many trade names.
- Dacamine**--An oil soluble amine salt formulation of 2,4-D. Diamond-Shamrock.
- Dacthal (DCPA)**--Used for preemergence control of annual grass and certain broadleaf weeds in turf, ornamentals and horticultural crops. Diamond-Shamrock.
- Dalapon**--Used for grass control in many broadleaf crops and for perennial grass control. Dow.

HERBICIDE DICTIONARY-- (CONTINUED)

Dinitro Weed Killer (dinoseb)--A contact weed killer for use in alfalfa, corn, and soybeans. Can be used preemergence or early post on soybeans. Highly toxic to warm blooded animals. Also sold as Dow Selective Weed Killer and Premerge. Dow.

Diquat (diquat)--Used for aquatic weed control and desiccation of legume, soybean, and grain sorghum seed crops. Chevron-Ortho.

Dowpon (dalapon) Trade name for dalapon. Dow.

Dual (metolachlor)--Used preplant or preemergence for annual grass and some broadleaf weed control in corn. Ciba-Geigy.

Dyanap (naptalam + dinitro)--A combination of Alanap and dinitro. Use preemergence or postemergence on soybeans. Controls most annual weeds. Uniroyal.

Endothall (endothall)--A herbicide registered for pre-emergence and postemergence control of annual grass and broadleaf weeds in sugarbeets. Pennwalt.

Enide (diphenamid)--A preemergence herbicide for the control of annual grasses and some broadleaf weeds in potatoes. Upjohn.

Eptam (EPTC)--A preplant soil incorporated herbicide for grass and certain broadleaf weed control in corn, legumes, sugarbeets and many horticultural crops. Stauffer.

Eradicane (EPTC + R-25788 antidote)--Used similar to Eptam. The antidote provides greater crop safety for corn. Stauffer.

Evik (ametryn)--Used as a directed postemergence contact spray for weed control in corn. Ciba-Geigy.

Furloe (chlorpropham)--Used preplant incorporated and preemergence for smartweed control in soybeans. PPG Industries.

Garlon (Dowco 233)--Experimental herbicide under development for woody plant control. Dow.

Goal (oxyfluorfen)--An experimental preemergence herbicide for weed control in soybeans. Rohm & Haas.

Hoelon (dichlofop)--A postemergence herbicide for grass control in soybeans. Currently under development. American Hoechst.

Hyvar (bromacil)--Used as a soil sterilant and for woody plant control. DuPont.

Igran (terbutyryn)--A short residual s-triazine used primarily for weed control in sorghum. Generally combined with AAtrex or Milogard for broader spectrum weed control and reduced soil residues. Ciba-Geigy.

Karmex (diuron)--A substituted urea for selective annual weed control at low rates and as a soil sterilant at higher rates. DuPont.

Kerb (pronamide)--A new herbicide for preemergence and early postemergence weed control in alfalfa. Rohm & Haas.

Klean Krop (naptalam + dinitro)--Same active ingredient as Ancrack. Thompson-Hayward.

Knoxweed--A combination of Eptam and 2,4-D for preemergence annual weed control in corn. Do not use on sandy soils. Stauffer.

Krenite--A water soluble brush control agent that can be used on species adjacent to water. DuPont.

Krovar--A combination of Hyvar and Karmex. DuPont.

Kuron (silvex)--Trade name for silvex. Dow.

Lasso (alachlor)--Used preplant and preemergence for annual grass and some broadleaf weed control in corn, soybeans and fieldbeans. Monsanto.

Lexone--Trade name for metribuzin. DuPont.

Lorox (linuron)--Used primarily preemergence for broad-leaf weed control in corn, sorghum and soybeans. DuPont.

Maloran (chlorobromuron)--A substituted urea used pre-emergence for broadleaf weed control in soybeans and corn. Frequently used in combination with a grass herbicide. Similar to Lorox. Ciba-Geigy.

MCPA--A phenoxy herbicide similar to 2,4-D but safer on oats and legumes. Often used in combination. Many trade names. Amchem, Dow, Rhodia.

metribuzin --Used for annual broadleaf weeds in soybeans, alfalfa, potatoes, and winter wheat, often used in combinations. DuPont, Chemagro.

Milogard (propazine)--Used for preemergence weed control in sorghum. Performs best on soils low in organic matter. Often combined with AAtrex and Igran for improved annual grass control. Ciba-Geigy.

Modown (bifenox)--A preemergence herbicide for the control of broadleaf and certain grass weeds in soybeans, corn and sorghum. Early injury observed on soybeans and corn. Mobil.

Mondak--A combination of Banvel and MCPA for broadleaf weed control in small grain. Velsicol.

Monobor-chlorate (sodium metaborate tetrahydrate)--A nonselective herbicide for general vegetation control on noncrop land. U.S. Borax.

MSMA (monosodium methanearsonate)--Used for selective crabgrass control in turf and for the control of many weeds including johnsongrass in noncrop area. Amchem, Vineland.

Nortron (ethofumesate)--A preemergence or preplant incorporated herbicide for sugarbeets. Fisons.

Paraquat CL (paraquat)--A nonselective contact herbicide registered for several no-till uses, soybean and sunflower desiccation and for noncropland. Chevron.

Phytar (cacodylic acid)--Nonselective contact herbicide used for weed control on noncropland.

Pre Beta 1 (pebulate + diallate)--A preplant incorporated herbicide for the control of annual grasses and certain broadleaf weeds in sugarbeets. Great Western Sugar Co.

Pre Beta 2 (cycloate + diallate)--A preplant incorporated herbicide for the control of annual grasses and certain broadleaf weeds in sugarbeets. Great Western Sugar Co.

HERBICIDE DICTIONARY--(CONTINUED)

Prefar (bensulide)--A preplant herbicide for grass and broadleaf weed control in vine crops including cantaloupe, cucumbers and watermelons. Stauffer.

Preforan (fluorodifen)--Used preemergence in soybeans. Production discontinued. Ciba-Geigy.

Premerge (dinoseb)--See Dinitro Weed Killer. Dow.

Princep (simazine)--A long lasting preemergence or preplant herbicide for corn. Also used for weed control in shelterbelts and for dormant season weed control in alfalfa. Ciba-Geigy.

Probe (methazole)--A broad spectrum herbicide for sorghum and soybeans **under development**. Preplant, preemergence and postemergence. Velsicol.

propachlor--Active ingredient in Ramrod and Bexton. Farmland markets the herbicide using the common name propachlor. Available as a 20% granule and a 65% wettable powder for grass weed control in corn and sorghum. Bexton liquid formulation available. Monsanto, Dow, Farmland.

propazine--See Milogard. Sold as Propazine 80W by Farmland.

Prowl (pendimethalin)--Used preemergence on corn, and preemergence or ppi on soybeans grown on soils with more than 1.5% organic matter. American Cyanamid.

Pyramin (pyrazon)--Used for preemergence broadleaf weed control in sugarbeets. Often combined with other herbicides. BASF-Wyandotte.

Ramrod--Trade name for propachlor. Monsanto.

Ramrod-atrazine 69W and flowable--A combination of Ramrod and atrazine used for broad spectrum weed control in corn and sorghum. Monsanto.

Randex (CDAA)--A preemergence grass herbicide for corn, sorghum and soybeans grown for seed. Randex T for use on corn only, combines Randex with TCBC for improved broadleaf weed control. Monsanto.

Ro-Neet (cycloate)--A preplant incorporated herbicide used in sugarbeets for the control of annual grasses and some broadleaf weeds. Stauffer.

Ronstar (oxadiazon)--A preemergence herbicide for annual grass and broadleaf weed control in soybeans and turf. Rhodia.

Roundup (glyphosate)--A postemergence nonselective translocated herbicide which will control annual and perennial grasses and broadleaf weeds. No soil residual. Monsanto.

Rowtate (isaniline)--An experimental preemergence herbicide being developed for annual broadleaf weed control in soybeans. Diamond-Shamrock.

Rydex (prodiamine)--A preplant soil incorporated herbicide under development primarily for annual grass control. U.S. Borax.

Salvo--A low volatile ester formulation of 2,4-D. Olin.

Sencor--Trade name for metribuzin. Chemagro.

Silvex (2,4,5-TP)--A phenoxy herbicide used for the postemergence control of broadleaf weeds and woody plants. Used on grazing land and in turf. Controls some weeds resistant to 2,4-D. Amchem, Dow.

Sinbar (terbacil)--A herbicide for dormant season control of annual grass and broadleaf weeds in established alfalfa. DuPont.

Spike (tebuthiuron)--Used for total vegetation control and for selective brush control in grassland. Elanco.

Surflan (oryzalin)--A new preemergence herbicide for the control of annual grasses in soybeans. Often used in combination. Elanco.

Sutan⁺ (butylate + R-25788)--A preplant incorporated herbicide for the control of annual grasses in corn. Stauffer.

2,4,5-T--A phenoxy herbicide used for the control of brush and woody plants on grazing land and in noncrop areas. Many trade names. Amchem, Dow.

TCA--A postemergence herbicide for the control of annual and perennial grasses on noncropland; also preemergence in sugarbeets. Dow.

Telone (dichloropene)--A fumigant used preplant for the control of quackgrass in potatoes. Dow.

Telvar (monuron)--Used for long term vegetation control in noncropland. Discontinued. DuPont.

Tenoran (chloroxuron)--For early postemergence use in soybeans. Weeds must be less than 1.5" (3.8 cm) tall. Ciba-Geigy.

Tillam (pebulate)--Registered preplant incorporated for annual grass control in sugarbeets. Stauffer.

Tolban (profluralin)--A preplant incorporated herbicide used primarily for annual grass control in soybeans and alfalfa. Ciba-Geigy.

Tordon (picloram)--A postemergence herbicide for the control of annual and perennial broadleaf weeds. Residues may last for several years in the soil. Dow.

Treflan (trifluralin)--A preplant incorporated herbicide used in soybeans for the control of annual grasses. Elanco.

Trysben (2,3,6-TBA)--Used for the non-selective control of perennial broadleaf weeds in noncropland. DuPont.

Velpar--Used for non-selective postemergence weed control on noncropland and Christmas tree plantings. DuPont.

Vernam (vernolate)--A preplant incorporated herbicide used in soybeans. Effective against annual grasses and some broadleaf weeds. Early injury usually not reflected in crop yields. Stauffer.

Weedazol--Trade name for amitrole. Amchem.

CLEANING THE SPRAYER

First rinse the sprayer with a material which acts as a solvent for the herbicide. Kerosene and fuel oils carry away oil-soluble herbicides such as 2,4-D ester. Chemicals which form emulsions when mixed with water are oil-soluble. After the oil rinse, a rinse with water containing detergent will help remove the oil. Oil-soluble herbicides are the most difficult to remove. 2,4-D amine salts are water-soluble.

For most water-soluble herbicides repeated rinsing with water is usually enough. Hormone type require extra precautions. If 2,4,5-T, silvex, Banvel, or 2,4-D were used, fill the tank with water and ammonia. Add household ammonia at the rate of 1 quart (0.95 l) of household ammonia to 25 gallons (95 l) of water. Pump enough solution through the hose and nozzles to fill these parts completely. Then fill the tank, close, and leave for 24 hours before rinsing thoroughly with water.

Activated charcoal can be used after the preliminary rinsing to decontaminate the sprayer. A 3% suspension absorbs the 2,4-D. Agitate the suspension for 2 to 3 minutes and drain, then rinse thoroughly with clear water.

For wettable powder herbicides, see that none of the powder remains in the tank. A thorough rinsing with water is usually sufficient. Thoroughly clean all equipment immediately after use.

CONVERSION TABLES

NOTES

ACTIVE INGREDIENT PER GALLON CONVERSIONS

Pounds of active material per gal of commercial product	Pints of commercial product needed per acre to give the following pounds of herbicide per acre		
	1/4 lb	1/2 lb	1 lb
2.00	1	2	4
2.64	3/4	1 1/2	3
3.00	2/3	1 1/3	2 2/3
3.34	3/5	1 1/5	2 2/5
4.00	1/2	1	2
6.00	1/3	2/3	1 1/3

METRIC CONVERSIONS

Symbol	When you Know	Multiply By	To Find	Symbol
lb	pounds	0.45	kilograms	kg
pt	pints	0.47	liters	l
qt	quarts	0.95	liters	l
oz	ounces	30	milliliters	ml
acre	acres	0.4	hectares	ha
ha	hectares	2.5	acres	

Conversions in this bulletin are pounds per acre to kilograms per hectare. Example: 2 lb/A to kg/ha = $2 \times 0.45 = 0.90$ kg/A $\times 2.5 = 2.25$ kg/ha.
