# NEBRASKA CORN HYBRID TESTS 1995

Nebraska Cooperative  
Extension Service  
Extension circular  
Received on: 01-10-96  
University of Nebraska,  
Lincoln -- Libraries

**University of Nebraska—Lincoln  
Institute of Agriculture and Natural Resources  
Agricultural Research Division  
Cooperative Extension**

Issued in furtherance of Cooperative Extension work, Acts of May 8 and June 30, 1914, in cooperation with the U.S. Department of Agriculture. Kenneth R. Bolen, Director of Cooperative Extension, University of Nebraska, Institute of Agriculture and Natural Resources.

## EXTENSION CIRCULAR 95-105

## NEBRASKA CORN HYBRID TESTS

December 1995

## AUTHORS

Lenis A. Nelson	Department of Agronomy, Lincoln
David L. Holshouser	Northeast Research and Extension Center, Concord
Roger W. Elmore	South Central Research and Extension Center, Clay Center
Paul T. Nordquist	West Central Research and Extension Center, North Platte
Robert N. Klein	West Central Research and Extension Center, North Platte
David D. Baltensperger	Panhandle Research and Extension Center, Scottsbluff
James Krall	Torrington Research and Extension Center, Torrington, WY

## ACKNOWLEDGMENT

This circular is a progress report of corn hybrid performance tests conducted by the Agronomy Department and the Northeast, South Central, West Central and Panhandle Research and Extension Centers. Conduct of experiments and publication of results is a joint effort of the Agricultural Research Division and the Cooperative Extension Service. Tests were supported in part by fees paid by hybrid seed corn producers.

Acknowledgment is made to Extension Agents and others who assisted in these trials. Special credit is due to farmers who furnished test sites. Yield and other statistical calculations were performed by the Biometrics and Information Systems Center.

We also want to acknowledge the efforts made by our research technologists and technicians. Glen Frickel, Don Thrailkill, Greg Dorn, George Hoffmeister, Bobby Skates, Ray Brentlinger, Lisa Lunz, Ralph Klein, and John A. Eis are to be commended for their efforts.

We acknowledge the State Climate Program at the University of Nebraska-Lincoln for providing the climate data used in this report. We also want to thank the Nebraska Agricultural Statistics Service for crop data.

## METRIC EQUIVALENTS

1 centimeter = 0.394 inches	cm = inches x 2.54
1 hectare = 2.471 acres	ha = acres x 0.405
1 kilogram = 2.205 pounds	kg = pounds x 0.454
1 hectoliter = 2.838 bushels	hl = bushels x 0.352

Kilogram/hectoliter = lb/bu x 1.287

Kilograms/hectare = bu/A x 62.78 (56# bu)

# NEBRASKA CORN HYBRID TESTS

1995

Corn production as of November was forecast at 865,800,000 bushels at 111 bu/a. Irrigated corn was 130 bu/a below last years yields of 151 bu/a. Dryland corn production was 70 bu/a. Past corn yields are reported as followed (bu/a):

	1988	1989	1990	1991	1992	1993	1994	1995
State	124	120	130	127	132	108	138	111
Irrigated	146	142	148	150	144	117	151	130
Nonirrigated	73	67	89	77	107	91	112	70

Total acreage for harvest was 7,800,000 of which 5,375,000 was irrigated. Nonirrigated acreage was 2,425,000.

## 1995 Crop Production Summary

On May 8, wet, cool conditions continued to delay spring field work with corn only 5% planted. Last year 54% had been planted and 48% for the five year average. Temperatures averaged five to ten degrees below normal. By May 21, corn planting made excellent progress with 64% planted. This compares with 99% last year and 90% for the five-year average. Southeast counties were only 35% planted. Temperatures were one to four degrees below normal. By June 11, temperatures averaged from four degree to ten degrees below normal. Corn conditions were rated at 1% very poor, 12% poor, 51% fair, 35% good, and 1% excellent. Corn was 99% planted with 85% emerged state wide. By June 25, hot, dry weather conditions continued to improve rapid crop development. Corn conditions were 55% good to excellent, 40% fair, and 5% poor to very poor. By July 9, temperatures statewide were near normal to slightly above. Cultivation and chemical weed control continued. First generation corn borer in early planted east central fields, were high enough to justify treatment. By July 30, all corn conditions were rated at 3% very poor, 11% poor, 36% fair, 46% good, and 4% excellent. Average temperatures for the

week were one to five degrees above average. Precipitation amounts ranging from zero up to over two inches. August 27, the week was very hot and humid with temperatures six to eleven degrees above normal. Corn conditions were rated 3% very poor, 10% poor, 36% fair, 46% good and 5% excellent. Crop was 64% in the dough stage or beyond compared with 99% last year and 85% average. Corn development was about 12 days behind normal. Treatment of fields for second generation corn borer and other pests continued. September 24, temperatures averaged ten to fourteen degrees below normal across state. Freezing temperatures Sept 21 ended the growing season and damaged late maturing crops. Corn was rated 3% very poor, 15% poor, 35% fair, 44% good, and 3% excellent. Irrigated corn conditions was rated 59% good or excellent while dryland corn rated 25% good or excellent. Maturity was rated at 30%, compared with 89% last year and the five-year average of 63%. Oct. 22, favorable weather conditions permitted rapid harvesting progress. Corn harvest was rated at 34% complete, compared with 54% last year and a five-year average of 50%. Corn stalk breakage was reported above the ear in

most fields. Dropped ears due to corn borer infestations and potential lodging from winds were reported.

Thirty two corn performance tests were planted in 1995. Test locations are shown on the map (page 13). Table A (page 14-15) consists of cooperators, dates of planting and harvesting.

Corn trials are conducted to provide yield and other information about corn hybrids which may be offered for sale in Nebraska. A fee from seed producers covers a portion of the cost of establishing each test. Entry was on a voluntary basis and hybrids were selected by seed producers. Entries are limited to five hybrids at each location in the eastern half and six hybrids in the western half. At the Southeast, South Central, Northeast, West Central Perkins county locations, widely grown hybrids were entered by the Agronomy Department.

Table B (page 16) shows the average performance of all hybrids at each test location. Individual plots are two rows wide and from 15 to 35 feet long. Some experiments were planted thick and later thinned to the desired stand. Each test location had a specific number of seed planted for all hybrids. The plant population represents the average harvested plant density. Performance of hybrids common to each area over a five-year period is shown in Table C (page 17). Temperature and rainfall data are shown on pages 55. The names of the entrants and their addresses are listed in Table D (page 18). Table E (page 19), lists brand name and hybrids of the entrant. The authors acknowledge the State Climate Program at the University of Nebraska-Lincoln for providing climate data and information used in this study.

Grain yields are expressed on a 15.5% moisture basis. Yields shown are averages of four or more replicated plots at each location. Plots were machine harvested and

grain moisture determinations were made on each plot with an electronic moisture meter.

Variations in soil fertility, moisture conditions and other factors are found in each test area. This makes it impossible to measure yielding ability of hybrids with absolute accuracy. For this reason, small yield differences have little meaning. A statistical measure of differences required for significance is given in each table. These differences are computed at the 5% and 25% levels of significance. At the 5% level, a difference of that magnitude would be expected once in twenty trials through chance alone. At the 25% level, a difference as large or larger would be expected by chance alone in one of four trials.

In these experiments, many hybrids had essentially the same grain production. Performance of hybrids varied with seasonal conditions. Great care should be used interpreting the results of a single year test. Earlier maturing hybrids are favored in some seasons while later ones perform best in others. Some hybrids are able to withstand unfavorable weather conditions better than others which may do well under better growing conditions. Performance over a period of years should give a much better measure of adaptation. Harvest moisture, stalk strength, and resistance to insect and disease also are factors which must be considered in selecting hybrids.

## Results

Relative hybrid performance often varies with locations within zones. Number of experiments conducted at each location in following zones were: Southeast Dryland-2, East Central Dryland-2, Southeast Irrigated-2, South Central-4, Northeast Dryland-1, Northeast Irrigated-1, Central Irrigated-2, Central Irrigated-White corn- 1, West Central Irrigated-2, West Central Pivot Irrigated Perkins County-1, Southwest Irrigated-2, Southwest Ecofallow-2, West Central Ecofallow-2, North Central Irrigated-2, West Valley Irrigated-2, West Table Irrigated-2, West & West Central Short Season Ecofallow-2, Torrington, Wyoming Irrigated-1.

In zone analyses, the hybrid by location mean square was used to calculate the differences required for significance shown in the tables. The correlation or  $r$  value for the relationship between grain moisture and yield is shown in Table B (page 16). Moisture at harvest is an important consideration in hybrid selection as it does affect time of harvest and drying costs.

### Southeast Dryland

Two trials no-tilled were harvested with seventy-two hybrids (pages 20-21). The Gage county trial had very good moisture from germination to harvest. Very good weed control throughout the growing season. The farmer entry and yield are Dekalb 580 @ 134 bu/a. Average of all entries of 134 bu/a. The Cass county test was under some stress do to a lack of moisture during hot summer days. Farmer entries and their yields were Land O'lakes @ 125 bu/a, Pioneer 3375 @ 126 bu/a and Northrup King N7590 @ 114 bu/a. Average for all entries was 122 bu/a. Period-of-years data are shown on pages 22-23.

### Southeast Irrigated

Two trials were planted in this area with ninety-two hybrids each (pages 24-25). The Butler county corn plot had a cool, wet spring. Possible soil compaction from disking the plot wet, slow plant growth, smaller plants, corn borer activity and early freeze caused lower yields. Farmer entry and yield was Ciba 4495 @ 146 bu/a. Average of all entries was 145 bu/a. The Hamilton county test plot had some late season weed pressure and a hard freeze Sept 21. Average for all entries was 167 bu/a. Period-of-years data are shown on pages 26-27.

### East Central Dryland

Two trials (no-tilled) were harvested with sixty-four hybrids (pages 28-29). Cuming county was under considerable amount of moisture stress during summer and fall. The farmer entries and respective yields were Northrup King 6233 @ 111 bu/a, Northrup King N5866 @ 96 bu/a, Golden Harvest H2530 @ 96 bu/a, Golden Harvest H2485 @ 84 bu/a. Average for all entries was 93 bu/a. Washington county plot was under moisture stress. Small plants, wind damage caused lodging. Farmer entries were Stine 1131 @ 125 bu/a, Stine 1133 @ 110 bu/a, Cargill 6303 @ 112 bu/a. Average for all entries was 104 bu/a. Period-of-years data are shown on pages 30.

### South Central Irrigated

Test plots were located in Clay and Phelps counties. They planted eighty-eight hybrids in each test (pages 31-32). Clay county furrow irrigated plot had an average for all entries of 160 bu/a. Early freeze Sept 21. Phelps county plot was dropped due to agronomics and chemical problems. Period-of-years data are shown on page 33.

### **Northeast Dryland**

Sixty-four hybrids were included in a dryland test in Dixon County. It was a cool, wet, April and May. Turning extremely hot, dry, in late June, July and August. Early frost, Sept 21, shortened the growing season. The insecticide applied at planting did not adequately control corn rootworm. There was visual signs of damage especially in the first two replications of the test plot. In Northeast Nebraska the corn on corn stubble performed poorly compared to the corn on soybean residue. This plot was not an exception as evidence by the lower corn yields. Average yield of all the entries were 35 bu/a. No data from this test are reported due to its extreme variability.

### **Northeast Irrigated**

Holt County with seventy-two hybrids were included in a pivot irrigated plot (pages 34-35). This plot experienced the cool, wet spring and hot, dry summer with the early frost September 21. Before this plot could be harvested it received 11 inches of wet snow, delaying harvest until the snow melted. Average for all entries were 102 bu/a. 2-, 3-, 4-, and 5-year yields are shown on page 36.

### **West Central Ecofallow**

Two plots were seeded into stubble from a wheat crop (page 37). These trials were planted in Lincoln and Perkins counties. Lincoln county with 6 hybrids averaged 69 bu/a. Very cold, wet Conditions early in growing season but turned hot, dry during later part of season. Crop was pretty well dead from dry conditions prior to frost on Sept 21. Perkins county 16 entries with ten entries entered by UN-L Agronomy Department. Farmer entries are Pioneer X1083X @ 74 bu/a and 3514 @ 75 bu/a. Mid July hail storm ripped leaves up.

### **Central Irrigated**

Sixty-three hybrids were tested in Custer and Dawson counties. The Furrow irrigated Custer county test plot averaged 134 bu/a. Farmer entries were DeKalb 580 @ 145 bu/a and Pioneer 3769 @ 120 bu/a. The furrow irrigated Dawson county test averaged 165 bu/a. Farmer entries were BoJac 577 @ 167 bu/a and BoJac 580 @ 191 bu/a. The data from these plots are shown on pages 38-39. Over year data are shown on page 40.

### **West Central Irrigated**

Yield and other data from forty-five hybrids tested in Lincoln and Dundy counties are shown on page 41. Lincoln county furrow irrigated test had high yields averaging 189 bu/a. It was very cold and wet early in season taking 17 days for first emergence of plants to occur. Very hot later in season requiring weekly irrigations. Killing freeze occurred on Sept 21. Several full season hybrids didn't quite make it but overall yields were very good. Dundy pivot irrigated test averages for all entries were 172 bu/a. The farmer entries were BoJac 602 @ 174 bu/a and Golden Harvest 2493 @ 172 bu/a. Period-of-years data are shown on page 42.

### **Southwest Ecofallow**

Seventeen hybrids were tested in Hayes and Red Willow counties. Hayes county ecofallow corn test averaged 63 bu/a. Many hybrids had not reached maturity at first killing frost. Farmer entries were Pioneer 3475 @ 62 bu/a and 3563 @ 78 bu/a. Red Willow county ecofallow averaged for all entries were 33 bu/a. Very wet spring delayed planting, then no rain during most of the growing season. One stretch of 64 days was without precipitation. Replanted some plots by hand due to ground squirrel eating seed. The data from these two locations and five year tests are shown on page 43.

### **Southwest Irrigated**

Fifty-three hybrids were tested at two sites. Furnas county furrow irrigated plot had an average for all entries of 157 bu/a. Most hybrids matured before first frost. Farmer entries NC+ 5858 @ 138 and NC+ 6414 @ 141 bu/a. Red Willow county furrow irrigated plot averaged 176 bu/a. Almost all hybrids reached maturity before killing frost. The farmer entries and yields were Golden Harvest Ex 572 @ 173 bu/a and Pioneer 3346 @ 175 bu/a. Data for this location are shown on pages 44-45 and 46 for the over years data.

### **North Central Irrigated**

Twenty-seven hybrids were entered in gravity and center pivot plots in Brown county which is located in the northern part of the sandhills. Furrow irrigated test had an over all average of 143 bu/a. Farmer entries Curry 2110 @ 128 bu/a and Golden Harvest 2390 @ 137 bu/a. The Pivot irrigated plot averaged 130 bu/a. Farmer entries were Coop 2021 @ 66 and Coop 7400 @ 134 bu/a. Cool and wet conditions delayed planting. Many hybrids did not reach maturity. The 1995 data will be on page 47 and 1990-1995 data will be on page 48.

### **West Central Pivot Irrigated**

Thirty-two hybrids were included in Perkins county center pivot irrigated plot. Average for all varieties was 143 bu/a. Farmer entries were Golden Harvest E572 @ 158 bu/a and Pioneer 3769 @ 123 bu/a. Data for this plot is shown on page 49. The two year averages are on page 50.

### **West Valley Irrigated**

The Scotts Bluff County plot with fourteen hybrid entries was pivot irrigated. Average for all entries were 150 bu/a. Planting was delayed because of a very wet spring. The development of the crop was

behind normal all year. A very warm early autumn helped considerably, until a killing freeze on Sept 21. The Morrill County plot was irrigated with a center pivot. Average of all entries were 152 bu/a. Planting was delayed because of wet spring. Fourteen hybrids were entered into the Torrington test. Average of all plots were 127 bu/a. Farmer entries were Cargill X2507 @ 137 and 3677 @ 134 bu/a. Even with a late planting date, emergence was very slow due to cool soil temperatures. The development of the crop was behind normal all year. A very warm early autumn helped the development greatly, until a killing frost on Sept 21. Data shown on page 51. Period-of-years yield and other data are shown on page 52.

### **West Table Irrigated**

Irrigated trails were in Box Butte and Cheyenne. Two plots were center pivot irrigated with 15 hybrids at each location (page 53). Sites represent higher elevation land which requires an earlier maturing hybrid than valley land. Box Butte farmer entries were Cargill X1407 @ 114 bu/a, X2403 @ 114 bu/a and 3677 @ 107 bu/a. Average of all varieties were 114 bu/a. Cheyenne county average were 107 bu/a. Planting at both plots was delayed because of a very wet spring. Even with this late planting date, emergence was very slow due to cool soil temperatures. The development of the crop was behind normal all year. A very warm early autumn helped considerably, until a killing freeze on Sept 21. This is the fourth year for this plot. Period-of-years averages are included on page 53.

### **Early Maturing Ecofallow**

Plots planted in Lincoln and Cheyenne counties were designed to test six of the earlier hybrids in an ecofallow system. Rotation system was fallow-winter wheat-corn planted into the standing wheat stubble. Lincoln county test plot averaged 80 bu/a for all entries. Very cold, wet conditions in

early growing season and hot, dry conditions later in season. Crop pretty well dead from dry conditions prior to frost Sept 21. The Cheyenne county plot averages of all entries were 44 bu/a. Planting was delayed because of a very wet spring. Even with this late planting date, emergence was very slow due to cool soil temperatures. The development of the crop was behind normal all year. A very warm early autumn helped considerably, until a killing freeze on Sept 21. Results of two tests and period-of-years are shown on page 54.

#### **South Central Yellow Wax Corn Test**

Thirteen entries were in the test. Linear move, overhead sprinkler irrigation system was used. The plot was planted into soybean stubble. Hard freeze Sept 21. Average yields of all entries were 138 bu/a. 30" planter with ALMACO cone units. The plots are 2 row by 24 feet. Data from this plot are shown on page 56. Two year averages are shown on page 57.

#### **South Central White Corn Test**

Clay county plot included sixty-eight white hybrids and three yellow checks. Corn-soybean rotation using Solid set, overhead sprinkler irrigation system. Slot planted into bean stubble on ridges. Average of all entries were 106 bu/a. Hard freeze Sept 21. Data from the plot will be on pages 58-59. Over year data are shown on page 60-61.

#### **Dawson County White Corn Test**

Eighty-one entries were entered in this first year test. Results are found on pages 62-63.

## Cultural Practices

**Gage:** Dryland. Fall, disked wheat stubble. No till in the spring. Crop history: 1993 wheat, 1994 wheat. 140 lbs of 82% N preplant. Herbicide: 4 lbs Extrazine. Insecticide: None. Cultivations: None. Hand hoed plot. This plot had 203 lb/a of residual N.

**Cass:** Dryland. No till. Previous crops: 1993 corn, 1994 soybeans. Preplant: Anhydrous 150 lbs. Herbicide: Extrazine 2.67 lbs, Harness Extra 1 pt. Insecticide: 4 oz. of Pounce. Cultivation: None. Hand hoed plot. This plot had 45 lb/a of residual N.

**Cuming:** Dryland. No till. Previous crops: 1993 corn, 1994 soybeans. Preplant: 100 lbs of 28% N. Herbicide: Lasso, Broadstrike. Insecticide: None. This plot had 99 lb/a of residual N.

**Washington:** Dryland. No till. Previous crops: 1993 corn, 1994 soybeans. Fertilizer: Fall of 1994 20-50-50 lb/a, at planting 105 lb/a N. Herbicide: Guardsman 4 pt, 2,4-D 1 pt. 42 lb/a of residual N.

**Butler:** Pivot Irrigated. Previous crops: 1993 corn, 1994 soybeans. Preplant: 98 lbs of anhydrous ammonia. Herbicide: Atrazine. Insecticide: None. Hand hoed plot. This plot had 64 lb/a of residual N. Disked prior to planting.

**Hamilton:** Gravity Irrigated. Previous crops: 1993 soybean, 1994 corn. Fertilizer: 205 lb/a anhydrous ammonia, 4 gal 9-18-9 starter, 1 lb/a zinc. Herbicide: 1 qt Broadstrike + Dual, banded on 5/15/95. Insecticide: Force banded 3 lb/a. Cooperator ridge tilled ahead of slot planter.

**Clay:** Gravity Irrigated. Crop history: 1993 corn, 1994 soybeans rotation. Applied 125 lb/a anhydrous ammonia preplant. Herbicide: 1 qt Roundup, 1 pt 2,4-D preplant on 4/27. 2.2 qt Surpass 100, preemergence on 5/17.

Insecticide: None. Slot planted into bean stubble on ridge.

**Phelps:** Irrigated. Plot dropped due to agronomic and chemical problems.

**Dixon:** Dryland. Crop history: 1993 corn, 1994 corn. Applied 90 lb/a anhydrous ammonia preplant. Herbicide: Harness Plus at 2.25 pt/a and Roundup 1 pt/a at planting, and 2 pt/a Buctril/Atrazine was applied two weeks after planting. Insecticide: Lorsban (8 oz/1000 ft of row). Considerable rootworm damage. Data not included.

**Holt:** Pivot irrigation. Crop history: 1993 and 1994 corn. Fertilizer: 50 lb N + 48 lb P + 10 K + 10 lb S at planting. Side dress: 120 lb/a anhydrous ammonia. Herbicide: 4.1 pt Sutan + 1.2 lb Atrazine before planting. Later applied 2/3 oz Accent. Insecticide: Lorsban (8 oz/1000 ft of row) at planting. July applied 1 qt extra Lorsban.

**Custer:** Furrow Irrigated. Crop history: 1993 and 1994 corn. Preplant 180 lb/a nitrogen as anhydrous ammonia. At planting: 14.3 lb N + 48.5 lb P + 10.7 lb S + .36 lb Zn as starter. Sidedressed: 30 lb N + 5 lb S in irrigation water. Herbicide: Surpass 100 preplant incorporated. Insecticide: Lorsban 15G, Furadan just ahead of hilling. Disked twice and planted.

**Dawson:** Furrow Irrigated. Crop history: 1993 and 1994 corn. Preplant: 175 lb/a of N. At planting: 6 gallons of 10-34-0 and 4 gallons of 28-0-0 as starter. Herbicide: Bicep II at 1 qt/a in 18" band at planting. Insecticide: Lorsban 15G 8 oz/1000 row feet. Dyfonate 15G application at cultivation. Pencap application after tassel. Ridge planted into stalks.

**Furnas:** Gravity Irrigated. Crop history: 1993 soybean, 1994 soybeans. Applied 150 lb/a N broadcast. 8 lb N + 27 lb P + 1 lb Zn

as starter. Herbicide: 2.4 qt/a of Bicep II preplant. Banvel, 1/2 pt at 4 leaf stage. Insecticide: Lorsban 15G at 8 oz/1000 ft of row. Pencap M for corn borer, Dipel @ 4 lb/a at hilling. Ridge till.

**Red Willow:** Gravity Irrigated. Crop history: 1993 and 1994 corn. Preplant: 120 lb/a N preplant + 10 gal/a 10-34-0 as starter. Herbicide: Lasso 2.5 qt/a in a 14" band, Broadcast 1/2 pt Banvel + 1.5 lb Atrazine at spike stage. Insecticide: Counter 15G at 7.3 lb/a. Ridge till into stalks.

**Perkins:** Center Pivot Irrigated: Crop history: corn 1993, corn 1994. Preplant: 180 lb/a nitrogen as anhydrous ammonia. At planting: 150 lb of 8-20-5-5-.5. Herbicide: 2 qt Bicep II, plus 2 pt Marksman with the planter. Insecticide: Parathion for Western Bean Cutworm Beetle in August. 1/2 pt Lorsban through pivot on Aug 10. Ridge till into stalks.

**Hayes:** Ecofallow. Crop history: 1993 fallow, 1994 winter wheat. Preplant: 65 lb N. At planting: 60 lb N + 0 + 6 lb K + 11 lb S + .7 lb Zn. Herbicide: Fall of 1994 applied 2 lb Atrazine + 80 oz Landmaster + 1 qt COC. Preemergence: 2 qt Bladex + 3 pt Marksman. Insecticide: Lorsban 15G 8 oz/1000 row feet.

**Red Willow:** Ecofallow. Crop history: 1993 fallow, 1994 winter wheat. Applied preplant 75 lb/a N. Herbicide: Preplant 1/2 lb Atrazine + 2.25 pt Dual II. Insecticide: Lorsban 15G 8 oz/1000 row feet. No-till planted into wheat stubble.

**Lincoln:** Ecofallow. Crop history: 1993 fallow, 1994 winter wheat. Applied 60 lb/a N preplant. Herbicide: Atrazine + Paraquat on wheat stubble in fall. Landmaster prior to planting. Insecticide: None. No-till into wheat stubble.

**Perkins:** Ecofallow. Crop history: 1993 fallow, 1994 winter wheat. Applied 67 lb/a N as starter. Herbicide: Fall 1994 Roundup +

2,4-D after winter wheat harvest. Roundup + Atrazine in the fall of 1994. Preplant: Harness Extra preemergence at 2.3 qt/a. Insecticide: Lorsban 15G (8 oz/1000 row feet) T-band in furrow at planting. No-till into wheat stubble.

**Brown:** Furrow Irrigated. Crop history: 1993 corn, 1994 corn. Applied 20 lb/a N + 12 lb/a P + 12 lb/a S at planting. Sidedressed 170 lb/a N as anhydrous ammonia. Herbicide: Bicep 2.4 qt/a broadcast and incorporated with a disk. Insecticide: Force at 4.3 lb/a. Pencap M for corn borer in late July. Disked twice and planted.

**Brown:** Pivot Irrigated. Crop history: Corn 1993, corn 1994. At planting: 10-30-0-7 at 7 gal/a. 12-0-0-26 at 3 gal/a. Sidedressed: 110 lb/a N as anhydrous ammonia. Herbicide: Bicep 2.4 qt/a preemergence. Insecticide: 4.5 lb/a Force and Lorsban 15G at 8.7 lb/a at planting. Ridge till into corn stalks.

**Lincoln:** Irrigated. Crop history: 1993 corn, 1994 sorghum. Applied 180 lb/a N as anhydrous ammonia. Sidedressed: 8 gal of 10-34-0+1% zinc. Herbicide: Landmaster preemergence. Insecticide: None.

**Dundy:** Pivot Irrigated. Crop history: 1993 corn, 1994 corn. At planting: 32 lb N + 57 lb P + 24 lb K + 14.5 lb S. Through the pivot: 110 lb N + 21 lb S + 23 lb Zn. At cultivation: 63 lb N + 11 lb S. Herbicide: 2 pt of Marksman + Atrazine 1/2 lb/a preemergence. 2/3 oz Accent + 8 oz Tough post-emergence. Insecticide: Lorsban 15G T-band at 8 oz/1000 row feet at planting. Full Bac at 10 lb/a for 1st generation corn borer on 7/14/95. 2 pt/a Pencap M for rootworm beetles 8/7/95. Tillage program: Disked twice and planted.

**Box Butte:** Pivot Irrigated. Crop history: 1994 corn. Applied at planting: 25 lb N, 40 lb P, 1 lb/a Zinc. Sidedressed: 100 lb/a N. Herbicide: Dual. Insecticide: Counter.

**Cheyenne:** Pivot Irrigated. Crop history: 1994 sunflowers. Preplant: 20 tons manure (60 lb N). At planting: 10 lb N + 24 lb P + 7 lb S + 5 lb/a Zinc. Herbicide: 1 lb Atrazine, 3/4 qt Dual, 1 pt 2,4-D. Insecticide: None.

**Scotts Bluff:** Pivot Irrigated. Crop history: 1994 sorghum. At planting: 10 lb N + 34 lb P + 1 lb Zinc/a. Sidedressed: 150 lb N (ammonium nitrate). Herbicide: 2 qt lasso 4EC, 1 qt Bladex 4L. Insecticide: none.

**Morrill:** Pivot Irrigated. Crop history: 1994 alfalfa. Preplant: 7 lb S + 7 lb K. At planting: 15 lb N + 50 lb P + 1 lb Zn/a. Side dressed: 50 lb/a Nitrogen. Herbicide: Lasso + Bladex banded. Insecticide: Counter at planting.

**Torrington, WY:** Pivot Irrigated. Applied 100 lb N + 40 lb P/a on April 13. Herbicide: 1 qt Dual/a on May 19. 1.5 qt bladex/a on May 22. Insecticide: 6.5 lb/a Counter on May 18.

**Lincoln:** Early Maturing Ecofallow. Crop history: 1993 fallow, 1994 winter wheat. Applied 60 lb/a N preplant. Herbicide: Atrazine + Paraquat on stubble in fall. Landmaster prior to planting. Insecticide: None.

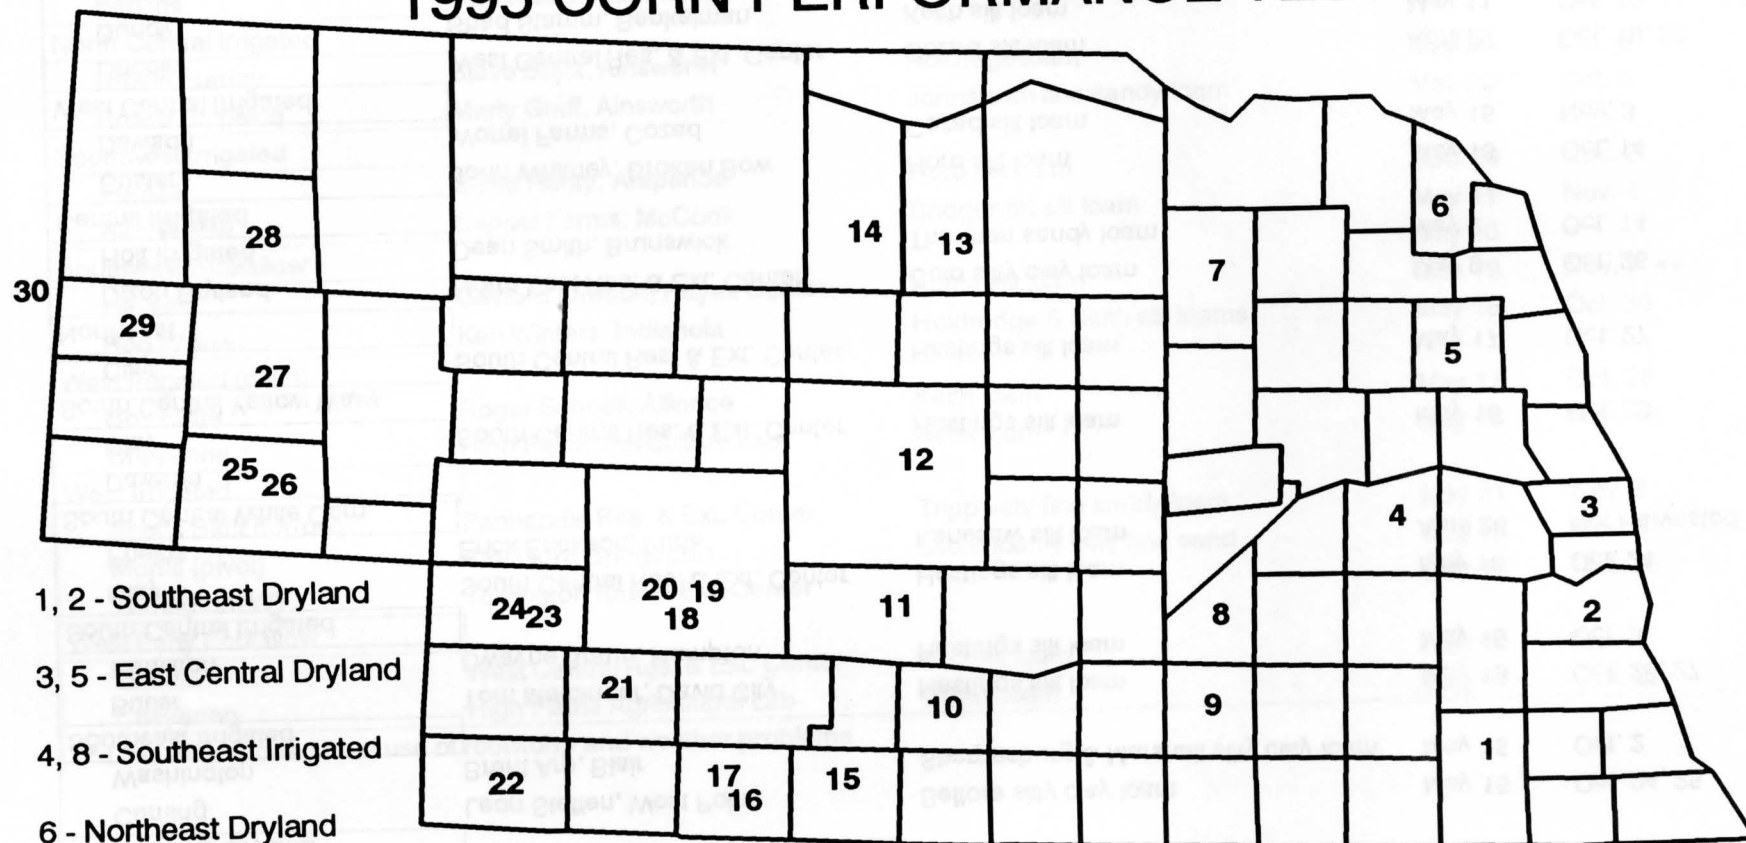

**Cheyenne:** Early Maturing Ecofallow. Crop history: 1993 fallow, 1994 winter wheat. Applied 60 lb/a N preplant. Planting 10 lb/a N + 24 lb/a P + 7 lb/a S, + .5 lb/a Zn. Herbicide: 1.5 pt/a Dual + 1 lb/a Atrazine. Insecticide: None.

**Clay:** White corn. Solid set overhead sprinkler irrigation system. Crop history: 1993 corn, 1994 soybean. Fertilizer: 75 lb/a nitrogen. Preemergence: 5/18/95 2.2 qt Surpass, 1 pt Roundup, 1/2 pt Banvel. 6/21/95 .38 oz Beacon, .32 oz Accent. Insecticide: None. Slot planted into bean stubble.

**Clay:** Yellow waxy corn. Linear move, overhead sprinkler irrigation system. Crop history: 1993 corn, 1994 soybean. Fertilizer: 100 lb/a anhydrous ammonia. Preemergence Herbicide: 2.2 qt Surpass 100, 1/2 pt Banvel/a on 5/19.

# NEBRASKA CORN TEST LOCATIONS

## 1995 CORN PERFORMANCE TESTS

1, 2 - Southeast Dryland

3, 5 - East Central Dryland

4, 8 - Southeast Irrigated

6 - Northeast Dryland

7 - Northeast Irrigated

9, 10 - South Central Irrigated

11, 12 - Central Irrigated

13, 14 - North Central Irrigated

15, 16 - Southwest Irrigated

17, 21 - Southwest Ecofallow

18, 22 - West Central Irrigated

19, 23 - West Central Ecofallow

20, 25 - West Early Ecofallow

24 - Perkins Pivot Irrigated

26, 28 - West Table Irrigated

27, 29, 30 - West Valley Irrigated

**Table A. Locations, Cooperators, Soil types and Planting and Harvest dates. 1995.**

Location	Cooperator	Soil Type	Planted	Harvested
<b>Southeast Dryland</b>				
Gage	Dean Buhr, Adams	Wymore silty clay loam	May 26	Oct. 19
Cass	Jim Engelkemeir, Louisville	Sharpsburg silty clay loam	May 17	Oct. 18
<b>East Central Dryland</b>				
Cuming	Leon Steffen, West Point	Belfore silty clay loam	May 15	Oct. 24, 25
Washington	Brent Arp, Blair	Sharpsburg & Marshall silty clay loam	May 15	Oct. 2
<b>Southeast Irrigated</b>				
Butler	Tom Meidinger, David City	Hastings silt loam	May 19	Oct. 26, 27
Hamilton	Dwayne Braun, Hampton	Hastings silt loam	May 15	Oct. 9
<b>South Central Irrigated</b>				
Clay	South Central Res. & Ext. Center	Hastings silt loam	May 16	Oct. 24
Phelps	Erick Erickson, Funk	Kenesaw silt loam	April 28	Not Harvested
<b>South Central White Corn</b>				
Dawson				
Clay	South Central Res. & Ext. Center	Hastings silt loam	May 16	Oct. 29
<b>South Central Yellow Waxy</b>				
Clay	South Central Res. & Ext. Center	Hastings silt loam	May 17	Oct. 27
<b>Northeast</b>				
Dixon Dryland	North East Res. & Ext. Center	Colo silty clay loam	May 9	Oct. 25 **
Holt Irrigated	Dean Smith, Brunswick	Thurman sandy loam	May 2	Oct. 14
<b>Central Irrigated</b>				
Custer	John Whitney, Broken Bow	Hord silt loam	May 13	Oct. 14
Dawson	Worrel Farms, Cozad	Cozad silt loam	May 15	Nov. 3
<b>West Central Irrigated</b>				
Lincoln	West Central Res. & Ext. Center	Cozad silt loam	April 27	Oct. 19, 20
Dundy	Shad Stamm, Benkelman	Keith silt loam	May 11	Oct. 19
Perkins	Randy Regier, Madrid	Santanta loam	May 12	Nov. 2

<b>West Central Ecofallow</b>				
Lincoln	West Central Res. & Ext. Center	Hall silt loam	May 18	Nov. 2
Perkins	Tom Kraus, Madrid	Keith silt loam	May 16	Oct. 28
<b>North Central Irrigated</b>				
Brown Furrow	Steve Bejot, Ainsworth	Holdrege loam	May 25	Oct. 6
Brown (c. pivot)	Marty Graff, Ainsworth	Johnstown fine sandy loam	May 25	Oct. 6
<b>Southwest Irrigated</b>				
Furnas	Steve Henry, Arapahoe	Hord silt loam	April 29	Nov. 2
Red Willow	Cappel Farms, McCook	Bridgeport silt loam	May 11	Nov. 4
<b>Southwest Ecofallow</b>			May 10	
Hayes	Gaylord Lawson, Hayes Center	Kuma silt loam	May 19	Nov. 7
Red Willow	Ken Winters, Indianola	Holdrege & Keith silt loams	May 18	Oct. 30
<b>West Irrigated (pivot)</b>				
Box Butte	Roger Schnell, Alliance	Keith loam	May 17	Oct. 28
Cheyenne	High Plains Agriculture Lab	Keith loam	May 16	Nov. 18
<b>West Irrigated</b>				
Scotts Bluff (furrow)	Panhandle Res. & Ext. Center	Tripp very fine sandy loam	May 31	Nov. 8
Morrill (pivot)	Kirk Laux, Bridgeport	Otero loamy very fine sand	May 15	Nov. 8
Torrington, WY	Torrington Res. & Ext. Center		May 18	Oct. 26
<b>West Early Ecofallow</b>				
Lincoln	West Central Res. & Ext. Center	Hall silt loam	May 18	Nov. 2
Cheyenne	High Plains Agricultural Lab	Duroc loam	May 17	Oct. 29
