Nebraska’s Economic Future
Acknowledgements

Strategic Discussions for Nebraska is grateful to its funding organization – the Robert and Ardis James Family Foundation in New York. Their financial support and their guidance have made this project possible.

Strategic Discussions for Nebraska benefits from the involvement and advice of an external advisory board. We wish to express appreciation to the board members:

Jonathan Brand, J.D., President of Doane College in Crete
Dr. Eric Brown, General Manager of KRNV Radio in Lexington
Dr. Will Norton, Jr., Dean of the UNL College of Journalism and Mass Communications
Dr. Frederik Ohles, President of Nebraska Wesleyan University in Lincoln
Dr. Janie Park, President of Chadron State College, in Chadron
Harvey Perlman, J.D., Chancellor of the University of Nebraska-Lincoln
James Seacrest, Retired Newspaper Publisher, Lincoln
Jose Soto, J.D., Vice President of Affirmative Action, Equity and Diversity, Southeast Community College Area, Lincoln
Lyn Wallin Ziegenbein, J.D., Executive Director, Peter Kiewit Foundation in Omaha

We also wish to thank the ex-officio board members:

Ralph James, Executive Director of Executive Education Harvard Business School, Cambridge, Massachusetts
Dr. Robert James, President Enterprise Asset Management, Inc., New York, New York
Cathy James Paglia, Director Enterprise Asset Management, Inc., New York, New York

We hold conversations in communities throughout the state to encourage the public to become involved in improving statewide communication. Through these qualitative studies and discussions, we hope we can raise state and national awareness of important issues and how they affect Nebraska and eventually, affect public policy.

This magazine focuses on Nebraska’s economic future. It includes a summary of our findings; stories based on individual interviews; summaries of community conversations; and five articles written specifically for this magazine. The articles represent varied geographical perspectives as well as perspectives on various parts of the state’s economy.

We selected Beatrice, Columbus, Kearney, North Platte and Ord for community conversations; we also convened a focus group of University of Nebraska–Lincoln students to gain the perspective of Nebraska’s future leaders. Additionally, we visited Aurora, Falls City, Omaha and South Sioux City for photos and interviews.

This is only part of the information collected during this study. You can find more stories, photographs and video clips on our project’s website: www.unl.edu/SDN. You may access a pdf of this magazine through the website, as well as the pdf of Immigration in Nebraska.

Dear Readers:

Strategic Discussions for Nebraska is a grant-funded research project located in the University of Nebraska–Lincoln College of Journalism and Mass Communications. The project began July 1, 2007 and performs studies on topics of national interest and how they affect Nebraska and the people who live here.

We hold conversations in communities throughout the state to encourage the public to become involved in improving statewide communication. Through these qualitative studies and discussions, we hope we can raise state and national awareness of important issues and how they affect Nebraska and eventually, affect public policy.

Our first magazine, Immigration in Nebraska, was published in June 2008. It presented research and opinions collected through nearly 100 interviews in communities throughout the state.

This magazine focuses on Nebraska’s economic future. It includes a summary of our findings; stories based on individual interviews; summaries of community conversations; and five articles written specifically for this magazine. The articles represent varied geographical perspectives as well as perspectives on various parts of the state’s economy.

Nebraska’s Economic Future
Introduction

Nebraska’s Economic Future

It has been interesting to visit with individuals in various communities in Nebraska to learn their perspectives about Nebraska’s economic future. In their collective view, the economic future of Nebraska comes down to a few basic themes: agriculture, education, technology, infrastructure, leadership, statewide cooperation. And people.

Nebraskans like where they live. Young and old, they like the “sense of place” they feel here. They like being part of the legendary work ethic. They like the fact that, for the most part, they feel safe here. They like the fact that Nebraska agriculture helps to feed and power the world.

But when people from other states ask them where they’re from, they sound apologetic. The Strategic Discussions for Nebraska team heard variations on that theme everywhere we went. Caleb Pollard, Executive Director of the Ord Chamber of Commerce said it best: “we need for Nebraskans to be proud.”

Snapshot of Nebraska’s Economy

Nebraska is a conservative state, both politically and fiscally. It is constitutionally required to balance the state budget. It is also a state with only 1.7 million people, so there are few people to share the property tax burden. Additionally, Nebraska doesn’t have mineral resources that some states tax heavily, relieving the property tax burden on individuals. However, Nebraska’s sales and income taxes are about the same as its peer states, a fact that is often overlooked when people share concerns about taxes.

One of the state’s main concerns is the declining work force, particularly in greater Nebraska. This magazine contains several stories that refer to the work force shortage and the challenges faced by communities that desperately need workers.

Nebraska’s Strong Agricultural Base

Agriculture has changed in the last century, but it’s a booming business and Nebraskans are knowledgeable about those changes. They know the state is well-suited to growing high-quality crops and animals, and they know people in the rest of the world want to buy them. They know the University of Nebraska’s research has been important for Nebraska agriculture, Nebraska exported nearly $5.5 billion dollars worth of agricultural and manufactured goods in 2008. That’s up from $3.6 billion in 2006 and $4.2 billion in 2007. According to Greg Ibach, Director of the Nebraska Department of Agriculture, exports bring the state a steady flow of domestic and international sales and allow the state to remain strong despite financial cycles that affect the U.S. and other countries. Nebraska is fortunate to have not only the natural resources to produce some of the best agricultural products – and can source the needed parts and material for the manufactured products – but also has the people with the needed background, knowledge, experience and work ethic to produce the quality products, Ibach said.

Importance of Education and Technology

There are no greater proponents of education than people in greater Nebraska. The state’s education system is good and is one of the drawing cards for businesses interested in locating in the state. Nebraskans know that jobs today and in the future will require more knowledge of technology in all its forms. Whether people work in information technology in Omaha, farm near Cozad, ranch near Mullen, read x-rays in Ord, work on locomotives in Alliance or conduct research in one of dozens of locations in the state, they’ll have to know technology.

Technology requires consistent broadband access and capacity that statewide, Nebraska just doesn’t have. A conversation participant who lives outside North Platte told us her satellite gives her access to the Internet “as long as it isn’t cloudy.” That isn’t good enough for the needs of rural health care, business development, education or for attracting young people to smaller communities.

Infrastructure

If a state doesn’t have good infrastructure, it closes doors to economic development and therefore, growth. Infrastructure necessary for every viable community includes water, sewer, electricity, roads and Internet access. Additional infrastructure needs are schools, health care facilities, power plants, transportation and communication.

It’s expensive to build these things and expensive to maintain existing facilities. Dr. Doug Kristensen, Chancellor of the University of Nebraska-Kearney, told us many of the state’s school buildings were built about the same time – about 100 years ago – and are beginning to crumble, requiring extensive and costly repairs or replacement.

Changing Nebraska’s Layout?

The Strategic Discussions for Nebraska team interviewed a number of people who believe Nebraska should change its county structure.

Ninety-three counties were needed when people had to use a horse and buggy to get to the county seat, but some say the state could save money if the counties were merged, creating about 15 larger counties. Others say there would be few dollars in savings and would widen the gap between greater Nebraska and eastern Nebraska in accessibility to services.

Others suggest a “hub and spoke” regional layout, in which one town would be the hub and about 10 or 12 smaller communities would be the spokes. Trouble is, everybody wants to be the hub.

What makes the most sense? Send your opinion to me at sdn@unl.edu. We’ll post the results on the Strategic Discussions for Nebraska website: www.unl.edu/sdn.

Leadership and Cooperation

People told us the state and communities need strong leaders who are willing to partner with other organizations, communities, states and countries for the good of Nebraska as a whole. It also needs leaders who will consider the needs of the entire state, regardless of money, power or special interests.

In this magazine, you will find a variety of perspectives on Nebraska’s economy, including the opinions of state and community leaders, academics, business owners and government officials. Each opinion has value, based on the person’s experience, education, location and economic condition.
Interviews

Strategic Discussions for Nebraska interviewed selected local and state leaders, representing government, academia and business. Each was asked questions about economic drivers, community and state susceptibility, the state’s role in the global economy and vision for the future.
The department is doing everything it can to keep young people in Nebraska, but if they do leave, DED is trying to lure them back – one person at a time.

Richard Baier, Director of the Nebraska Department of Economic Development, said the state has to create an environment where young people and young families want to live. That’s one of the department’s primary long-term challenges. A state full of young people means they will have children here, creating the growth – and the future – the state needs.

“We are encouraging our communities to think like young families – what do young families want in a community? What does the community look like? Is it open to outsiders? How are the schools?” Baier said.

“We’ve done some research on people who have left the state and have come back. Most of them are looking for a good job, but they’re looking for other things – they’re looking for safety, security, family and for a close social network,” Baier said. Many communities have grown so large that people have lost those things – and Nebraska can provide them.

But the timing is critical, Baier said; the best time to lure young people back to Nebraska is when they are in their mid-20s, newly married with a child and a puppy (“they seem to come together”). If they wait to launch recruiting efforts until after families have two or three children who are in school, people are less eager to relocate.

“We need to be very aggressive about marketing to that age group,” he said. “They’re looking to get back to their roots. They don’t want to spend two or three hours of their day sitting in a traffic jam,” he said. “It cuts into the most important thing, and that’s family time.”

Baier is seeing progress.

“We’re going to see some really nice professional clubs forming across the state,” Baier said. They started in Lincoln and Omaha as social networking clubs for young people and that model is spreading across the state, allowing young professionals to move back to a rural community and still feel that they have a social network.

**Focus on Youth, Opportunities, Bringing Nebraska Together**

Whether it’s Facebook, MySpace, Twitter, LinkedIn or other social networking sites, the Nebraska Department of Economic Development is using them to stay in contact with the state’s young people.

“We need to be very aggressive about saying ‘come back home. Here’s employment opportunities, here’s a business you can buy, or here’s how we can support you if you want to become an entrepreneur’,” he said.

**Nebraska’s Global Economy**

The Nebraska Department of Economic Development hosted a reverse trade mission in September of 2008, 130 international business leaders representing five continents came to Nebraska for a week to learn what Nebraska has to offer in science, industry and agriculture. In the evenings, Baier said it was interesting to watch the social environment as everyone realized priorities are the same in all cultures – safety, security and family.

That kind of activity leads to cultural appreciation, which leads to business opportunities down the road, Baier said.

“We are developing a global culture because there is so much travel back and forth,” he said. Maybe a student from China goes to the movies here and develops an appreciation for popcorn, then goes home and imports it from Nebraska. Maybe it’s finding a sushi bar in Lincoln, Nebraska, he said.

**Helping Communities**

Baier said there are program representatives that go into communities to help them identify priorities and focus on long-range planning. Some community development groups are bringing in high school students into their board of directors and allowing young people who are looking for a career in a community.

Growing Nebraska and its communities means strong and consistent leadership, and it’s a marathon, not a 100-meter sprint. Part of the leadership training model is to bring in young people to identify community assets and leaders, then allow leaders time to attend leadership training.

If a community hires really good, young staff and compensates them well, those leaders can organize volunteers and activities and get everyone going in the right direction, Baier said. Many communities have tons of energy on the volunteer side, but a paid staff person can “cut the path for them,” he said.

In greater Nebraska, part of the department’s challenge is to have good, strong communities to sell. “It’s a bit of a competition,” he said. Nebraska competes with other attractive states, but also countries – like India.

“We have to know the labor force, buildings and building sites, websites. You go to a community website in most places in Nebraska and you’ll know real quick who understands,” he said.

Many communities have been proactive in staying in contact with alumni from local high schools, postcards, special websites and other methods facilitate communication.

“They’re very aggressive about saying ‘come back home. Here are employment opportunities, here’s a business you can buy, or here’s how we can support you if you want to become an entrepreneur’,” he said.

**Tourism**

Nebraska’s unique lifestyle and natural resources are unusual enough that they attract visitors not only from other states, but other countries, as well. Sparsely-populated agricultural counties are identifying and building on their strengths, Baier said.

People pay a fee to participate in cattle brandings in the Sandhills. Visitors to Valentine and Mullen are getting in big cattle tanks with friends and floating down the Niobrara or Dismal River (“tank”-ing businesses were booked for the summer by January, drawing people from the entire Midwest) – or they’re getting in canoes on the Calamus river, Baier said. The area around Burwell is capturing the area around the lake, where people now want to live full time. Mullen built the world-class Sandhills Golf Course, capitalizing on its natural terrain.

“What a unique asset – something that was written about as Buffalo Commons not that many years ago now has national recognition and people flying in,” Baier said.

The state’s hunting and fishing industry is able to sell a little different way of life, “some time to yourself,” he said.

“Selling” Nebraska is Everyone’s Responsibility

“I hate to say it, but I think we need to have a little more Texan in us and be more proud of the things we do have,” he said. “If you get on an elevator in Dallas and ask someone where they’re from, they get real excited, telling you they’re from Texas. We need to have that mentality here – we really do have some great things,” he added.

Bringing young people and young families back is up to all of us, Baier said. “Tell people…invite them to come back home.”

Agriculture: Nebraska’s Chief Economic Driver

Nebraska will continue to be a very strong agricultural state in the future, and communities will continue to support the industry of agriculture, according to Greg Ibach, Director of the Nebraska Department of Agriculture. Communities that embracing agriculture, especially those with thriving livestock industries, will be the most vibrant, he added.

“The livestock industry needs manpower and employees more so than the crop industry,” he said, and jobs drive the economy. “If you double the size of your row crop operation, you can probably get it done without hiring more employees. But if you double the size of your feedlot, you’re going to have to hire more employees,” he said.

The overall outlook for Nebraska agriculture is positive, Ibach said. Nebraska is the fourth largest agricultural economy in the United States and is second nationally in cattle production.

“Certain sectors can really forget the importance of agriculture in this state,” Ibach said, but he believes Omaha, among other communities, recognizes the importance of Nebraska agriculture.

“Look at the companies in Omaha,” Ibach said. “CnAgrA is an agricultural company; First National Bank of Omaha is one of the biggest agricultural lenders in the nation; Farmers National Company is also big. Many of these companies are deeply rooted in agriculture and they derive their success from the success and prosperity of the agricultural industry in Nebraska,” he said.

Anyone who employs people in agriculture realizes the importance of the work force and wants to make that work, Ibach said.

But there’s a clash when it comes to the work force and who’s going to do the hard work of growing, processing and shipping agricultural products, Ibach said. Immigrants have been supplying many of the agricultural labor force in Nebraska, but the attitude in some communities is that immigrants are taking jobs from Nebraskans. “People think they (the native-born Nebraskans) should have those jobs, but they don’t want to work hard enough to do them. But they don’t want others to come in and do the jobs, either. That’s the clash,” he said.

Future of Communities

“At the end of the day, agriculture is still going to be the most important employer in the state,” Ibach said. Small communities that embrace agriculture and look for ways to help agriculture grow and expand in those areas will be successful over time, he added, but each community needs to determine what its economic drivers are and develop the economic base the community can support into the future.

“We’ve had a lot of debate in Nebraska on whether it would be more exciting for young people to move back if we had a theatre, or a golf course, or other social amenities, but it’s more important to develop the economic base first and watch the social amenities follow,” he said.

Ibach and his family farm and raise cattle near Summer, Nebraska. “Summer is a few miles from Kearney, a few miles from Lexington,” he said. Summer is a community of about 250 people, and has a bank, a welding shop, a restaurant, a co-op, a post office, a grocery store and a school, among other businesses.

“I know of several examples of husbands who are working in livestock operations in our community, and their spouses are either starting businesses or working in other jobs in the community,” he said. For example, one woman is a teacher; another opened a beauty salon “and does a great business,” Ibach said.

Future Farmers

Ibach believes communities must take responsibility for much of the future success of the area. Smaller communities that are attracting young people back to the farm undoubtedly have strong National FFA Organization and 4-H organizations, he said. “These organizations have given young people the belief that they can be successful in agriculture and in smaller communities. “I think lots of times we’ve undervalued the need for strong FFA and 4-H programs in our communities,” he said.

When he attends a meeting of agricultural producers, he finds that there are many more younger agriculturalists. “Kids are seeing more opportunities in agriculture,” Ibach said, “and we’re seeing more and more parents encouraging their kids to come home and be a part of the farming operation.”

“That makes sense, he said. Many children of doctors and dentists become doctors and dentists; the same holds true of farmers.

Lifestyle and cost of living are also contributing factors pulling people back to a future in farming, he said. The relative safety of a smaller community compared to a large city is attractive to people, he said.

Farming and Higher Education

Young people who attend college are attracted to the many options an agricultural education can provide, Ibach said. “There is no college graduate today than an ag college graduate,” he said. “The work ethic, production training and scientific training combine to provide many opportunities in technical and professional careers.

Ibach is a graduate of the University of Nebraska-Lincoln himself, earning degrees in both animal science and agricultural economics. He believes strongly that the College of Agricultural Sciences and Natural Resources (CASNR) provided the education he needed not only to run a successful farming and ranching operation, but also the educational opportunities and qualifications to be Director of the Nebraska Department of Agriculture.

The University of Nebraska-Lincoln’s Institute of Agriculture and Natural Resources (IANR) includes many departments and colleges, including CASNR. The Institute of Agriculture and Natural Resources needs to remain strong and remains a very important part of the university system, Ibach said.

“The Institute of Agriculture and Natural Resources is a unique organizational and political piece in Nebraska, compared to other land grant universities across the nation,” Ibach said. “It is part of the fabric of agriculture in Nebraska. It recognizes that we’re the fourth largest agricultural economy in the nation, and the percentage of our economic vitality that relates back to agriculture,” he said.

Rural Infrastructure Vital for Nebraska’s Future

People don’t think about infrastructure till the bridge in their community falls down – then it becomes important. Even though Nebraska has spent a lot of money on infrastructure, it’s never enough, especially since the state’s infrastructure needs are expanding and are critical to the state’s growth. A few of the state’s infrastructure needs are roads, bridges, power, quality water, schools, health care...and high-speed Internet.

“You used to want the highway to go by your town. You still do, but if you don’t have access to high-speed Internet, it affects business interests in your community,” said Dr. Sandra Scofield, Director of the University of Nebraska Rural Initiative. “Dial-up just doesn’t do it anymore for most people. And if you want young people to look at your town and stay there, they can’t imagine living somewhere that doesn’t have Internet as fast and affordable as they have enjoyed at the university,” she said. “When you’ve been there, you aren’t going to go back.”

The University of Nebraska Rural Initiative was created in 2002 to extend the resources of the University of Nebraska and to address the challenges that face rural Nebraska, she said. The organization identifies all the knowledge, skills and creativity on all four of the university’s campuses and focuses all of that talent to address the challenges that face rural Nebraska, she said. The organization identifies all the knowledge, skills and creativity on all four of the university's campuses and focuses all of that talent on issues facing greater Nebraska.

“We support research, work in partnership with a variety of university organizations either to support things they’re doing or to gain their support for things we’re doing,” she said. One of the projects is to work with rural state senators interested in the future of rural Nebraska. One of the things they have identified is expanding access and affordability of high-speed Internet.

“T’m a big advocate of urging to get ahead of the whole communications technology explosion,” she said. “I think that has critical implications for what we might be able to do in terms of our future economy.” That means Nebraska has to have a well-educated population and it has to be appealing to young people. You have to have one to have the other, she said.

Scofield served in the Nebraska Legislature from 1983-1990 as a senator from northwest Nebraska; she still has a farm near Chadron. Through her work and education, she understands the needs of both rural and urban areas.

Nebraska’s economic drivers are agriculture, manufacturing, tourism, trucking, professional business services and information services, she said. Statistics list only drivers that bring revenue into the state, so that explains why education and health care aren’t listed, even though they are big players, she added.

The agr economy gives us a stable base,” she said. “People are going to have to eat, and Nebraska has a rich base of resources in terms of soil and water – and that’s not going away.” Even when the state experiences economic downturns, that stable base, combined with the state’s constitutional requirement of a balanced budget (“we’re not wild spenders in Nebraska”) buffers the state from the most severe effects.

Rural vs. Urban Incomes

However, some trends are emerging that concern Scofield. Nebraska statistics show that Nebraska is one of the top five states in the country in which people have two or three jobs. Nebraska has more women in the workforce than any other state. “We may have more people at a subsistence level than we would like to think,” she said.

Some of the people in the statistics show up as entrepreneurs, but they’re not. “It simply means that a person may have had a job with a company that said ‘you don’t have this job anymore, but we’ll contract with you.’” Scofield explained. That means you won’t make as much money and you probably won’t have benefits, she added.

In terms of wealth people have at their disposal, Nebraskans are getting poorer in some areas of the state. Some of the statistics can read differently depending on when and where the numbers were collected. In an ag state, prices fluctuate, so if the numbers are collected when cattle prices are bad, “you’re going to look poor,” she said, “but if you look at the incomes in rural Nebraska, they are considerably below Omaha.”

Certain counties always show up in statistics, she said, Thurston County, with its two Indian reservations, always comes up in poverty statistics. Some statistics show that Nebraska has three of the poorest counties in the United States. Although Omaha has an expanded information technology industry and Fortune 500 companies, attracts many educated workers from greater Nebraska and from other states. Although Omaha generates the majority of the sales and income tax revenue for the state, communities in the state are interdependent. If greater Nebraska is successful, Omaha is successful...and vice versa.

Expectations of State Government

Scofield served two terms in the Nebraska unicameral, serving on committees including appropriations, agriculture, education and children and families.

The role of state government is first, to maintain civic order, but also to provide for those who are unable to provide for themselves. Beyond that, Scofield would like to see state government vision and leadership for the future, allocating resources in a responsible way so the state can achieve a healthy future.

“Most people who go to the unicameral have that same set of desires,” she said. But while senators are solving the short-term crises, they aren’t doing other things that are also important to the state’s future.

Preventing future problems takes a lot of senators’ time, she added, but “nobody ever writes headlines about somebody who prevented something, because not everybody’s sure that’s going to happen. Now if the fire’s burning and you put it out, then you make headlines. If you’re smart enough to prevent it, you don’t get any mention at all,” she said.

Taking Care of the State’s Resources

One of the state’s tasks is to take care of its resources. “We’re really lucky to have the base of resources we have,” she said. “Soil, lots of water, relatively few environmental problems, a food-producing capability that is the envy of many places, natural resources valuable not only for their agricultural potential but also for their recreational potential and for the ‘refreshing your soul’ potential,” Scofield said.

The state’s resources also include its human resources. Nebraskans are inventive, she said. Many times, the most creative inventions don’t come from universities, but from someone trying to make his business better, she said.

“We ought to encourage that kind of innovation and help people start new businesses,” she said. “If anybody is going to come up with a new gadget that solves energy issues, I’d put my money on some farmer who’s trying to cut his costs.”

- Dr. Sandra Scofield, Director of the University of Nebraska Rural Initiative

Nobody ever writes headlines about somebody who prevented something, because not everybody’s sure that’s going to happen. Now if the fire’s burning and you put it out, then you make headlines. If you’re smart enough to prevent it, you don’t get any mention at all.
Nebraska’s Future Bright with Bold, Frugal Leadership

Nebraska’s economic future can be positive, but it hinges on frugal, yet bold leadership on both the state and local levels, according to State Senator Bill Avery of Lincoln’s District 28. And that means putting investments in the right places.

Avery, a Professor of Political Science at the University of Nebraska-Lincoln for more than 30 years, retired when he was elected to Nebraska’s unicameral in 2006. So Avery will have to overcome some obstacles to achieve that bright future, he said. Nebraska is known for having high property taxes because of its small tax base; the state has a declining work force, which is thought to be one of the state’s most pressing problems; the smallest communities are struggling to survive; and demographic changes will continue to impact communities of all sizes.

On the other hand, Nebraska has many good things happening. “The economic future for this state will continue to be pretty good as long as the agricultural economy stays strong,” he said. There are many spinoff industries that have developed from agriculture and are competing in the global economy. “And if we get to where I think we will with cellulose ethanol production, some of the pressure centers can be relieved, and that will be good in the future, too,” he said.

Avery believes Omaha and Lincoln will both be strong in the future – Omaha with its wealth, its information technology infrastructure and Offutt Air Force base, where United States Strategic Command has its headquarters; Lincoln with the flagship campus of the University of Nebraska and its planned Innovation Campus, the city’s proposed arena and the Antelope Valley project.

Lincoln “In many ways, Lincoln is poised for a tremendous economic takeoff,” he said.

The arena in the west Haymarket district would attract a certain demographic, as will the University of Nebraska-Lincoln’s research campus. Nebraska’s unicameral voted in the spring of 2008 to move the State Fair to Grand Island in 2010 so the research campus can be built on the fair’s current site.

Innovation Campus

“I think the research campus at the university is going to be a tremendous engine for new growth and an incubator for new knowledge,” he said. It will also attract a large number of well-educated people to lucrative jobs, which will impact every segment of the economy. Although there was controversy about moving the Nebraska State Fair to accommodate the research campus, Avery said the state senators representing Lincoln got together and agreed that the research campus was the group’s number one priority, even though they hoped the fair could remain at its current site.

There are interesting research studies on how communities attract and keep young workers, he said. “Things like tolerance toward diversity, especially tolerance toward sexual preference, diversity, not just ethnic diversity,” he said. Additionally, the availability of museums, art galleries and other forms of entertainment – more than just movies and sporting events – are attractive to young workers.

Arena

“The proposed arena will appeal to some people, but not necessarily to people who are thinkers and who deal with new knowledge – concept workers. That’s not to say they can’t be football fans or basketball fans; it’s just that they’re more likely to go to the art gallery or to the Lied Center (for Performing Arts),” Avery explained.

Avery sponsored LB 912, which was passed by the unicameral in early 2008. The bill is expected to provide about $700,000 per year in state sales tax revenues for the proposed arena project. The arena would be built just west of downtown Lincoln, and would replace the city’s existing Pershing Auditorium.

Lincoln

Pershing was built in 1956 and has a capacity of 7,506; the proposed arena would seat approximately twice that number and would include the new technology and infrastructure that many events require.

Antelope Valley Project

The Antelope Valley project combines flood control, transportation and community revitalization for Lincoln’s historical core, and is a partnership between the Lower Platte South Natural Resources District, the City of Lincoln and the University of Nebraska. Lincoln “has taken some risk, and that’s huge, and expensive,” Avery said. “It’s not just flood control – it’s urban re-development. And it’s going to be tremendous,” he said.

Besides preventing floods by carrying heavy rain runoff to Salt Creek, the project is changing the landscape of some of Lincoln’s oldest neighborhoods and developing new roadways, parks, bike trails and shopping and entertainment venues.

Nebraska

Nebraska has to be smart in planning for its future, and that may involve a collaboration of people from many perspectives.

Nebraska’s legislature has already passed legislation to recruit and retain businesses to Nebraska, and is crafting additional bills to work with economic development issues.

However, one of Nebraska’s largest issues is the declining work force, particularly skilled workers, Avery said. “It doesn’t matter what you do with the Super Advantage Act or the Nebraska Advantage Act – tax breaks, whatever – if you don’t have the workers, they’re not going to build that plant, and that’s one of our problems,” he said.

He has to try to do a bill to get a scholarship fund set up to train students in Nebraska in areas of high need. The bill would provide students scholarships in needed careers; the recipients would return to Nebraska communities to work for a period of years as payback for the scholarship; the state keeps people here, it helps us to build,” Avery said.

Taxes

“There’s a lot of misinformation (about taxes) because we have groups that cherry-pick their information and like to put Nebraska in the worst possible light,” he said.

In comparison with the rest of the country, “we’re not particularly high in state income taxes; we’re about in the middle on sales taxes. Where we’re high is on property taxes,” Avery said.

Nebraska’s higher property taxes are because Nebraska’s small population doesn’t provide a broad tax base. Much of the property tax is determined by local governments and jurisdictions, counties and cities. The state can give rebates, which it has done, and could enact other measures, but in the end, it’s really a local issue, he said.

Comparing the tax structure of Nebraska with tax structures of other states can be misleading, he said. For example, Wyoming has a small population and low taxes, but it imposes a severance tax on extractors of natural resources if the resources are to be consumed in other states, such as petroleum, coal and natural gas. Nebraska does not have those resources, so is unable to access that revenue. “This makes it possible for (Wyoming) to pay their teachers more than we pay ours without having to hit the taxpayers very hard,” he said.

Avery is pursuing tax relief for residential homeowners; he is especially concerned about the impact of property taxes on people with fixed incomes, especially considering the uncertain economy.

Military Economy

The military economy in Nebraska amounts to $2.5 billion, Avery said. Nebraska has 27 military facilities, which surprises many; he added. Offutt Air Force Base, headquarters of U.S. Strategic Command, accounts for $2.2 billion of that total; the National Guard facilities throughout the state account for the other $300 million, Avery said.

The state senators pay close attention to those facilities to be sure they adhere to federal regulations; if they don’t, there’s a chance the government will close a facility, taking a segment of Nebraska’s economy with it.

Rural vs. Urban

Nebraska’s small towns struggle to survive, but small towns continue to matter to the people who live there – even though they may not make a significant impact on the state’s economy.

“If you start closing down factories like the one in DeWitt, where the inventor of the Vise-Grip” built his first shop – that really matters to the people in De Witt, but does it matter to the rest of the country, to the rest of the state? In the long run, it probably does not have a huge impact,” Avery said.

On the other hand, Omaha is going to be the economic driver. “Nebraska will get some of that action, but probably not as much, because Omaha has an infrastructure – particularly an IT infrastructure – that is very impressive and is integrated with StratCon, which is also a big asset,” he said. “And they have money. Omaha is a wealthy city, and they have people who are willing to invest their money in public projects. And Lincoln can’t compete with that.”

Avery said Nebraska’s future is going to be more and more people wanting to live in Lincoln and Omaha, and it will be a struggle just to keep those communities around.

However, as long as there are meating plants in small communities, those places will be fine. But if you take away the main employers, he said, there’s nothing left.

Agriculture, Incentives, Education Vital to Nebraska’s Future

Nebraska Governor Dave Heineman’s long-range goal is to provide the state’s children a 21st-century, knowledge-based, technology-driven, free-market economy approach to education to be sure they are prepared for the economy in which they’ll compete. And he wants to create opportunities in the state so they’ll want to stay.

Educating children for the jobs of the future, combined with a package of economic development incentives called Nebraska Advantage, are already showing results, Governor Heineman said. Since Nebraska Advantage was created, Nebraska has seen more job creation, including some big names.

“Last year we recruited Yahoo! to our state – a high-technology company from California,” he said. “One of the reasons we were able to do that is because of our work force, the great attitude of our people in this state. If you have the right incentives, the great work force, low energy costs, keep lowering taxes, control your spending but invest in an education and economic development, you can make a difference,” he said.

Yahoo!, an Internet search engine based in California, announced in October that they would locate a data center in La Vista and a customer care center in west Omaha in 2009. Although Omaha and Lincoln may grow more quickly than other communities, it is important to create growth opportunities in every part of Nebraska. Making growth happen is a teamwork concept between the state and each community, he said.

“Our job is to create the opportunity, then it’s the job of the community to take advantage of that,” he said. Growth in communities depends on business leadership that wants to make a difference, it takes a community that has the right attitude – “we can get it done” attitude. You have to take advantage of economic incentives, have the right leadership and have to promote your community,” he said. “If you believe in your community, you can make a difference.”

Even though the big draws like Yahoo! make the headlines, agriculture and all the associated industry continues to be the foundation of the state’s economy, he said. “We need agriculture to grow. Agriculture is still the number one industry in this state, so farming and ranching are part of this, too,” he added.

“Agriculture is probably the most rapidly-changing industry that I know,” he said. “They’ve been competing in this free-market global economy for years, and they’re more efficient than ever before.” The group connected to farming and ranching, he said, but also to agribusiness, research and development, the ethanol industry and other technological developments in the ag industry continue to grow.

The governor leads agricultural trade missions to countries in many parts of the world, arranging sales of Nebraska’s products. “We can make a difference as a state when we go on the trip to Germany, to China, Japan, Cuba, Taiwan,” he said. Nebraska can make that difference by making contacts, supplying support and building a level of trust so companies in other countries know they are dealing with reputable Nebraska companies.

Omaha, a Regional Center for Economic Development

According to Jerry Deichert, Director of the Center for Public Affairs Research at the University of Nebraska-Omaha, the result is now evidenced by declining populations in rural Nebraska and growing populations in Lincoln and Omaha.

The Center for Public Affairs Research exists for three main reasons. First, it is an independent source of information. Second, the Center helps interpret census data and makes it available. Third, the Center does survey research, every four years, it does an Omaha Condition Survey, gauging public opinion on topics of importance in the Omaha area.

Rural, Urban Population Shifts

In rural Nebraska, “what we are seeing is young adults leaving after high school. Some come back, but most don’t and as a result, you have that aging population and fewer kids,” Deichert said.

More than half the state’s population is concentrated in just three metropolitan counties – Douglas, Sarpy and Lancaster.

That doesn’t mean that all small towns are declining, but in the aggregate, that’s the case,” he said. However, “there are many areas where the agriculture is going on around the state, too.”

The smaller the town, the less likely it is to grow in population, he said. Smaller towns may still exist, but their functions are changing. People may live in one town, but work in a larger community.

In the 1980s, Deichert said, Nebraska was really exporting people - more than 100,000 out of the total population of 1.6 million. However, the state actually added population because births exceeded deaths during that time. In the 90s, the state had a net in-migration because of people moving into the state.

“A lot of the people that we were gaining people from other states, too,” he said. In the 2000s, he sees that domestic out-migration by people going out of the state. “We have been and now we are gaining people from other states, but we’re gaining folks from other countries,” he said.

The net out-migration is about a thousand, or 1,500 a year, but it’s a shift from town to town,” he said.

Deichert said people want to know how undocumented folks impact the state’s economy, but it is difficult, if not impossible, to determine that figure. However, based on cost vs. benefit research conducted as part of an immigration study by Dr. Christopher Decker, Associate Professor of Economics at the University of Nebraska-Omaha, it was determined that the native born and foreign born cost to society about the same.

Deichert said. That conclusion is based on an input-output economic model using information taken from the U.S. Census.

Omaha as an Economic Driver

Omaha is often thought to be a chief economic driver in the state, partly because of its large population relative to the rest of the state. Much of the activity in Omaha is associated with agricultural activity throughout the rest of the state, Deichert said.

“Have the Farm Credit Association; you have ConAgra, you have other kinds of food processing headquarters; there are packing plants; you have the financial sector that services that industry; you have manufacturing that services that industry; and you have transportation, with the railroad, that serves that industry, so it’s not divorced from the agricultural sector,” he said.

Income, Differences, Poverty

Compared to the U.S. as a whole, people in Nebraska’s metropolitan counties have incomes about 10 percent higher than the average, while the rest of the state is about 15 percent lower than the national average. “The more rural the county, the more likely it is to be below the national average,” he said.

Even though Nebraska has a slightly lower poverty level than the nation as a whole, some of the more rural areas have higher poverty rates. In fact, Loup County in the northeast has the lowest per capita income of more than 3,000 counties in the United States, Deichert said. Another county with a high poverty rate is Thurston County, home to two Indian reservations.

Population Projections

Deichert said the Center for Public Affairs Research’s population projections show that 10 years from now, the state’s population will increase by four to six percent.

“We had the baby boomers, then the kids of the baby boomers; now we have the grandkids of the baby boomers … and that ripple effect… that’s going to slow down,” he said. Immigration from other countries is also slowing down; births will slow down and after high school, some groups of students leave the state. But in 15 or 20 years, there will really be an increase in the 65-and-older population, he said.

Deichert said the bulk of the baby boomers are now before age 65. “Less than a quarter of the state’s population will be over 65 by 2020,” he said. “Some people don’t understand that there are significant numbers of baby boomers that are going to be turning 65 during the next 15 years.”

Deichert said the Center for Public Affairs Research’s population projections show that 10 years from now, the state’s population will increase by four to six percent.

“Something will have to change… types of services, people won’t be able to retire at 65, people will have to work longer… all types of occupations,” Deichert said. “It’s not just you, it’s a sample of people who don’t retire, ‘they may do things differently, but they’re still working,’” he said. For more information visit www.unl.edu/sdn/economy
New Senator, Solid Vision

Nebraska’s economic priorities need to be education, agriculture, transportation and technology, and there’s not much time to waste.

“We either plan for how we’re going to be a part of the global economy, or we lose big time,” said Senator Kathy Campbell of Lincoln. And the state has to get over the concept of who’s winning and who’s losing – and work together for the good of the whole state.

Kathy Campbell was elected in November, 2008 to represent the 25th District in Nebraska’s unicameral, replacing Senator Ron Raikes. Raikes had served eight years and because of term limits, could not run again. Campbell brings more than 30 years of experience in business, government and human services to the legislature.

She is Executive Vice President of CEDARS Home for Children Foundation, served 16 years on the Lancaster County Board of Commissioners and has been involved in the family business – Campbell’s Nursery and Garden Center. Educated as a teacher, she earned both bachelor’s and master’s degrees from the University of Nebraska Lincoln.

Economic Engines

Campbell believes Nebraska’s chief economic engines are education, agriculture, transportation and technology – not necessarily in that order – but Nebraskans need to learn how each impacts the state’s economy.

Education

“The University of Nebraska is an economic engine for the state,” she said. “We have many higher education opportunities, but one major university – and we need to maximize the use of it. They’re willing to get involved, and that’s an asset.”

The University of Nebraska will play a big role in the global economic effort, she said, and part of that will be Innovation Campus, a research park to be built in Lincoln on the site of the Nebraska State Fair. “I maintain that Innovation Campus will have a greater benefit to greater Nebraska than it will to Omaha and Lincoln,” she said, because it has the potential to create a network with every part of the state.

Agriculture

“We’re lucky that we have agriculture; we have a healthy cash reserve here because of agriculture,” Campbell said. In Nebraska, one job in every three or four is connected to agriculture, so it will always have a major role in Nebraska’s future, she added.

“We need to see how we can tie ancillary services to the strength we already have in agriculture,” she said. “We need to build on what we have.” Nebraska has a small population, but there’s strength in that and in knowing what businesses can work best with others.

The state has the land mass to support agriculture, and with the continued work of the University of Nebraska researchers, agricultural products can not only feed the world, but they can be the energy of tomorrow through corn, switchgrass and other commodities that can be converted into fuel. “We need that shot in the arm for agriculture,” she said. “We need to be sure they’re on the cutting edge so they’re economically viable.”

Wind Energy

“The energy of tomorrow can also include wind energy.” It has caught people’s attention,” Campbell said, but the cost of wind energy is not installing the equipment – it’s in the cost of transmission lines. Wind energy has great potential, she said, it’s a good use of the land. “And if we could draw down the federal dollars to transmit it, we’d be in great shape. But boy, that’s a huge capital investment.”

Many people don’t understand how energy is transmitted in the United States, she said, or why an ice storm in greater Nebraska is reflected on energy bills in eastern Nebraska. And it’s important for the public to learn about issues that affect the state so Nebraskans can grow and so citizens can cast informed votes.

Transportation

Campbell learned about the importance of transportation to Nebraska’s economy when she served on a transportation task force for then-Governor Mike Johanns. She traveled the state, attending public hearings and listening to people in full auditoriums. “Roads are being built in this state with very little view to how it plays into the economic health of the communities,” she said. “We ought to be able to figure that in.”

When Campbell served on the Lancaster County Board, she heard from people who wanted to have county roads paved. There is a certain formula, she said, for determining paving priorities – if more than about 450 vehicles use the road in a day, then the asphalting project is possible.

“We need to be sure they’re on the cutting edge so they’re economically viable.”

When I traveled the state, what became so clear was that numbers don’t count,” she said. “You have to create those links with other states in order to create economic potential. If you don’t have adequate roads, you don’t have adequate economic opportunities. And in many areas, they don’t reach 450 vehicles per day – but they still need to have paved roads.

Campbell’s 25th district has the issue of the south and east beltways, which may eventually be part of Lincoln’s transportation network. The south beltway would connect U.S. Highway 77 with Nebraska Highway 2, while the east beltway would connect Nebraska Highway 2 with Interstate 80. One of the considerations, she said, is “how to grow a community the size of Lincoln and still protect the integrity of small communities?” Unlike Douglas County, Lancaster County has more small communities to protect, but transportation connectivity with Omaha is increasingly important.

One of Nebraska’s strengths is in its location in the center of the United States, she said. In fact, she believes Nebraska could be an air and rail transportation hub. “It’s not outside the realm of possibility,” she said.

Technology

Technology is affecting every area of the state - from broadband capacity and access to converting commodities to fuel. Internet connectivity allows people to live in smaller communities and still conduct business globally.

“What a lot of potential here – to bring a network to areas all across the state. We can create a network and a link to every region,” she said.

Working Together

“If you’re going to maximize your efforts in a small population state, you’re going to have to rely on the networks you create,” Campbell said. But those networks don’t just happen; they need to be structured and purposeful.

Representatives from these groups should consider meeting annually to have purposeful conversations about moving the state forward economically.

“When you see things happening, you see the ripple effect,” she said. “I’d see Lincoln and Omaha collaborating regionally. And that’s why, as a senator from the Lincoln area, you really want to see both communities prosper and grow economically,” she said.

The Human Services Aspect

Campbell helped start the Nebraska Committee for the Prevention of Child Abuse and has always been involved with issues involving children, including a seat on the Medicaid Reform Council. She serves on the Health and Human Services Committee in the unicameral, as well as the Transportation and Telecommunications Committee.

“Unless we have a very solid economic development focus in that state so much of what I advocate for children and families can’t happen unless they have a good job and a way to care for themselves,” she said.

Lincoln Mayor Chris Beutler believes Lincoln will be on the west end of a great metropolitan community in the future, and it is important to begin preparing both Lincoln and Omaha for that eventuality.

“I think it is important that we start thinking about each other in that way, rather than in the competitive way that we have thought of our respective communities in the past,” Beutler said. Lincoln and Omaha both need a lot of preparation for that pathway, he said.

The two cities have started some joint projects already, including the formation of the I-80 Commission to begin thinking about the link between Omaha and Lincoln. The commission will consider issues such as zoning, planning and transportation.

Transportation between Lincoln and Omaha has long been a topic of discussion. Both cities have airports, and Beutler does not believe a shared airport is in the cities’ future. However, Interstate 80 between Lincoln and Omaha is in the midst of a multi-year project which expands the system from two lanes to three, accommodating increased traffic. In the future, Beutler would like to see a light rail system built to connect the two cities.

Lincoln’s identity is as a university town, Beutler said, and the city will continue to develop and capitalize on that identity. “Our destiny is tied to some extent to the university and to the research the university is engaged in,” Beutler said. The research and the associated business and industry are probably the most likely pathways to further economic growth and vitality for Lincoln to achieve what it needs to do in the future, he said.

The University of Nebraska-Lincoln’s Innovation Campus will be built on the site of the Nebraska State Fair when the fair moves to Grand Island in 2010. Research funding at UNL has more than tripled in just over 10 years, and Innovation Campus will provide additional facilities for research and will attract educated workers to the area.

The University of Nebraska system has four campuses: the University of Nebraska-Lincoln, the University of Nebraska-Omaha, the University of Nebraska Medical Center, and the University of Nebraska at Kearney. The last two are located in Omaha. Beutler believes there are many opportunities for cooperation. “There’s overlapping research between the Medical Center and the sciences over here [at UNL],” he said, “there are a lot of possibilities for collaboration in that way.”

The space law program in the University of Nebraska-Lincoln’s College of Law, for example, could be a collaborator with StratCom, which is housed at Offutt Air Force Base near Omaha.

Lincoln, Omaha and the bedroom communities surrounding those cities comprise approximately two-thirds of Nebraska’s population. The rest of the state’s communities are tied to agriculture, agricultural processing or to transportation corridors, as agriculture continues to be the main business for Nebraska, Beutler said.

Nebraska ranks near the top of the country in cattle production and processing, and greater Nebraska provides the workforce and the systems to support that industry, as well as the other agricultural industries in the state. Nebraska’s agricultural industries have expanded to other uses, including energy.

“Ethanol and alternative energy production may stabilize the area,” Beutler said, and wind energy may also be a contributor to stabilization.

Transportation corridors are going to become more important, he said, as time passes, “I look for those areas to stabilize, but I’m not sure that means growth. It may simply mean the end of the drain on (rural Nebraska).”

But that drain ends, it will put more pressure on Lincoln and Omaha because those cities’ workers come from the rural areas. “So that should cause us to think about the need for immigrants and how that fits into our outlook on policy. I’m not sure people generally see immigrants as needed right now — but they are,” he said.

At this time, Nebraska doesn’t produce enough good jobs to keep people here, but the mayor’s office is working on private sector growth and public-private partnerships that will create good jobs and new jobs.

A proposed 15,000-seat arena is one of the projects the mayor hopes will be built in the future, though a vote to approve the arena has been delayed due to the current economic climate. The arena would be built west of downtown, in Lincoln’s west Haymarket district, and would accommodate sporting and entertainment events. But the arena would serve additional purposes, including economic development.

“First of all, it will mitigate the bludgeoning that’s occurring right now with regard to the loss of statewide tournaments of one sort or another that are starting to go to Omaha or other places,” Beutler said. “I think people like to come to Lincoln from the rural areas, generally speaking, and I think we will continue to come if we get a new arena. That income is significant to Lincoln,” he added.

Growth and economic development are cooperative ventures, and Beutler believes athletic teams that continue to improve will attract more and more spectators, thus bringing more dollars into the city’s economy.

Additionally, he said, “I think the arena is a kind of thing that makes life interesting here and what makes people happy to be here, live here, and raise their families here. So the arena’s important from our perspective.”

Leadership, Cooperation, Key to Nebraska’s Future

Education, positive leadership and cooperation are three keys to Nebraska’s future economic success. And if a community is waiting for a silver bullet to provide a bright future…well, there aren’t enough silver bullets to go around. But for communities with the right attitude, there’s a bright future ahead.

Peter Kotsiopulos, Vice President for University Affairs in the University of Nebraska system, brings a wealth of experience in private business and community government to his NU position, where he’s been since 2005. A former mayor of Kearney and three-term member of the Kearney City Council, Kotsiopulos is a proponent of forging partnerships; he believes Nebraska needs partnerships to build on its strengths and solidify its future.

Retention, Attraction and Growth

There are probably 12 definitions for economic development, but I look at it as retention, attraction and growth,” he said. And he believes it’s the responsibility of higher education to lead the way when that topic arises.

Nebraska’s economic future – especially in greater Nebraska – means that smaller communities may benefit by working together in any way possible to ensure communities’ survival.

“We have 352 communities in the state, and more than 400 have less than 1,000 people. A little more than 400 are less than 2,500, so that leaves less than 50 communities with greater than 2,500 people,” Kotsiopulos said. Lincoln has nearly 250,000 people, and Omaha nearly 500,000.

Even with their large populations relative to other communities in Nebraska, Lincoln and Omaha also must work toward keeping jobs in Nebraska. “I see them talking to their larger employers, saying ‘before you think of a satellite out of this state’ – or piece of your business go to another community in this state? And as that mentality happens, that will be one of our communities’ salvations,” he said. While communities still must recruit new companies, supporting and growing existing businesses within the state often pays more dividends, he said.

The future of Nebraska communities of all sizes depends on leadership and cooperation, and on involving young people in decisions that will affect their future, Kotsiopulos said.

“Communities, city councils and the mayor, the team, or U-NET, was formed to provide networking opportunities within the NU system. Partnerships

Developing partnerships is important in communities; between and within the private and public sectors; in government; and in higher education. Kotsiopulos is working on partnerships that facilitate networking in Nebraska’s higher education community. The University of Nebraska Entrepreneurship Program team, or U-NEPT, was formed to provide networking opportunities within the NU system.

“We’re drawing from each other’s strengths,” he said. “We don’t want to make everything cookie-cutter, but we’re trying to do more of the things that bring our talents together.” U-NEPT includes people from the four NU campuses and is being expanded to include representatives from other Nebraska colleges and organizations. “This is an opportunity to share and play off each other’s strengths,” he said. The network of resources – especially those in greater Nebraska, “is so vast,” he said.

Equalizing Earning Potential = Billion-Dollar State Impact

For more information visit www.unl.edu/sdn/economy

The 2009-2010 academic year will be Avenue Scholars’ first year of the program in schools chosen as the program’s pilot schools – Ralston, Omaha Benson and Omaha Northwest. And until recently, so have the kids. How Avenue Scholars Works

Chris Fishback Giovanni Jones Dr. Ken Bird Dr. Jef Johnston Wayne Brown

“The model is going to be introduced to their talent advisors and to the rest of the student cohort.”

“The model is going to have us in virtually daily contact with the young people we serve,” Fishback said. “I will be teaching a college access and success course in our first three pilot schools,” he said. If there are barriers to student success, Fishback and the talent advisors in the high schools will know right away and will be there to help push aside the barriers. Through the program, students will have access to tutoring, programs and activities, will be able to take college credit courses and will be coached through the process of preparing applications for college. Although the program won’t give students money for college, advisors will help them find scholarships and complete the applications. At the end of the students’ senior year, Fishback and other high school talent advisors will pass them along to Jones and other post-secondary talent advisors, who will help them adjust to college life. “As one of the post-secondary talent advisors, what I do is help to eliminate barriers, excuses and reasons,” Jones said. If students don’t feel comfortable in the college campus atmosphere, Jones and the other post-secondary advisors will spend the summer helping them become connected. “We’ll show you everything from the cafeteria, to what it’s like to take college courses, to moving into the dorm,” she said. Post-secondary talent advisors will keep track of students on campus...listening, offering advice, answering questions...maybe even offering a home-cooked meal. “What we’re going to do is take some of that shame out of it, the shame of not knowing, and just empower students with information and resources,” Jones said. She calls it self-advocacy. Jones also grew up in north Omaha, and is thankful that her mother wanted the best for her and signed her up for every after school program she could find. Her mother didn’t have the experience, but she taught her daughter to overcome the embarrassment of not knowing...which Jones hopes to pass on to other students.

“There are about 22,000 juniors and seniors in Douglas and Sarpy counties; those counties are the focus of Bright Futures right now. About 35 percent of those students, Bird said, are eligible for free and reduced lunch in the public school system, which parallels eligibility for tuition assistance. That means there are 7,000 students from whom to choose as Avenue Scholars. ‘We’re going to break some hearts,’ Bird admitted. Johnston added that when you hire people like Brown, Jones and Fishback, their hearts go out to every kid. ‘It’s going to be hard,’ he said.

Students will be selected for the program in part through a relationship-based referral process, Bird said. In addition to the schools, organizations like the Urban League, the Boys and Girls Club and others will help refer students to the Bright Futures Foundation’s Avenue Scholars program. Students who are not selected, he said, may be referred to other programs. Additionally, the students selected as Avenue Scholars are first-generation college students, have financial need, demonstrate limited high school success and have a resiliency that will help them overcome barriers. Gallup, Inc. provides assistance in selecting resilient students.

The Bright Futures Avenue Scholars program is unique because it offers the intrusive support, the safety-net approach throughout the student’s college career. Similar programs nationwide help students get into college, but don’t offer the often-needed support during college.

‘We’re there to help you every step of the way,’ Jones said, whether it’s financial, family, social, emotional or other issues that could impede success. ‘But we worry about those things. Students concentrate on getting the work done, and we’ll take care of the rest,’ she added.

Collaboration with the University of Nebraska–Lincoln

'Tina Creighton, a faculty member in the University of Nebraska-Lincoln College of Journalism and Mass Communications (COJMC), produced a 30-minute documentary in 2008 called The Academic Achievement Gap: You Do Better When You Know Better, about the achievement gap between black children and white children in Omaha. Creighton’s documentary, produced as part of her master’s thesis, has helped to publicize the issue. Creighton, who begins work on her Ph.D. this fall, has been asked to work as a consultant with Bright Futures Foundation and will complete research projects for them. The COJMC collaborates with Bright Futures Foundation’s Avenue Scholars program to support the project’s students.}
**Nebraska Center for Entrepreneurship: “Innovation is the quickest way out of a recession”**

In the midst of a down economic time, “it’s hard to see what’s going to change or what’s going to lead us out of it, but in five years, I think we’ll look back and be surprised at what led us out of the recession—out of necessity,” according to Kathleen Thornton, Acting Director of the Nebraska Center for Entrepreneurship at the University of Nebraska-Lincoln.

Innovation is the quickest way out of a recession, as businesses fall by the wayside, people will step in and do it better and faster, she said. Even though it’s difficult to think of innovations when you don’t have the resources, she said she hasn’t seen a great idea yet that people aren’t thinking of.

The Nebraska Center for Entrepreneurship focuses on teaching students how to start and operate businesses through education and entrepreneurship competitions. Thornton said, “so the education in entrepreneurship goes global quickly.”

But most of the students in Thornton’s entrepreneurship classes are not looking at the state, though most plan to work for someone else before they start businesses. “That’s actually okay,” she said; “they can learn the process, work for somebody for five years, have the contacts and the expertise so they’re ready when they want to do this on their own.”

Nebraska has potential for people who want to start businesses, she said. “It’s a big state, so they have the space to do the things they want to do.”

An inadequate number of educated workers is one of the biggest challenges the state faces, and one that will involve slowing out-migration, or “brain drain” of educated young professionals, Larson said. And when university students get involved with those firms, they are more likely to stay in Nebraska rather than look elsewhere for a good job.

Community Conversations

Strategic Discussions for Nebraska hosted a community conversation in five Nebraska communities, as well as a focus group at the University of Nebraska-Lincoln. The conversations took place in January and February of 2009. Participants were asked questions about their views on the economy of the state and of the nation.
The largest town in the Loup River Valley region, Ord is home to 2,200 people and is the county seat of Valley County. Its economy is rooted in agriculture and driven by its farmers and ranchers. However, farms are larger, so fewer people are farming. That means fewer people supporting small towns, even though agriculture is still a vitally important economic driver in this Sandhills region.

“The ag side will give us the potential to be global. We will always be there to supply the world with food,” said Ord Mayor Randy O’Brien. The ag economy supports much of rural Nebraska, but much of the income for Lincoln and Omaha comes from rural Nebraska, he said. In spite of the importance of agriculture, Ord is looking for new ways to diversify its economy. It is identifying assets, dealing with challenges and creating a community known statewide for its vitality.

“One of our biggest resources is your young people,” O’Brien said. Ord looks to the town’s young people for new ideas and involves them in community leadership. In addition to formal leadership training, the community’s older leaders mentor younger ones. That’s the way to ensure a community has strong leadership generation after generation, said Caleb Pollard, who took the job of Executive Director of the Ord Chamber of Commerce in late fall, 2008.

“This community has taken itself up by its own bootstraps and has said ‘we’re going to do this ourselves,’” Pollard said. The community is capitalizing on its strengths, recruiting businesses to Ord, teaching young people to be entrepreneurs and staying on top of the issues that affect rural Nebraska.

“A successful community is not one that looks to the state and says ‘what are you going to give me’. Successful cities are ones like ours – ones that look after themselves. We have a vision and a plan to improve our community ourselves, not because somebody did it for us,” said Nancy Glaubke, also of the Ord Chamber of Commerce.

Managing Change, Leadership
Successful communities have strong, positive leaders who are knowledgeable about issues, accept change and aren’t afraid to learn from and cooperate with others.

“It takes people who push hard, who may not be the most popular in the end, who can get things done,” according to Max Kroger, Superintendent of the Ord Public Schools. When Kroger came to Ord 11 years ago, people in Ord liked the way things were – until storefronts started emptying. “The town decidedmaybe we can’t do that anymore,” he said. Then economic development came in and started bringing in new businesses. “If you don’t go ahead, you go backward,” Kroger added.

But change isn’t always easy, especially when a place has been the same for a long time. Change requires that people step outside the familiar, and that can be uncomfortable.

“You have to build a narrative on why change is important,” Pollard said. “Change is going to happen whether you want it or not, it’s how you guide that change for better or worse.”

The Importance of Attitude
Ord doesn’t apologize for its size or location. “We need for people to be able to be proud. Small towns have been pushed for a long time to apologize for what they aren’t, and they shouldn’t have to,” Pollard said. Instead, Ord focuses on what it is, not what it isn’t.

“A positive attitude has led Ord to believe in itself. Rural areas may have slightly lower incomes, but they also have a number of benefits, town leaders say. They have a lower cost of living than metropolitan areas, which translates into lower costs of operation and overhead for business owners. And rural communities often offer the benefits of being safe and family-friendly, with short commutes to work.

“For every 10 minutes a person sits in traffic, civic activism goes down 10 percent,” Pollard said. There is a good work life balance in rural areas, and there is more time to pursue personal interests, he added.

The “Grow Your Own” Model
Out-migration of young people is a constant challenge in rural Nebraska; trends indicate that a few young people are lost to the urban areas every year. Community leaders are working hard to recruit new people to Ord, but they are also working to re-attract the people who have left. Teachers in the Ord schools tell students about opportunities in Ord, and the kind of education they need to fill those jobs. Sometimes called the “grow your own” model, this approach is beginning to work in Ord. “Every year, we get a few students back,” Kroger said. “They didn’t understand how they could make a living here.”

“Teachers are saying ‘we would love to have such and every one of you back,’” Glaubke said. “When you get that from someone you respect, it makes an impact.” Because the public high school offers advanced placement courses, many students are graduating with several hours of college credit, and that has a huge impact on the student and the parents, she added.

The Ord Public Schools have implemented an entrepreneurship program, teaching students as early as kindergarten about business basics and encouraging them to start their own businesses. The closing and liquidation of a local business became a lesson in e-commerce for older students; the business owner collaborated with the school so students could learn how to sell merchandise on the Internet. When the ethanol plant in Ord shut down, high school students were given access to part of the land, which they farmed for experience and profit.

Business in Ord
Ord has implemented a loan program based on the city sales tax that provides low-interest loans to businesses. In the last five years, Glaubke said, more than $1.5 million has been loaned to 20 businesses, with no defaults. “But we didn’t invent the wheel,” said O’Brien. “We learned from Central City, who learned from Aurora. This isn’t a basketball game, where we learn something new and want to keep it to ourselves.”

A key part of rural development is tied to infrastructure.

Infrastructure
Infrastructure may be defined in various ways, but water, sewer, electricity, roads and Internet access are needed for any community to survive. Expand that to include schools, health care facilities, libraries and parks for a community that is even more desirable.

“For rural communities to survive in the 21st century, you need to have adequate Internet access,” Pollard said. But broadband development in rural Nebraska isn’t adequate, and that limits the growth in rural Nebraska. More bandwidth is required to be competitive in the business world. With adequate capacity, people could conduct business anywhere in the world. But rural Nebraska has varying connectivity and capacity – and few options for improvements.

“This is really important,” said O’Brien. “If we could have that up here, we would have the same advantages that they have in Lincoln and Omaha.”

The community begins construction of a new 67,000 square-foot hospital this spring, which will replace its existing hospital. Completion is expected in 2010 and is funded through the sale of $21.3 million in city bonds. The Valley County Health System, a critical access hospital, serves a six-county area. Along with the rest of rural Nebraska, Ord is challenged to find enough health care professionals to locate in the area. But leaders in Ord hope the community’s many assets will draw workers to the new facility.

Lynn Griffith, editor of the Ord Quiz, said “the education system, safety and a great place to live will draw people here. I think the future looks bright.”

Strategic Discussions for Nebraska hosted a community conversation in Ord on January 22, 2009. Participants were Nancy Glaubke of the Ord Chamber of Commerce; Lynn Griffith, Editor of the Ord Quiz; Max Kroger, Superintendent of the Ord Public Schools; Randy O’Brien, Mayor of Ord; and Caleb Pollard, Executive Director of the Ord Chamber of Commerce. Nebraska’s Economic Future

Overview

We have a vision and a plan to improve our community ourselves, not because somebody did it for us.

- Nancy Glaubke, Ord Chamber of Commerce
North Platte: from Buffalo Bill to Global Economy

Driving through North Platte, you wouldn’t take note of the town’s long and notable history, nor would you see the assets that cushion it against the worst of the global economic swings.

North Platte was laid out as a town site in August of 1866 – a year before Nebraska became a state – by Grenville Dodge, the chief engineer for Union Pacific Railroad. Dodge chose the site as the location for Union Pacific’s major shop facilities because of the area’s good water and because it was a stopping point on the Oregon, Mormon and Overland trails. Four months later, the first train entered what was then known as a ‘Hell on Wheels’ town.

Twelve years later, William “Buffalo Bill” Cody organized his Wild West Show from his Scout’s Rest Ranch north of the rail yard and transported the show by rail for nearly 40 years, ending the show’s run in 1913. Today, the Union Pacific Bailey Yard in North Platte, named after former Union Pacific President Edd Bailey, is the largest rail classification yard in the world and employs 2,600 people after former Union Pacific President Edd Bailey, is the largest rail classification yard in the world and employs 2,600 people. Still, North Platte faces unique challenges; one is the concentration of so many workers in so few businesses. To counteract that, the city is focusing on building a business-friendly environment so it can attract businesses.

“We’ve put in some pretty extensive infrastructure so a new company could just drop in,” Kaschke said, but “we need to do a better job of selling ourselves.”

Still, North Platte faces unique challenges; one is the concentration of so many workers in so few businesses. To counteract that, the city is focusing on building a business-friendly environment so it can attract businesses.

Creating Opportunities

The city is looking at ways to provide lucrative employment opportunities. “One of the things we really need to focus on is keeping our young people here. We can be more successful keeping our young people here than recruiting them to live here,” Kaschke said.

But North Platte struggles with kids not going into occupations that are needed in the community, like welding and heating/air conditioning. They all want four-year college degrees, Lange said.

“There’s kind of a disconnect between the educational system and the types of jobs that are needed,” Lange said. “You’re doing a real disservice to these kids if you don’t tell them about the jobs that don’t require a four-year degree. They’re not hearing about those jobs, and it’s kind of a shame.”

The North Platte Community College, a division of Mid-Plains Community College, provides an academic transfer program, as well as programs in business, computer, construction, transportation, health and fire and law enforcement.

North Platte also has a University of Nebraska presence; its West Central Research & Extension Center is a field-based research and extension facility of the University of Nebraska Institute of Agriculture and Natural Resources. Its faculty and staff conduct research on thousands of acres of pasture and cropping systems, then provides the resulting information to people throughout the state.

Relationship-Building

Kaschke said as mayor, he plans to build relationships with Lincoln and Omaha for economic development purposes. “You can drive back in the same day if you need to visit there,” he said.

“We’ve been working with the rest of the state to put together a young professionals conference with people in Lincoln and Omaha,” Kaschke said. “To figure out what jobs young people are interested in…what will interest and engage them.”

Judith Clark, North Platte Planning Director, said the western part of the state often feels forgotten, and it is important to have honest conversations in communities and between communities, large and small, to determine what people want and need for the benefit of the entire state.

Clark also said the western part of Nebraska, including North Platte, needs to take responsibility for telling people that smaller communities have something to offer. “There’s a feeling of security…it’s a wonderful place to raise your kids,” she said. “and you still have the opportunity to further your education.”

Kaschke said “I chose to move back to North Platte because of what it has to offer. I think we underestimate ourselves sometimes. I love that it’s a handshake community; I love the sense that I don’t have to worry about the kids. You have the opportunity to get involved and make a difference.”

I think we underestimate ourselves sometimes. I love that it’s a handshake community; I love the sense that I don’t have to worry about the kids. You have the opportunity to get involved and make a difference.

Under the mayor’s leadership, the city’s population is growing, and Kaschke says they can still have the opportunity to further your education. He said, “I chose to move back to North Platte because of what it has to offer. I think we underestimate ourselves sometimes. I love that it’s a handshake community.”
Kearney is in a perfect position in the state – right on Interstate 80, adjacent to the Platte River, nearly in the center of Nebraska. Its location has helped it maintain its status as a thriving mid-size city and a regional convention center, but there’s more to Kearney’s success than location.

“In my experience with Nebraska communities, there are two groups: the group that sits around and does nothing and the group that says ‘what are we going to do, and who is going to do it?” said Dr. Doug Kristensen, former state senator and now Chancellor of the University of Nebraska-Kearney. Kearney is in the latter category, he said.

“Kearney has a blend of education, health care and agriculture, but it’s the attitude of the business community that makes the difference,” Kristensen said.

Kearney is home to about 28,000 people and a diverse business community, as well as the University of Nebraska-Kearney. The city is large enough to be a health care, education, tourist and business destination, but small enough that people in leadership positions know one another and frequently communicate, keeping the future of the city in mind.

Kearney has been able to maintain strong leadership throughout generations by training people to fill leadership roles and operate businesses. A leadership training program is offered annually and explains how Kearney operates and what needs to be accomplished.

The community has been able to keep a critical mass of people; Kristensen said there’s a core group of people who have stayed because of the education system. “There are a lot of people; Kristensen said there’s a core group of people who have stayed because of their education system. “There are a lot of people who think they’ll stay for a couple of years and then never leave,” he said. “These people have fresh ideas that bring vitality to the town.”

Being open to new ideas, welcoming participation by young people, a positive attitude and a community-wide willingness to collaborate are characteristics of this Platte Valley community.

“There’s a tremendous amount of youth in Kearney,” said Jonathan Krebs, Executive Director of the Economic Development Council of Buffalo County. “One of the reasons that Kearney is going strong is because they have the energy,” he said.

The Science of Survival

Seventy percent of Kearney graduates stay in Nebraska, Kristensen said. Of the students who come to Kearney from out-of-state, nearly half stay. Keeping people in the community is nearly a science. “We studied the the UNK Nebraska Business Development Center (NBDC) and its director, Odee Ingersoll. The NBDC trains leaders, offers advice to entrepreneurs and studies state business statistics.

Outbound Migration

Nebraska’s low unemployment rate is pretty remarkable compared to the nation, Ingersoll said, “but the outbound migration is the more telling number, because when there aren’t jobs, able-bodied people will move to where there are jobs.” Small communities that lose businesses drive workers to where jobs are available.

Community Survival

Nebraska communities may have to collaborate with one another in new ways in order to survive, Ingersoll said. For instance, not every community needs a grocery store; one may have the grocery and another have a convenience store. “If they can let go of that, there’s an opportunity for them to realize some synergy between them,” he explained; otherwise some towns will die. The important thing is to find a way to retain Nebraska jobs and businesses.

“There is no guarantee that a community has a spot on the map forever,” Kristensen said. People will go where they think they can do their best and have opportunities, but there comes a time when communities can’t survive by themselves, and that’s when they need to cooperate. “Nebraska will always be an independent state, but we will start to realize the value of cooperation between small towns and larger cities,” he said. “Cooperation happens because of necessity.”

Business Creation

Fifty-two percent of existing entrepreneurs in the Kearney area plan to step aside in the next 10 years, Ingersoll said. Of those entrepreneurs, one-third said they plan to sell the business; one-third said they plan to pass on the business to the next generation, and one-third said they plan to simply close. “In essence, we have to create 3.4 new businesses for that person that is planning to leave,” Ingersoll said.

Greg Shea, Executive Director of the Kearney Area Chamber of Commerce, said Kearney has been fortunate overall in the recent economic downturn, but the community is starting to see some of the effects. She believes the university’s NBDC has made a positive impact on the business community through outreach to area businesses.

“There are opportunities for the businesses community to gain from those experiences,” he said.

Nebraska’s Stability Secret: Agriculture

“The source of all lasting wealth comes from the land,” Kristensen said. “Land ownership is extremely important. Our greatest assets are our wonderful farm ground and our beautiful water.”

Ingersoll said that a state must produce something tangible manufactured goods… to ensure its economic stability. Nebraska’s animal agriculture and crop production allow the state to be somewhat buffered from the economic highs and lows much of the country experiences. Although the state is affected by recessionary trends, the effects may arrive later and be less severe than in other states.

Vision for Nebraska’s Future

In 20 years, Nebraska will see the results of decisions being made now. Wise decisions related to infrastructure and consolidation will make the difference in whether Nebraska moves ahead or lags behind the rest of the country.

Infrastructure – including roads and bridges, schools, utilities, health care facilities and Internet access and capacity – are a few of the many requirements for successful communities.

“In 20 years, the infrastructure will begin to fall apart and communities will be forced to consolidate so they can afford to build new structures,” Kristensen said. “You will see about 25 very successful communities and also some very dark spots.”

Ingersoll said there will have to be successful consolidation. Communities will continue to thrive outside the eastern portion of the state, but the most viable will be communities one or two counties away from Interstate 80. “Technology has allowed us to do business anywhere, with anyone and people will need to take advantage of those opportunities,” he said.

But for that to happen, the state will have to have roads and broadband, Krebs said. The quality and capability of both physical and virtual access are critical to the state’s economic success, he added.

Kristensen believes that someday, people will flock back to rural Nebraska. “There’s safety, clean water and space,” he said. “People will realize the value of rural life… see the sunset, breathe clean air, see the animals. That’s the quality of life that will still be here.”

- Dr. Douglas Kristensen, Chancellor, UNK

Overview

Education, Pro-Business Climate Drive Beatrice

Nebraska’s small population means there are fewer people to share the tax burden than in states with more people. The solution is to attract more businesses – and people – to the state to share that burden.

Terri Dageford, Gage County Economic Development Director of Business and Industry in Beatrice, believes Nebraska has a pro-business climate; the state’s economic development incentives are lucrative and Nebraska’s quality of life is easy to sell.

Beatrice, a community of nearly 13,000 people, is located 40 miles south of Lincoln and is home to government, manufacturing, health services and education employers that employ thousands of workers in Beatrice and the surrounding area.

As Beatrice plans for its future, leaders point to education, technology, infrastructure, health care, diversity of employment, agriculture and cooperation as priorities.

Education Technology

Beatrice focuses on education as a key to preparing the town’s students for 21st-century careers, hoping that means they will stay in – or come back to – Beatrice. Technology figures heavily in the kind of exposure students receive, because technology will be a component of many jobs in the future. Skill sets that worked in the 20th century won’t be as marketable in the future, Dageford said.

Dr. Dale Kruse, Superintendent of the Beatrice Public Schools, said Beatrice students learn about career opportunities available in Beatrice and the surrounding area in many ways.

“Southeast Community College (Beatrice campus) is starting a career academy,” Kruse said. “All high school juniors and seniors have an opportunity to go to the academy, take college classes, earn high school and college credit for it. We have a health academy and a business academy,” he said. The academy also gives the students a chance to become acquainted with the people who actually work in the jobs they’re studying. The hope is that students will go on to pursue a degree in one of these areas, then come back to Beatrice to work.

Jody Easter, Workforce Coordinator with Nebraska Workforce Development in Beatrice, said a transition fair is held annually for all high school juniors at the SCC.

Beatrice campus. “They bring people from all different occupations and the kids pick different career fields,” she said. “They learn what jobs are like, the education they have, what a typical work day is like, she said. Students interested in manufacturing explore related careers in engineering, computer programming and drafting, among others, she said.

Dageford said Workforce Development and Gage County Economic Development partner to visit with high school students about the Dream It. Do It. national program that introduces young people to different careers in manufacturing.

The towels high school graduates may stay in town and take a job with a company; continue their educations at Southeast Community College’s Beatrice campus; or leave town to attend school or take a job. Kruse said he left Nebraska for a time himself, but returned to the state to raise his family.

“I think if you talk to most high school seniors in almost any community, they’re not quite satisfied where they are and want to go somewhere else,” Kruse said. “But when they get further in life, they start to think ‘what kind of a life did I have growing up?’ And I would say most kids from Beatrice say ‘we had a very good one.’ Lots of experiences, a lot of exposure, good education system, good health system. Nice size community.. people know who you are,” he said.

Those are the people Beatrice leaders hope to reach – the people who have left for a time, then look for a safe, pleasant place to raise their family.

Infrastructure

Infrastructure figures into creating a safe, pleasant place to live; Kruse said the state needs to maintain the infrastructure so communities are able to accept new employment because the infrastructure is in place.

“A lot of our infrastructure needs to be fixed,” Kruse said. “A lot of the bridges in the counties are 100 years old, and we know it.”

Sometimes elected officials are reluctant to spend the money to fix infrastructure and the issue passes to the next elected officials and infrastructure repairs move down on the priority list.

“We don’t see them until the water main breaks from 1901 and now has to be replaced,” he said.

Dageford cited a report indicating that the U.S. needs $13.1 trillion in infrastructure maintenance. In Beatrice alone, the water main break to which Kruse referred ruined the street and both the water main and the street had to be repaired.

Infrastructure maintenance not only will make communities stable, but will also put people to work, Dageford said.

Additionally, the technology component of infrastructure is important to Nebraska. “Technology, for us, is a big issue for the state because we have a lot of land and not a lot of people,” Kruse said. But the vastness of the state means nothing when you’re able to plug into the Internet for business and education, he said.

Diversification of Employment

Diversifying employment opportunities in Beatrice and Gage County means there would be many different kinds of employers in the area and hopefully, higher wages. The combination of higher wages and different kinds of employment make for a healthier community, Dageford said.

“Our hope is the Beatrice hospital will purchase ground and once that project is off the ground, we can look to attracting more professional services into our new, 150-acre industrial park,” she said.

Easter said she hopes Beatrice will see more skilled jobs in the future to provide opportunities to people who are now learning the skills to fill such jobs. After the Irwin Manufacturing plant closed in 2008, 350 workers were left without jobs. Many went back to school, she said, and will come out with a skill. Many of those people farm part-time and have spouses who work full-time, so don’t want to leave the community. However, she believes many will take jobs in Lincoln. “There aren’t jobs here that will pay them what they were making in manufacturing after 20, 30 years,” she said.

Agriculture

Agriculture is a main economic driver in southeast Nebraska and will remain so, the Beatrice leaders concurred. Animal agriculture as well as crop production figure prominently into the county’s economic profile. Many of the products are exported or used for production of fuel.

“Look at the amount of exporting that we do. Our top exports are to China, Mexico and Japan,” Dageford said. “There’s no choice but to be a global player in today’s economy, and according to the U.S. Census, about 57,000 Nebraska jobs are related to export employment, she said.

Collaboration

Economic development in Nebraska is a lesson in partnering; Dageford, Kruse and Easter all said their work with economic development, education or workforce development are “all about partnership and a unified effort for our community.”

Although the community hopes the Irwin Manufacturing plant will sell to another manufacturer, Dageford said the main concern is making sure those people find jobs, even if it isn’t in Gage County. “Columbus came to our job fair,” she said. “They were looking for 400 employees. If you don’t have a job, I want you to have a job, whether it’s in Beatrice area communities or in Columbus,” she said. “We’re willing to collaborate, to work together.”

Strategic Discussions for Nebraska held a community conversation in Beatrice on January 14, 2009. Four people braved subzero temperatures to participate: Terri Dageford, Gage County Economic Development Director of Business and Industry; Jody Easter, Workforce Coordinator with Nebraska Workforce Development; Joelyn Hansen, Beatrice Daily Sun, and Dale Kruse, Superintendent of Beatrice Public Schools.

Nebraska can't afford the luxury of complaining about what other communities have or haven't done. Instead, Nebraskans must work hard and work together for the betterment of the state as a whole.

"If we don't stop fighting these little battles of who's better and who's worse in Nebraska, we're going to lose all around," said Dick Casey, Senior Vice President of Behlen Manufacturing Company in Columbus. "People who fight aren't going to contribute anything; they're just running to waste energy," he said.

Generations of strong leadership in Columbus have established a diverse business base, but also a culture of teamwork. "We all seem to get along pretty well; we're all vying for different things, but we try to keep the big picture in mind when we're working with each other. I think teamwork is one of the answers that makes it work," Casey said.

Columbus has a population of 21,000 and describes itself as a "micropolitan" area. Located in eastern Nebraska, Columbus is 80 miles west of Omaha and 82 miles north and west of Lincoln.

Business Diversity

We've been fortunate that our forefathers have built up in the community a base of companies, and we have a responsibility not only here in Columbus but in Nebraska and in the United States. We have to build on that; we have to say they've given us a trust fund, a legacy, " Casey said.

The diversity of employment started back in the 1940s when the city fathers had the foresight to see that diversification was good, and nobody impeded the companies from coming to Columbus, said John Lohr, a retired businessman who serves on the Columbus City Council. Business in Columbus today focuses on agriculture and manufacturing; some of the major employers are the Nebraska Public Power District; an international pharmaceutical manufacturer; the world headquarters of an international steel fabrication company; an international electronics manufacturing company; call centers; transportation; banking; post-secondary education; and health care, among many others.

Adrian Sanchez, a reporter for the Columbus Daily Telegram, has worked in Columbus since 2005. He has been impressed by the work Columbus leaders have done in recruiting businesses and a work force to the community, and also by the federal and state grant proposals written and grants awarded for community projects.

Community Activism

Unique to Columbus and also important, according to Denise Kollath, Program Director for Connect Columbus, is the huge support for the community's nonprofits. "You see what the United Way campaign goal was this year, and what we hit was incredible," she said.

Columbus has a reputation for volunteerism, Kollath said, and also for finding dollars and putting the money into projects that benefit the community. Allan Vyhnalek, University of Nebraska-Lincoln Extension Educator for Platte County, said his office worked with Connect Columbus to get a $1.25 million grant for after-school programs.

Vyhnalek also said there is a core group of about 150 people who are active in the community and there are efforts to increase that number. They're trying to create an even better culture of volunteerism and community leadership. And that includes finding grant money, but also raising money in the community. "You can't go ask people for money unless you've given yourself," Lohr said. "It's then easier to contact friends, neighbors and business people to do the same thing. "It just seems that there is enough support at all levels of the community - when a good cause comes along, there seems to be a swell that supports it," he added.

Work Force Shortage

Columbus, like Nebraska as a whole, has a general shortage of workers. But Lohr said the Columbus Chamber of Commerce has been using the nation's recession to its advantage. Columbus Chamber representatives have visited areas of the country affected by earlier downturns - such as Michigan - and have recruited families to come to Columbus to work. The recession "has afforded us an opportunity to go elsewhere and bring in the labor force that our local industry needs," Lohr said.

Kollath said the work force in Columbus will also be affected if new immigration policies are enacted on the federal level. The community employs a fairly large number of new immigrants "that we desperately need in our workforce. It would certainly affect the community if many of them leave; there could be some economic impacts," she said.

Economic Partners

Columbus partners with economic development organizations, including NeighborWorks America, the Nebraska Department of Economic Development, NPPD and Central Community College (located in Columbus), among others.

NeighborWorks awarded Columbus a grant to expand housing opportunities in the community, which leaders say is badly needed. Lohr said NeighborWorks is building an entire neighborhood - 44 homes - on a 15-acre site beginning this spring. The grant proposal was written in collaboration with several organizations, Lohr said.

Working with partners has led to success in other areas, as well. Bonnie McPhillips, Regional Manager for Nebraska Workforce Development, said Apogee Retail, LLC chose Columbus for its outward-bound call center, which employs more than 250 people. "Their focus is to hire as many people with disabilities as possible," she said. "We have people in our community who are working who have never had jobs before," Joseph Mangiamelli, Columbus City Administrator, said Columbus used many resources to ensure that Apogee could locate in Columbus and provide jobs to people who never thought they could be in the workforce.

Vision for the Future

Although Columbus is a positive, thriving community, it is aware of susceptibilities and works to address them. K.C. Belitz, President of the Columbus Chamber of Commerce, said any small town is increasingly susceptible to loss of local control of the wealth in the community if the businesses are not locally-owned. "There are fewer and fewer Behlen Manufacturing companies all the time that are locally-owned, and it changes the dynamic, but we're working to address it," he said.

Mangiamelli said the railroad bisects the city and some consider it to be a dividing line. But in the next two years, that dividing line will be erased through the construction of several viaducts and possibly, pedestrian overpasses. "The community came together and decided it was about time, in the interest of becoming one community, to build the viaducts," he said.

"We will take down that wall that separates the two parts of the city," Columbus is working with the Nebraska Department of Roads, the federal highway administration, the Department of Environmental Quality and the Environmental Protection Agency to build the structures, he said.

When people look at Columbus as a possible business location, "we let them know we're positive, that we take the high road," Casey said. "You just have to get up on the platform and say 'we are good. We have a legacy to build on, so let's take it and make it work.'"

Strategic Discussions for Nebraska held a community conversation in Columbus on January 16, 2009. Participants: K.C. Belitz, President, Columbus Area Chamber of Commerce; Richard Casey, Senior Vice President of Behlen Manufacturing Company; Anne Kinnison, Columbus City Finance Officer; Denise Kollath, Program Director for Connect Columbus; John Lohr, Columbus City Council; Joseph Mangiamelli, Columbus City Administrator; Bonnie McPhillips, Regional Manager for Nebraska Workforce Development; Adrian Sanchez, Columbus Daily Telegraph; and Allan Vyhnalek, University of Nebraska-Lincoln Extension Educator for Platte County.

Nebraskans are strong individualists, have a legendary work ethic and are welcoming and helpful. But it’s the “sense of place” that evokes the admiration of a focus group of University of Nebraska-Lincoln students and graduates and it’s the single characteristic that would be most likely to keep them in the state.

“People care about more than just themselves here,” said Josh Roos, a recent UNL graduate. “It’s just a good place to be.”

Graduate student Ryan Downing said “there seems to be a sense of family, home or familiarity anywhere you go in Nebraska – even in the larger cities.” He said people in Nebraska are closely-connected and it doesn’t take long before conversations lead to those connections. It is important to keep pursuing other opportunities, both personal and professional, for networking and making friends, Downing said, but he believes the sense of familiarity in Nebraska makes it easier to network.

Focus group participants agreed that Nebraskans aren’t afraid of working hard, either for themselves or for others. And the group agreed that the work ethic helps drive the state’s economy.

Will You Stay or Leave?

Carlos Lopez will start a job with a privately-owned Lincoln company after he graduates from the University of Nebraska-Lincoln – shortly after this magazine is published in May 2009. Although he interviewed nationwide, he liked the company in Lincoln because they grew to love the city. Lopez also found the company to be more flexible and have less of a high-pressure environment than other companies with which he interviewed.

Many of the other focus group participants intended to stay in Nebraska if they’re able to find employment, if not Nebraska, they plan to stay in the Midwest. Kevin Jones, a graduate student, said he believes there are good jobs in the Midwest, but there are even more elsewhere. “In the end, you have to follow what you want to do and find a nice balance between sacrificing what you want in a job or what you want in a place to live and find some sort of happy medium,” he said.

Downing, who is fluent in both Spanish and English, said his desire to use his second language in a career may take him to a coastal city like Miami, Houston or Los Angeles. He hopes to work for a public relations or marketing firm that seeks out and retains Hispanic or Latin clientele. However, his long range plan is to build a successful career, then eventually return to Nebraska to teach. “I still anticipate feeling a pull back to Nebraska at some point in my life,” he said.

Jacob Varvel, also a graduate student, said he plans to go where the job is, but he hopes to remain in the Great Plains area. “It’s really a quality-of-life issue – if you go maybe to the edges of the country, you’re not going to find that sort of community that you might find in Nebraska, Oklahoma, Kansas, South Dakota or any of those states,” he said.

Phil Boll said that after he earns his graduate degree, he and his wife plan to move to the Omaha area, or perhaps Kansas City or another, larger Midwest city. They would like to remain in the Midwest, he said, because “we really fit better in the Midwest than the East coast.” However, Boll said it will come down to where he’s able to find a job.

Nkem Kalu is working on a Ph.D. in political science, and was the only international student in the focus group. Although she was born and raised in Nigeria, she was educated in Zambia. She came to Lincoln when she was 16 to begin her studies at UNL. “My current academic program is directed toward community development in rural parts of the developing world,” she said, so she expects to move out of the United States following completion of her doctorate. But she is keeping an open mind. “Should things change, then chances are I’ll be looking for placement in Nebraska or somewhere not particularly far,” she said.

The last seven years have been an opportunity for me to build a life, a network and a home base out of Lincoln, Nebraska,” he said.

Economic Drivers

Nebraska’s economy is driven by the agriculture industry, Downing said.

“That’s the elephant in the room, basically; everyone knows that,” he said. “We don’t want to make it an easy answer, but that’s what generates the economy. It’s all still very much tied into that work ethic and the people who are raised on farms, generations of farmers and businesses, too,” he said. Small businesses in small towns also help hold up the state, he added.

“If you look away from the agriculture industry, you still have a big chunk of the economy there,” Boll said.

Schools are also economic drivers in Nebraska, Jones said. Nebraska has many universities, colleges and community colleges and they employ large numbers of people. Additionally, Jones said the thousands of students who attend the state’s institutions of higher learning must have part-time jobs. “That’s a lot of money that’s getting pushed through,” he said. “That’s a big chunk of the economy there, I think.”

Downing said the state’s privately-owned corporations may not be huge by national standards, but they are anchors of employment in the Nebraska cities where they exist. These companies “seem to be more of a fit for Nebraska because they are not huge companies and they still value the people who live there,” he said.

Expectations of State Government

Nebraska’s logical role in the global economy is agriculture, Roos said. “There are a few certain things that are absolutely needed for survival before everything else. And one of them, obviously, is food.” Roos said prices on technology and such are going to fluctuate, but people are always going to need food. “That’s a pretty essential role that we have,” he added.

“Nebraska needs to be better at discovering the global economy and the fact that she can be a player in the global economy,” Kalu said. A large number of international students have chosen to attend the University of Nebraska-Lincoln for its strong programs in biological sciences, agriculture and business, and UNL has the support system to offer these students the help they may need, she said.

The university’s educational partnerships and exchange programs with universities throughout the world are bringing different perspectives and expanding the learning experience of students here, she said. These are partnerships that create a platform for future collaborations. “It is still in its preliminary stages, but there is a discovery taking place,” she said.

Nebraska as a Global Player

This focus group expects Nebraska state government to use tax dollars responsibly and do a better job of keeping people in greater Nebraska informed about how dollars are being used. Downing, who is from the southwest part of the state, said “many people around (Lincoln) are more aware that things are clicking along the way they should be. But I think there needs to be more information sent out to the western part of the state. I think it would help them to trust their government more.” He would like elected officials to be active in the government, pay attention to and respond to their constituents and acknowledge that there is another, larger part of the state off to the west.

The western part of Nebraska is somewhat disconnected from the way the state government works and the way it works for the people who live in the state, Jones said. Also from the southwest part of Nebraska, Jones said “we feel a little left out as citizens of the state.”

From a different perspective, Boll said he doesn’t like the debate between east and west, “because we depend on each other. But unfortunately, it exists. Sometimes you get in this – you know – the business in Omaha wants their interests and the people in Scottsbluff want theirs, but we are so dependent on each other!”

Boll added that Nebraska doesn’t have a lot of the natural attractions offered by states with mountains and oceans, but “we do have a hard work atmosphere. We do have stability. We generally have a fairly low unemployment,” he said. “The state government needs to encourage these things that invite companies to come and build and grow and stay here and build jobs that are stable.”

Strategic Discussions for Nebraska held a focus group discussion with seven University of Nebraska-Lincoln graduate and undergraduate students on February 2, 2009. Participating: Phil Boll, Blair; Ryan Downing, Strutton, Kevin Jones, Cambridge; Nkem Kalu, Nigeria; Carlos Lopez, Lincoln; Josh Roos, Lincoln; and Jacob Varvel, Lincoln. Boll, Downing, Jones, Roos and Varvel have lived their entire lives in Nebraska; Kalu has been in Nebraska for seven years, and Lopez has lived in Nebraska for six years.

Strategic Discussions for Nebraska solicited articles for this publication from Nebraska colleges, universities and businesses. The articles represent a variety of interesting perspectives on Nebraska’s economy.
Nebraska's Economic Future

**Agriculture and Urbanization**

Agriculture is perpetually lost in the Top 10 Questions because it is not central to every community in Nebraska. However, it is an essential component of the vitality of Nebraska as a whole and needs to be factored into the Top 10 Questions, even though it may not be the starting point for considering options.

Urbanization is more than just the growth of urban places in size and number or the growth in percentage of population living in urban places. It necessarily involves consideration of how cities are linked to each other, to rural places and to the continuously emerging interstices. I will integrate this important concept after first applying the capital-assets approach to the Nebraska experience.

**Overcoming the Crisis of Hope**

By David LaIcuta, Ph.D., Nebraska Wesleyan University

Change requires imagination, vision, cooperation and effort – all driven by hope. Yet, the scope of the challenges we currently face has led to a learned helplessness of the nation's collective spirit and a crisis of hope in the individual.

Overcoming that crisis of hope will require putting people back into the equation when planning for the future of Nebraska and the country.

Throughout history, people have formed human systems – families, communities, economies, political systems and culture. Each is affected by the geography and environment of the region. Nebraska's small population is unevenly distributed; two-thirds of the population is located in the eastern one-third of the state. This distribution poses questions about the roles and sustainability of communities. Nebraska plans for its future, regional and state leaders must consider some key questions. Each Nebraskan might consider his or her civic role in the state, relative to these questions:

**Top 10 Questions Related to the Future of Nebraska's Communities**

1. Which communities, or types of communities, are sustainable?
2. Why do people choose to live in various Nebraska communities?
3. How can we construct a culture tied to place, community and region?
4. What role does identity play in why people choose to stay in Nebraska?
5. How can current and impending demographic changes be harnessed by Nebraska communities?
6. How can Nebraska communities benefit from the global commitment to developing non-petroleum-based energy systems?
7. Why is it important to have a vital hierarchy of place in Nebraska?
8. What links between urban, town and rural places are necessary to their mutual survival, and how do these links reflect globalization?
9. How is entrepreneurship important to overall community vitality?
10. How will decisions be made as to which communities receive state support?

**Capitals and Sustainability of Communities**

Not everyone believes Nebraska may be sustainable, though no community should be "written off" without a serious attempt to assess its capital assets, matching them with market opportunities in regional, national and/or global areas.

**Social Capital – Participation Central to Success**

The assessment process can't be left solely to experts, outsiders and elites (i.e., elected politicians, the wealthy and politically influential). It requires broad community participation, with all stakeholders, including relevant experts and elites ultimately incorporating appropriate state, regional and national policy support – either existing or sought. Participation is a measure of existing social capital and also a mechanism for building it. Participation is one of the central components of capital – assets that each community uses to enhance its vitality and sustainability.

**Additional Capital**

Generally, consideration of capital has been limited to financial capital and human (or intellectual) capital. However, Putnam (1993, 2000) and others say there are additional important capitals. A more complete list should include:

- economic capital
- human capital
- built capital
- environmental capital
- cultural capital
- economic capital
- bridging social capital
- political capital
- spiritual capital

These capitals create a common framework for integrating knowledge accumulated by different disciplines. At the same time, they decrease the political control that allows economic and efficiency concerns to take precedence over all other concerns when assessing community health and vitality. Consequently, the evaluation process includes human concerns, social impacts, long-term ecological impacts, environmental impacts and differential impacts by race, social class, ethnicity and gender. Because economic capital (money, wealth, goods, etc.) and human capital (education, skills, knowledge, etc. held by people) are well discussed and understood, I focus primarily on the remaining seven capitals.

**Capital Assets – Building Consensus**

Based on my international work with rural communities, periurban settlements and urban governance systems, I favor a capital asset in size and number that the American dream is about: sense of place and charting sustainable futures. My experience also reinforces the necessity for broad stakeholder participation in any planning and development process.

Cornelia and Jan Flora, in their third edition of Rural Communities: Legacy and Change (2008), do an excellent job of applying these ideas to the American experience and more particularly, to the Midwest. Based on their research across rural communities, they show the many and complex interactions among the various capitals and their distribution across different segments of local communities.

However, the capital assets approach is not a magic formula for creating a successful community. Instead, it is a practical and analytical framework for allowing a community to find entry points into a community-wide discussion aimed at sustainable development. Stakeholders in the community emphasize different values and capital strengths. These differences have to be bridged. Often, civic groups are the cross-cutting community organizations linking these underlying interests and countering rigid positions. Principled negotiation, like that advocated by Fisher and Ury in Getting to Yes (1981), is useful. It also means being open to surrendering sacred cows, stereotypes and all the cherished mythologies underlying social advantage and disadvantage in order to benefit everyone. It means listening to one another and respecting the legitimacy of everyone's interests.

Community action will require harnessing the entrepreneurial spirit. What is needed is a balance between the motivating power of self-interest and the sustainability of collective benefit. Sustainable decisions rest on characteristics such as diversity, flexibility, redundancy and feedback. Communities will be more successful when the various capitals are in a dynamic equilibrium with enough interdependency that they continue to have influence – even if not always equal.

In the end, the interest of the individual is linked to the interest of the community, which is linked to the interest of the larger urban and regional hierarchy.

**Cultural Capital – Individualism, Work Ethic and Fairness**

No single description fits all Nebraska communities, but there are some regional characteristics that are significant.

First, cultural capital in Nebraska is highlighted by three core values – "rugged individualism," a strong work ethic and a beachhead sense that people vary across social classes and place, but are fairly present throughout. These are important values in terms of their relevance in attracting economic enterprises and entrepreneurial investment. They are relevant at all levels, to both labor marketing strategies and facilitating entrepreneurship.

Second, a sense of place links business owners, farm families and working class individuals to a larger degree than managers and professionals. Therefore, attracting and maintaining a professional class requires appealing to specific characteristics which match place with personal/family interests of these individuals. In general, people most likely to stay in Nebraska or relocate here are those who have pre-existing ties to the state and those whose family aspirations include children and a perception of a family-friendly quality of life. Additionally, another group of potential recruits lies with marketing certain natural capital features to appropriate target groups and individuals.

**Natural Capital – the State's Natural Amenities**

Natural capital refers to the natural amenities of a region. Nebraska拥有广泛的自然资本，包括草原、湖泊和美丽的自然风光。人们在追求某种形式的退休生活时常常选择熙尔山和其周围的壮观景色。历史和人类资本，包括教育培训和技能，对年轻一代尤其重要。他们有前所未有的受教育程度和技能，将这些带入他们的退休生活。他们也有一个前所未有的遗产文化——包括各种形式的参与。例如，在性别权利或教育领域，人们可能希望从他们的退休生活中获得更多的参与。他们可能会为了更富有创造力的方式去使用他们的退休生活，包括工作和参与公共生活。这需要改变社区思维方式以及规范和程序的改变。它也需要社区参与，以形成公共-私人合作的新模式。这将有助于建立一种新的社区结构，以此来构建新的资本和体系的结构。
important: transportation, communication and environmentally-sustainable building.

Some communities already have access to traditional transportation networks, such as the Interstate system or rail corridors. But success into the future will depend on the ability of communities to develop one another, with the state and with private enterprise to develop a new generation of transportation options. This is closely connected to the role of new electronic communication technologies that alter the relationship between work and place and between commercial enterprise and place.

For rural Nebraska, the comparative advantages of low land values, inexpensive labor, lower taxes, lower labor costs and relatively fixed shipping costs (depending on the availability of mass carriers such as FedEx and United Parcel Service) must be paired to the quality of life assets desired. Some of those assets include relief from pollution and urban stress, good schools, low crime and so forth. These traits will assist in attracting talented professionals and families. The ability to move forward in innovative, environmentally-conscious building design and more environmentally-retrofitted housing stock will also appeal to professionals and to the desire for new energy alternatives.

While small communities have limited resources available for redeveloping built capital, their small scale and size affords greater flexibility in adapting to new alternatives. Goods and services can be integrated with existing cultural capital such as values and preferences. It is important to recognize that the issue is not simply deciding what is “efficient” and then dealing with the consequences of disrupted preferences, which is the classic economic model. The preferred capital assets model is to create a solution which, from the start, incorporates cultural capital and community values into the development of built and financial capital. Where spiritual capital fits into this enterprise, we defer to the end of this article after considering the urban hierarchy.

Urban Hierarchy

Thus far, the focus has been mostly on the role and needs of small Nebraska towns and rural communities, but this does not imply a lack of concern for larger urban centers. An early decision as to airport location would have greatly facilitated innovative solutions to the overall transportation problem. After the first two decades of the twentieth century, communities and networks of the inherent limitations of the existing hierarchy is similar to acknowledging the impending retirement of the baby boom generation. Both are facts of life, both present challenges and both offer opportunities.

A fundamental need is to create a balance between the bonding social capital – the value of seeing oneself as a Lincolnite or an Omahite – and the bridging social capital – the value of seeing oneself as a Nebraskan. In the absence of civic human agency, decisions can be directed simply by corporate board room fiat far away from the community or the state that is experiencing the impact. Increasingly, the source of the impacts can even lie elsewhere in the world.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.

The Prime City Structure - Nebraska's Disproportionate Growth

Instead, Nebraska has what sociologists and demographers call a prime city structure, and in which one city vastly out-distances all others in size. There is a large volume of literature documenting the many negative consequences of this condition. The bottom line of this literature is that the dominant city draws itself a disproportionate share of the resources (financial, political, social, economic, entrepreneurial, demographic, etc.) of the political entity (i.e., Nebraska). The dynamic of this influence is seen clearly when one looks at the development of the eastern metropolitan corridor in Nebraska.

Comparing Nebraska to a Developing Country

Curiously, in terms of its urban hierarchy, Nebraska as a state looks like the situation in many developing countries. Geographers and sociologists use a “rank size rule” to define a balanced urban hierarchy. This rule states that there should be multiple cities of equal rank (i.e., those with populations about one-half that of the largest city), three third-ranked cities (i.e., those with populations about one-third that of the largest city) and so on. Clearly, this is not the case for Nebraska’s urban hierarchy.

The Primate City Structure - Nebraska's Disproportionate Growth

Ineffective Regional Planning

Even as the Interstate system is widened to six lanes between Omaha and Lincoln, the respective municipalities resist effective regional planning, clinging instead to a competitive posture which flies in the face of both efficiency and larger community interest. The problem at the urban hierarchy level mirrors the problem of elites (i.e., the privileged and powerful) within communities. Neither the existence of elites nor the presence of a prime city is necessarily a problem in and of itself.

The problem arises when their undue dominance allows them to exclude the interests of non-elites and “lesser” communities from the discussion and decision-making. If the concentration of power, leading to exclusion and capital discounting, that creates less-than-optimal solutions.

The Airport Example

An example of this is two airports within the eastern metropolitan corridor, neither with good land transport.

The most effective public policy is likely to be the one that creates a level playing field for competing interests while facilitating structure that helps to secure social capital at all levels. Such bridging mechanisms include:

- public-private partnerships
- multi-jurisdictional service providers
- intergovernmental panels and boards
- trans-professional organizations
- innovation networks and hubs
- intra-community civic organizations

The important point is that they allow various stakeholders to share interests instead of locking them into stereotyped perceptions of each other. It is especially the case when the participants come together to solve an issue which can’t be solved by any one constituency alone. The objective is to expand and strengthen bridging social capital, not to rubber-stamp a decision already made without full disclosure.

Race, Ethnicity and Gender in Nebraska’s Future

Race, ethnic identity and gender issues will be integral to Nebraska’s future as they have been to its past. The context of life has changed dramatically along these dimensions within both Nebraska and the nation as a whole. Not only will demographics continue to shift in the future, but the nature and social meaning of these categories will also continue to change. So important are these changes that the topic is worthy of a completely separate article in a separate publication devoted solely to such issues. Nonetheless, for may be a peer without equal within the current system, but it is not itself the system. In the end, the people who make up ConAgra have to work, live and find meaning in the same system that they have the power to shape.

The same can be said for Omaha as a city, except the power brokers are often more public in their personas. Expecting ConAgra or Omaha as a city to act altruistically is fantasy. However, as the owners. The system depends upon many individuals, conglomerates are large stakeholders in this system, but not the owners. The system depends upon many individuals, communities and linkages. ConAgra, for instance, may be a peer without equal within the current system, but it is not itself the system. In the end, the people who make up ConAgra have to work, live and find meaning in the same system that they have the power to shape.

The important point is that they allow various stakeholders to share interests instead of locking them into stereotyped perceptions of each other. It is especially the case when the participants come together to solve an issue which can’t be solved by any one constituency alone. The objective is to expand and strengthen bridging social capital, not to rubber-stamp a decision already made without full disclosure.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.

Outcomes

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power. Whether they are public or private, national or state, global or local. What seem important are the forms of bridging social capital that link and harness human agency at the local level to coordinate effectively with human agency and systemic needs at larger levels.

Governance, Regulation, Policy

One form of such bridging social capital is governance; another is regulation; still another is policy.

Governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation and governance refers to the adequacy of fair representation. Like Hispanics, they offer alternative models for community response to this change has been as mixed as it has to other “new” groups that have settled in Nebraska over its history. Some communities have adapted well, recognizing the socioeconomic value of economic diversification while others have hardened their stereotypes. Clearly, much more could be done.

The African-American, Hispanic and Native American groups, such as African-Americans and Native Americans pose ongoing challenges for Nebraska in terms of continued isolation, deprivation and exclusion. These are old social divisions, embedded in the structure of our social arrangements, yet both African-Americans and Native Americans have strong cultural ties to Nebraska and will continue to play a significant role in the future of the state. Like Hispanics, they offer alternative models for community development and new perspectives on our future.

The Asian-American population will continue to grow at a rapid rate, influencing Nebraska’s future in unknown ways. They are the fastest growing segment of the population in the U.S. and Nebraska is no exception to this growth. Asian-

Race, Ethnicity and Gender in Nebraska’s Future

Race, ethnic identity and gender issues will be integral to Nebraska’s future as they have been to its past. The context of life has changed dramatically along these dimensions within both Nebraska and the nation as a whole. Not only will demographics continue to shift in the future, but the nature and social meaning of these categories will also continue to change. So important are these changes that the topic is worthy of a completely separate article in a separate publication devoted solely to such issues. Nonetheless, for may be a peer without equal within the current system, but it is not itself the system. In the end, the people who make up ConAgra have to work, live and find meaning in the same system that they have the power to shape.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.

The outcomes for Nebraska’s small towns and rural communities are tied strongly to what decisions are made in the corridors of power.
Americans have the highest levels of educational attainment in the country and are certainly part of the professional class that can add value to Nebraska’s many communities. Again, the challenge for all Nebraskans is whether adequate capital can be harnessed. If not, the differences will sap human capital, and largely-irrational fears. If so, a great wealth of diverse talent can be built to overcome historical bias.

We Can Do Better!

It is with this hope that I suggest that we can do better. We can do better for ourselves by doing better for others. We can do better for our children by doing better for our communities. We can do better for our environment by working together, harnessing our long-range self-interest, enjoying the success of our neighbors and living more simply and intelligently as a community.

A final form of capital needs to be incorporated into the capital assets approach and into the pursuit of sustainable community development – spiritual capital. I do not mean primarily religion, religious affiliation or religiosity; although spiritual capital may or may not include these things for a given individual. Instead, spiritual capital is the spiritual enlightenment from which springs hope and belief in the fundamental worth of life and shared experience. It seems to me that the significance of all forms of capital – indeed, of human capital assets approach and into the pursuit of sustainable community development – spiritual capital. I do not mean primarily religion, religious affiliation or religiosity; although spiritual capital may or may not include these things for a given individual. Instead, spiritual capital is the spiritual enlightenment from which springs hope and belief in the fundamental worth of life and shared experience. It seems to me that the significance of all forms of capital – indeed, of human capital

Science as an Engine for Economic Development in Nebraska

By William M. Wehrbein, Professor Emeritus, Nebraska Wesleyan University

When science, technology, and economic development are discussed today, the conversation usually focuses on biotechnology, pharmaceuticals, or robotics. But the science most crucial to the Cornhusker State’s economy in the 20th century was clearly the development of hybrid seed corn.

Between 1870 and 1930 the average yield in the U.S. leveled off at about 30 bushels per acre. Last year, the average yield was 154 bushels per acre. In 2007, corn production contributed $6 billion to Nebraska’s Gross Domestic Product of $80 billion. Let’s take a closer look at the scientific basis of this extraordinary achievement.

The Science Behind the Success – Hybrid Seed Corn

Each corn plant produces separate male (tassel) and female (kernel) blossoms. The ripened kernel results from the combination of genetic material from both the plant that produced the kernel and the plant that produced the pollen grain that fell on the silk attached to that kernel. In the field, each open-pollinated plant is fertilized by pollen from many tassels growing around it, and the combination of genetic material, or hybridization, occurs by chance. By choosing the best ears at harvest time and using them for next year’s seed, generations of farmers were able to gradually improve the strain.

Research to improve seed by controlling genetic material directly began at the Connecticut Agricultural Station at New Haven, and the plants produced by these single-cross hybrid seeds from a single ear, plants were forced to self-pollinate. Seeds from plants with one particular desired trait were used for the next generation, while the rest were discarded.

After several generations, the stalks and ears became smaller due to the loss of hybrid stimulation, but all the seeds from a given ear were inbred, with identical genetic traits. The next season two inbreds were planted in alternating rows and the tassels of one removed before the appearance of pollen. All seeds produced by these plants must have been fertilized by the other inbred, and the plants produced by these single-cross hybrid seeds exhibited astonishing vigor as well as the traits of the parent generations. Soon, young agronomists from land-grant universities in the Corn Belt were coming to learn these techniques.

Desirable traits include the ability of the plant to thrive in hotter, drier, or cooler conditions; resistance to disease and insects; stronger stalks; quicker maturation; and enhanced response to soil fertility. By combining traits it became possible to produce a particular variety for a specific geographical location and growing condition. For example, a fast-maturing (but perhaps lower-yielding) variety might be replanted to replace seedlings destroyed by a late-spring freeze. New varieties were developed to thrive in locations where corn had not been grown before. Due to the prevalence of broken stalks, open-pollinated corn had to be picked by hand. New hybrid varieties with superior stalk strength could be harvested with mechanical corn pickers.

Between 1870 and 1930 the average yield in the U.S. leveled off at about 30 bushels per acre. Last year, the average yield was 154 bushels per acre. When Lewis Harris completed his M.S. degree in chemistry at the University of Nebraska he could find no suitable employment. It was the summer of 1933. With the $100 he had saved to fund both his honeymoon and some salvaged equipment, Harris rented Harriss Laboratories in Lincoln. Later, Harris specialized in the testing and development of new drugs, and served as chair of Smith Kline Pharmaceuticals. In 1998 Harris Labs was acquired by MDS Pharma, which employs 4,000 people in 23 countries.

STRATEGIC DISCUSSIONS FOR
30 largest foundations in the U.S. and distributes about $90 million per year in grants and programs related to advancing entrepreneurship and improving the education of children. Advancing its pro-productivity and pro-innovation public policy agenda, The Kauffman Foundation and the Information Technology and Innovation Foundation publish the State New Economy Index, assessing each state’s suitability for the new economy of the 21st century.

That new economy, as defined in the report, is knowledge-dependent, global, entrepreneurial, rooted in information technology, and driven by innovation. Since 1980 global trade has grown 2.5 times faster than global Gross Domestic Product. In the 60 years following 1917 it took on average of 30 years to replace half the firms that went out of business in mid-60s, ISCO began to specialize in liquid chromatography separation instruments and environmental water monitoring instruments. ISCO was sold to Teledyne Technologies when Allington retired in 2004, and Teledyne Isco became one of more than 50 Teledyne companies.

Li-Cor
In 1967, the Agronomy Department at UNL initiated a project to promote grain sorghum as a world food product. William Biggs was hired to develop research instruments to monitor usable solar radiation for photosynthesis in the field. Biggs established Li-Cor in 1973 to manufacture these and similar sensors. In 1987, he sold his privately held company with 200 employees to subsidiaries in Germany and the United Kingdom and markets environmental and biotechnology products used in over 180 countries.

Streck, Inc.
Headquartered in Omaha, Streck, Inc. manufactures hematology, chemistry, and immunology products for the marketplace. Established in 1971 by Dr. Wayne Ryan to manufacture automated instruments to count the cells of patient blood samples, Streck now maintains 70% of the world market of hematology reference controls. Note that most of these firms began when a single individual with a scientific background was able to identify and meet a need of the local community. Each of these firms thrived and expanded into new but closely-related areas. Most have experienced some kind of a crisis in leadership when the first generation retired, and were eventually merged into a large multinational corporation.

State New Economy Index
Probably there has been no more thorough analysis of the challenges facing regional economic development than that of the Kauffman Foundation’s Entrepreneurship Region Index. Published in the mid-60s by the late entrepreneur and philanthropist Ewing Marion Kauffman, the Kauffman Foundation is among the 30 largest foundations in the U.S. and distributes about $90 million per year in grants and programs related to advancing entrepreneurship and improving the education of children. Advancing its pro-productivity and pro-innovation public policy agenda, The Kauffman Foundation and the Information Technology and Innovation Foundation publish the State New Economy Index, assessing each state’s suitability for the new economy of the 21st century.

How Does Nebraska Stack Up?
The 2008 State New Economy Index uses 29 different indicators to ascertain each state’s readiness to participate in the new economy. These indicators range from number of patents issued to the number of Internet domain names. How does Nebraska stack up?

In the overall state-by-state score Nebraska ranks solidly in the middle – 27th out of the 50 states. But there is some good news: Nebraska’s rank has risen from 36th place since 2002. Our state is number one in so-called “gazelle” jobs, which are firms with annual sales revenue that has grown 20 percent or more for four straight years. In fact, in the category of economic dynamics, which is an aggregate of six indicators, the Cornhusker state has moved from 14th place to 6th in only one year. Nebraska also achieves high rankings in the number of Information Technology professionals (17th), the number of farmers connected to the Internet (18th), high-wage traded services (10th), and the fraction of the state’s population using the Internet (16th). Nebraska ranks 5th in the use of the computer and Internet in schools, and that’s just in metro areas. Weeping Water recently provided every student in its high school with an 8800 MacBook laptop computer.

Other indicators were not so rosy. Nebraska’s Research and Development investment by private industry ranked only 35th, and in the number of high tech jobs, only 29th. As for the number of scientists and engineers, probably the indicator most relevant to this article, Nebraska ranked 58th. As far as the share of the workforce invested in entrepreneurship, Nebraska ranks 49th of the 50 states – our worst showing.

Still, Nebraska’s overall rank was higher than any of its surrounding states except for high-tech heavy Colorado (10th).

Today’s Challenges
The immediate challenge of the current economic slowdown is to restore credit markets and return to full employment. But beyond that, the new economy for this new century faces the challenges and opportunities of achieving the promise of the digital revolution, employing the next wave of innovation (robotics, nanotechnology), transitioning to new energy sources and using globalization to enhance productivity and quality of life. In addition, the uneven geographical distribution of past economic development has led to unnecessary costs as well as benefits. In the last decade, 30 percent of job growth in the U.S. occurred in just five states. Economic opportunities ought to be expanded in regions where the cost of living is lower and the infrastructure not so burdened.

Collaboration in the Global Economy
Understanding and managing the complex interaction among governments, firms, universities and research laboratories will determine the impact of science and technology in the global economy. Frequent conferences, especially in Europe, bring together leaders to analyze and promote this new economy based on knowledge.

Research Parks
The preferred model is the “technopol,” a critical mass of R&D facilities and companies that require R&D, in the vicinity of a university, with room for spin-offs and start-ups. Necessary for success are an attractive environment and available housing, access to highways and airport, excellent telecommunications facilities and a substantial pool of trained and motivated labor. The prime example is Research Triangle Park (RTP) in central North Carolina, a 7,000-acre campus home to more than 170 companies employing 42,000 people, which transformed this region previously known primarily for tobacco and textiles. A smaller operation, Centennial Campus at North Carolina State University (1,300 acres over 60 corporate and government partners), was cited by University of Nebraska-Lincoln Chancellor Harvey Perlman as a model for Nebraska Innovation Campus, which will provide a site to expand university research and build private sector partnerships for the long-term economic benefit of all Nebraskans. But we can’t expect the enormous success of RTP to be repeated everywhere.

Studies have indicated that public and private investment in the regional knowledge infrastructure, as well as the presence of local venture capital, were crucial to success in North Carolina. Will Nebraska achieve comparable success?

James E. McClurg, University of Nebraska Regent and President of Technical Development Resources Company, noted some other positives for Nebraska: a healthy relationship between business and government, relatively healthy state economy and state government, and a statewide consensus to create new jobs.

Nebraska doesn’t have to beat Boston, noted McClurg. We can still leapfrog the world with innovations in areas such as water quality and biofuel production.

Success Depends on Planning, Collaboration, Accepting Change
By Dr. Timothy Donahue and James Koehn, J.D., CPA, Chadron State College

Nebraska's economic future depends on planning for the future, working together instead of competing, accepting great changes, and understanding Nebraska's role as an integral part of both the U.S. and global economies.

Just as the human body uses different muscle groups and organs to accomplish various functions, Nebraska does the same. If one body part malfunctions, it affects the whole body. We work and plan independently, but the health of one part contributes to the health of the whole. If Nebraskans deal with challenges and take advantage of opportunities, the state can succeed in the global marketplace and as a result, the state and the communities will prosper.

Nebraska's future and sustainability hinge on recognizing the changes necessary and being proactive in our responses.

“The Five New Realities of Economic Development in the 21st Century,” written by Sandy K. Baruah, head of the Economic Development Administration, shows:

1. We are in a global economy.
2. The pace of change will continue to accelerate.
3. The components of competitiveness can no longer be pursued separately.
4. Partnerships are not just taking place in urban areas; much of the emphasis is on connecting its vast rural landscape and workforce to trade centers and markets around the world.
5. Innovation is the only sustainable competitive advantage.

Nebraska's Systems
Nebraska is composed of at least four systems; the sub-systems work independently but function as part of the total system, which is Nebraska:

1. Federal, state and local government
2. Business and industry, agribusiness
3. Non-profit foundations
4. Human capital

Federal, state and local government
The state and federal levels of government serve many functions in the management of local governments and their citizens, including developing and maintaining infrastructure.

The federal government is the key to making global trade opportunities a reality. We must prove they understand our market, can provide adequate services in a cost-effective manner, and are working to become essential.

Business and industry; agribusiness
Telecommunications has allowed Nebraska businesses to participate in the global economy. According to Telecommunications Industry News (reported by Scarborough Research), broadband penetration has grown by 300 percent in the United States in the past six years, allowing people to become online entrepreneurs.

Approximately 49 percent of American adults now have a high-speed Internet connection in their household, compared to just 12 percent in 2002. The Digital Subscriber Line (DSL) represents the majority of this increase, with DSL increasing by 575 percent in the past six years.

Broadband has made it possible for Nebraskans to live where they choose. Using online capabilities, they can attend college, conduct business, obtain research and use functions such as Global Positioning Systems (GPS) and Wi-Fi (wireless Internet) for navigation and crop production, according to Telecommunications Industry News. This capability allows people to sell merchandise or services worldwide.

The Kauffman Index of Entrepreneurial Activity is the leading indicator of new business creation in the United States. Published by the Kauffman Foundation, this index captures the first month of significant business activity by new business owners, and is the earliest documentation of new business development in the country.

In 2007, changes reported in entrepreneurial activity include:
1. For men, the entrepreneurial activity rate increased from 0.35 percent in 2006 to 0.41 percent in 2007. In contrast, the rate for women decreased from 0.26 percent in 2006 to 0.20 percent in 2007.
2. Latinos’ entrepreneurial activity increased from 0.33 percent in 2006 to 0.40 percent in 2007. Additionally, the entrepreneurial rate of immigrants rose from 0.37 percent in 2006 to 0.46 percent in 2007, which compares to an activity rate of 0.27 percent in the native-born population.

Nebraska’s Economic Future
Food and water are fundamental resources that are almost impossible to replace if we don't manage them properly. It is up to us – the citizens of the world – to make the final decisions in agriculture. We must address long-term planning over short-term profit decisions if we intend to pass a healthy system to the next generations.

“Food, next to life itself, has become our greatest common denominator. It is availability, quality, price, and its reflection of the culture it feeds and its moral and religious significance make it quite literally history’s ‘staff of life.’ Today, in the never-ending worldwide struggle to determine who will control its production, quality and access, food is a natural resource that is no longer viewed first and foremost as a sustainer of life. Rather, to those who seek to command our food supply it has become instead a matter of corporate cash flow, economic leverage, a form of currency, a tool of international politics, and an instrument of power – a weapon!”

Victor Davis Hanson, a former California raisin grape grower, wrote in "Fields Without Dreams" (Free Press, 1996) "The final verdict on the future of the American farm lies no longer with the farmer, much less with the abstract thinker or the politician, but rather with the American people themselves – and they have now passed judgment. They no longer care where or how they get their food, as long as it is fresh, firm and cheap. They have no interest in preventing the urbanization of their farmland as long as parks, Little League fields and an occasional bike lane are left aside the concrete, succotash and asphalt.

“They have no need of someone who they are not, who reminds them of their past and not their future. Their romanticism for the farmer is just that, an artificial and quite transient appreciation of his rough-cut visage against the horizon, the stuff of a wire commercial, cigarette ad or impromptu rock concert. Instinctively, most farmers know this. It’s the real reason they are mad.”

Jefferson wrote in a letter to John Jay in 1809, said: “An equilibrium of agriculture, manufactures and commerce is certainly essential to our independence. Manufactures sufficient for our own consumption of what we raise the raw materials (and no more). Commerce sufficient to carry the surplus produce of agriculture beyond our own consumption to a market for exchanging it for articles we cannot raise (and no more). These are the true limits of manufactures and commerce. To go beyond them is to increase our dependence on foreign nations and our liability to war. These three important branches of human industry will then grow together and be really hand maidens to each other”

Non-Profit Foundations
Nebraska non-profit (501(c)(3)) organizations are businesses, and must demonstrate to their donors they are competent. They must prove they understand their market, can provide adequate services in a cost-effective manner, and work to become Sustainable. Public and private partnerships will become essential.

Non-profits are an essential part of the state’s safety net for its residents; they fill gaps in the government’s work by providing...
services that business and industry consider to be unprofitable from the standpoint of return on investment.

Most non-profits are funded by grants, government support and business and individual support. In 2006, there were nearly one million of these organizations, almost a 70 percent increase from 1996 (http://nsscadataweb.urban.org/PubApps/profile1.php?state=us). As the number of non-profit organizations increases, competition for donors also increases, threatening sustainability of individual organizations.

Non-profit organizations can protect themselves by creating a new way of doing business to assure sustainability. One option is to generate earned income to support its social purpose through the sale of products or services, which is the classic model of a For-Profit business.

According to David Rendall, Assistant Professor of Business/Management at Mount Olive College in Goldsboro, North Carolina:

1. organizations should combine service with business;
2. social enterprise should participate in the Experience Economy;
3. organizations should not take on business models that have been rejected by the private sector;
4. organizations should consider audiences that are willing to pay for the services provided;
5. organizations should start a social enterprise that can make money; then fund charitable pursuits.

Human Capital

Nebraska's future depends on its human capital. Entrepreneurs of tomorrow won't be like the entrepreneurs of the past; they will be Millenials; baby boomers in a re-defined capacity; and immigrants. Each group has its own attributes and needs.

Millenials

Millenials are now 10-27 years old; this is an age group that will be crucial in the next decade. In that time, half of all certified teachers plan to retire, as do the majority of federal workers. Millenials may not have much capital, but they generally have superior technology skills, and many may have learned to be entrepreneurs, either through formal training or through starting their own businesses, according to Rick Telberg, editor-at-large for the newsletter of the American Institute of Certified Public Accountants.

Young people must be involved in decisions affecting future planning. Not only will they introduce their own interests and learn about the global economy, but they will gain a sense of responsibility and excitement about the state and its future. Studies show that leaving children out of the future planning equation has led to the development of many "people-unfriendly" places. Additionally, young people have information on what is wrong and right in their communities (www.activelivingresources.org).

Baby Boomers

Baby boomers were born in the years following the end of World War II and are retiring in great numbers. Sixty percent of workers employed with the federal government indicate they are on the edge of retirement, and many industrial and civic leaders are approaching retirement (Connecting Generations: The Sourcebook by Claire Raines).

These baby boomers will bring about widespread change in the future. Many have worked in corporate environments, and through retirement or displacement, they will continue to work with skills honed from their previous careers. They may turn their hobbies into businesses; they may apply business skills to humanitarian projects.

Baby boomers may have money, but may not have pensions; they have skills, but may be weak in new technologies; they want to continue to work; they have a vast network of contacts; and they know traditional ways of doing business (Rick Telberg, editor-at-large for the newsletter of the American Institute of Certified Public Accountants).

Immigrants

Immigrants have contacts in foreign countries; they know other languages and cultures; they experience difficulties with English and American culture; they have an exceptional urge to succeed; they have little capital, but do have a drive to earn money (Rick Telberg, editor-at-large for the newsletter of the American Institute of Certified Public Accountants).

Immigrants have contacts in foreign countries; they know other languages and cultures; they experience difficulties with English and American culture; they have an exceptional urge to succeed; they have little capital, but do have a drive to earn money (Rick Telberg, editor-at-large for the newsletter of the American Institute of Certified Public Accountants).

Conclusions

Nebraska can't be all things to all people, nor can it implement all the projects or wishes of the residents all at once. We can, however, prioritize projects in a fair manner and, in time, create synergy in the state. For more information visit www.unl.edu/sdn/economy

Top Ten Trends in 2008

Jack Schultz, founder of the Boomtown Institute (www.boomtowninstitute.com), wrote “Top Ten Trends in 2008” after traveling to more than 300 towns in 44 states to assess trends. His assessments:

1. Millenials – this generation, now ages 10-27, dwarfs the Baby Boomers in size. These young people are going to be the most entrepreneurial in the history of the USA. You need to be recruiting and retaining the Millenials.

2. Retirement as Strategy – The oldest Baby Boomer turned 60 in 2006. Several communities are actively recruiting young retirees to them. These young retirees aren’t going to be passive, they are going to be starting new businesses, volunteering and transforming the communities that are able to attract them.

3. Education – The jobs of the 21st century are increasingly going to go to the well-educated. Towns that have world class primary and secondary schools are going to be the winners. Entrepreneurial education is going to increasingly be pushed down to kindergarten. Community colleges will be the key to the constant retraining of the work force due to the rapid changes taking place in our economy.

4. Promises – It started with Kemalazoo, Michigan, which promised to pay the college education for anyone who attended its grade and high schools. Newton, Iowa and El Dorado, Arkansas have followed. Huge driver of where the Gen Xers and Millenials are going to decide to raise their families. Employers will follow.

5. Water, Water, Water – You can’t have enough of it. Boomers are going to want to live on it, the west is starting to fight over it and those that have control of it will rule.

6. New Urbanization-Downtowns – are hot! Boomers and young professionals don’t want to have to drive for everything. The old, walkable neighborhood is back.

7. Enviropreneurs – Green is increasingly growing in importance. Many local entrepreneurs are investing everything to get in on the front edge of this trend.

8. Niche Ag Farmers – are increasingly diversifying to new niche products. Local food production is also driving this trend, as is the growing interest in all things organic.

9. Premiumization – it started with coffee but has been embraced in many other products like honey, chocolate, vodka, cheese, breweries and others.

10. Birds Beating Birdies – The fastest-growing spectator sport in the USA is bird watching. Geo-caching, biking, hiking and extreme water sports are also growing in importance. Golf will still be important for some, but won’t be as dominant as in the 90s.

“The Ten Commandments of Community Leadership”

by Maury Forman

1. Thou shalt create a vision for the future
2. Thou shalt develop a strategic plan
3. Thou shalt build a sustainable economy for the next generation
4. Thou shalt seek-public/private partnerships
5. Thou shalt invest in education and training
6. Thou shalt promote respect
7. Thou shalt demonstrate a high standard of ethical behavior
8. Thou shalt value history, art and culture
9. Thou shalt prepare for a global environment
10. Thou shalt develop future leaders
Federal Immigration Reform and the Future of the United States Workforce

By Jim Partington, Nebraska Restaurant Association

Immigration reform is a complex and very visible political issue confronting our political leadership today. It is an issue that has implications for national security, the economy, demographics of our future workforce, social security, health care and our sense of identity as Americans as we enter the 21st Century.

We have an interesting and somewhat confusing dichotomy in the United States with our attitudes toward economic growth and immigration. James Canton, in his book Future Shock, and other demographers raise alarms about the future of our workforce as our baby boom generation retires. The generation following is insufficient in numbers to replace them in key leadership and productivity positions. This will clearly affect our ability to remain competitive in the global economy.

Advanced technology and other productivity enhancements can compensate for the shortage of people to some extent, but we will be faced with severe labor shortages in two critical areas: elite leaders with advanced education, technical expertise, and an innovative and entrepreneurial spirit, and entry level unskilled labor.

Since other nations have a surplus of people able to meet these needs, the obvious solution to this dilemma is immigration. This does not appear to be the option favored by most American voters, however. The Center for Immigration Studies in Washington, D.C. conducted a survey on voter attitudes toward immigration prior to the last election. The findings clearly show that a significant majority of our citizens are opposed to opening the country to more immigrants. When it comes to dealing with the undocumented immigrants presently in the country, voters generally reject the extremes of mass deportation or legalization. Mass deportation is not feasible at any cost acceptable to most of the country. Counting them all legal status just to resolve the issue is equally unacceptable. We clearly need some standard against which we can sort those out who contribute to our society and economy, and arrange for reliable identification of their status, and the send the rest back to their countries of origin. Concurrent with this, we need to establish a process through which willing workers with available employment opportunities are able to enter the United States under controlled conditions for the duration of their employment.

Both of these initiatives are the responsibility of the federal government and not resolvable at the state level. The restaurant and foodservice industry is the largest private sector employer in the U.S. with 12.8 million employees; the largest private sector employer in the U.S. with 12.8 million employees; and one of the largest private sector employers of immigrant workers. The National Restaurant Association estimates the number of jobs in the industry to grow by 15 percent over the next 10 years, but the U.S. government estimates the labor force will grow only 10 percent. Even more troubling, the government estimates 1 to 24 million undocumented immigrants in the United States (the 16 to 24 age group, which makes up about half of our industry’s workforce, will not grow at all over the next decade). Right now, our immigration system does not meet the economy’s need for new workers. Of all 10 million green cards are available each year for service industry workers in America’s rapidly expanding workforce of 134 million people. What is the result? Up to one in 37 employees in Nebraska is undocumented, according to research by the respected Pew Hispanic Center. The Center estimates that in the nation as a whole, up to one in 20 employees is undocumented. This is a direct consequence to the fact that our broken immigration system fails to recognize the economic realities of America’s rapidly expanding labor market.

A rational immigration policy is essential to our industry’s continued growth. Immigrants not only make up a large portion of the restaurant industry’s workforce, but they also make significant contributions as consumers in our nation’s restaurants and as entrepreneurs, incorporating ethnic and cultural influences as they start up restaurants of their own. Yet, the recent federal laws shows Americans support fixing every aspect of the immigration problem. They want to strengthen the border and crack down on illegality. But they also favor a way for hardworking undocumented immigrants to earn citizenship and for the economy to legally get the workers it needs.

Comprehensive immigration reform enjoys widespread public support and is accomplished through bipartisan cooperation, creating an opportunity that must not be squandered. While reform is complex and requires hard work and compromise, it will bring benefits lasting for generations.

To succeed, comprehensive immigration reform must address four key concerns: it must strengthen our borders; it must ensure that our economy gets the workers it needs; there must be a simple, inexpensive and enforceable system to verify the legal status of potential hires; and it must provide undocumented employees with a way to earn legal status.

Such a reform would benefit our pocketbooks by ensuring that America’s expanding economy gets the workers it needs to sustain and grow our living standards. University of California research shows that immigration has led to higher wages among the native-born over the past quarter century, with high immigration areas recording the greatest gains.

Genuine immigration reform will also strengthen the rule of law. Reasonable and enforceable rules will end the culture of lawbreaking that disturbs law-abiding Americans. Respect for the law among employers and undocumented employees would be enhanced if the law standards - that Americans have won over generations - were applied to every employee in America, protecting the undocumented from exploitation.

Assimilation would be one of the biggest winners of comprehensive reform. Instead of living on society’s margins, connected to it by only a paycheck, these hardworking employees would have to learn English and be given the opportunities that enable them to join society’s mainstream as previous immigrants have done.

Other American values would benefit. Immigrant families, hundreds of thousands of whom include U.S. citizens, would no longer fear being broken apart. And the era of immigrants dying as a direct consequence to the fact that our broken immigration system fails to recognize the economic realities of America’s rapidly expanding labor market.

Strategic Discussions for Nebraska: The Current Picture and Prospects for the Future

By Christopher Decker, Ph.D., University of Nebraska–Omaha

Sources of Business Enterprise Growth in Nebraska: The Current Picture and Prospects for the Future

By Christopher Decker, Ph.D., University of Nebraska–Omaha

By any measure, the United States’ economy is currently experiencing substantial contraction. With home foreclosures on the rise, tightening credit markets, a troubled domestic auto market, and a general slowdown in consumer spending (which alone represents nearly 70 percent of the gross domestic product (GDP)), it seems clear that the nation’s economy has been in a recession and will likely not see any sustained recovery until late 2009. According to Viens and Pierson (2008), business closures are increasing as well, particularly for retail establishments and small businesses.

While it seems to be the case that the east and west coasts are the regions hardest hit by the current downturn, one might still wonder about the prospects for Nebraska and its ability to weather the current storm. While the state’s major metropolitan areas have a relatively diverse industrial composition and have not been as hard hit by the downturn in the housing market, there may be greater risk to Nebraska’s non-metropolitan communities. Historically, rural areas tend to be harder hit by recessions largely because their economies tend to be less diverse in nature. Therefore, on a nationwide basis, a downturn in one sector, such as manufacturing, can spell disaster for a rural area dependent upon manufacturing for its economic well-being. However, in Nebraska there may be some sources of economic strength during such a cycle. First, the state is heavily vested in agriculture. Food and land prices are still relatively high, as well as land values, and, as Da Rocha and Restuccia (2008) point out, employment trends tend to be counter-cyclical. Hence, Nebraska may be able to avoid dramatic a recession when compared to other states.

Beyond that, however, there may be other sources of economic strength during such a cycle that contribute significantly to both Nebraska’s metropolitan and non-metropolitan economies. These non-agriculture based sources of economic strength are the focus of this essay. The primary goal is to assess the degree of economic growth in Nebraska with focus on its non-metropolitan areas. There are a number of ways to measure economic growth regionally, some of which measure employment. See, e.g., Goss, Decker, Burkhart-Kriesel, Johnson, Thompson, Saenz, Schmitt, Neuz, and Jeutang (2004). Alternatively, some authors such as Gabe (2004) have focused on new business startups. In some respects this is a viable measure to consider both for short- and long-term analysis. Employment is an input to production and tends to be highly volatile. Businesses particularly the large and medium-sized enterprises, are somewhat less volatile. Therefore, data on business startups tend to depict an economic environment considerably more stable than employment data, yet at least on the part of those entrepreneurs starting a new business. This essay utilizes data on net business growth as the main measure of economic activity, employing data on new enterprises and establishments from the U.S. Census Bureau.

In the next section, a comparison of new business growth in Nebraska relative to its neighboring states, as well as to the United States as a whole, is undertaken. Key industrial sectors in the state are identified. Then, these industrial sectors as analyzed within nine separate regions within the state to identify potential sources of both metropolitan and non-metropolitan business growth. Prospects for future short- and long-term growth are then addressed and finally, the essay concludes.

Nebraska, the Region and the Nation

In the 2000 Census, Nebraska, like other states, was divided into nine regions, as defined by the U.S. Census Bureau.1 These non-agriculture based sectors are the focus of this essay. The analysis is conducted at the state level and at the nine regional levels. The state’s metropolitan and non-metropolitan economies are considered in this study. Nebraska’s primary bordering states: Colorado, Kansas, Iowa, South Dakota, and Wyoming.

For Nebraska, the increase was 13.40 percent for the period. For the nation it was 3.30 percent. Another major source of business growth for Nebraska has been in the number of firms in the Information sector. This sector is comprised of firms involved with the creation and dissemination of information and cultural products such as books, software, and other electronic media. It employs a highly educated workforce, including authors, editors, software engineers and the like, many of which have high paying positions. Nationwide, growth in such businesses registered a 10.06 percent increase. In Nebraska’s neighboring region, the growth was slightly higher, 11.02 percent. However, the pace of business growth in Nebraska was substantially greater than both its neighboring states and the nation as a whole. Between 2000 and 2005, the number of businesses engaged in information activities increased 19.9 percent.

The Real Estate sector includes enterprises primarily engaged in selling, renting, and/or leasing stationary properties such as homes and commercial establishments. Perhaps due to increased home foreclosures on the rise, tightening credit markets, a troubled domestic auto market, and a general slowdown in consumer spending, the Real Estate sector increased 19.66 percent in number. While this outpaced the Nebraska neighboring region which witnessed a 16.57 percent increase in businesses, the number of business enterprises in Nebraska increased by 24.20 percent. Clearly, the state experienced substantial gains in this sector in the first part of this decade.

In recent years, Nebraska has also experienced substantial increases in businesses that engage in professional and technical services. These enterprises are in essence consulting services firms. They specialize in performing professional, scientific, and technical activities such as accounting, engineering and specialized architectural design, computer services, and legal advice for other firms. By their very nature, these firms tend to employ highly educated professionals from a variety of vocations. The number of such businesses in this sector increased 12.84 percent nationally between 2000 and 2005. However, in Nebraska, the increase was 14.85 percent, only slightly slower than the 15.32 percent increase posted in the state’s neighboring region.

The sector ‘Management of Companies and Enterprises’ is essentially companies that hold and manage securities and other equity interests for other firms. Here, too, Nebraska has well outpaced its neighboring region and the nation in terms of business growth rates. Between 2000 and 2005, while the number of these establishments nationally increased just under three percent, in Nebraska a 17.06 percent increase was recorded.

The final sector where Nebraska appears to be out-flanking the nation and its neighboring region is in the Health Care Services sector. In the neighboring region and the nation, the number of health services firms increased 13.33 percent and 15.03 percent, respectively, between 2000 and 2005. In Nebraska, the number of enterprises in the health services sector increased 14.50 percent.

Due to increased globalization, free-trade agreements, and the transition to more service-oriented business activity, manufacturing is a sector of the nation’s economy that has been experiencing contraction over the last thirty years. Many have lamented this sectoral shift away from manufacturing as many of the associated jobs are relatively high-paying positions that generated a substantial amount of economic activity. That said, Nebraska appears to be effectively attracting new manufacturing business to the state. While both the nation and the neighboring region experienced a 14.34 percent increase in businesses between 2000 and 2005 Nebraska posted a 1.06 percent increase in manufacturing.

Non-metropolitan Nebraska
A natural question to ask at this point is: where are most of these new enterprises located within Nebraska? Nearly 50 percent of the state’s population is located in its two largest cities – Omaha and Lincoln. The remainder of the state can largely be characterized primarily by Omahas and Lincoln. The remaining concentration of residents might suggest that most of the new businesses are being established in the Omaha and Lincoln area. However, upon further investigation, it appears that this is not the case in every instance. In some cases, enterprise growth is much more rapid in less densely populated areas of the state.

To investigate this further, the state is subdivided into nine regions, following the designations delineated in a study developed by the University of Nebraska’s Rural Initiative by Goss, et al. (2006). Of the nine regions, two are metropolitan areas, primarily by Omaha and Lincoln. The remaining seven regions are non-metropolitan. These regions were defined based on clusters of smaller cities (and adjacent non-metropolitan areas). However, none of the clusters highlighted above, except possibly for the health services industry which is more concentrated in metropolitan areas, are influenced more by demographic changes than economic ones, are current to the regional economies of Nebraska. The gains made between 2000 and 2005 can be sustained in the future.

Prospects for the Future
The current evidence does suggest some positive economic conditions for the state of Nebraska and its associated non-metropolitan regions. However, it is important to address how the gains made between 2000 and 2005 can be sustained in the future. This is particularly important to consider given the current state of the national economy. According to the Bureau of Economic Analysis, the United States’ economy slipped into recession in December of 2007, driven mostly by substantial declines in the nation’s housing sector. At the time of this writing, the current economic downturn will probably be of one of the most significant in history, both in terms of duration and magnitude. Looking forward, what are the prospects for Nebraska given both the current national economic climate as well as the source of business growth the state experienced between 2000 and 2005?

A potential benefit of Nebraska’s economy, particularly in its metropolitan regions, is that it tends to be more diversified in sector composition than in many other states. For instance, states such as Ohio and Michigan have economies that are heavily concentrated in manufacturing sectors – in particular, the automobile industry. Manufacturing sectors tend to be highly cyclical in nature. They enjoy substantial gains in business activity during economic expansions but also experience substantial job losses and business closings during economic contractions.

As discussed above, the sources of business growth over the period 2000 to 2005 in Nebraska have come from a variety of different sectors. However, some of the sectors highlighted above, except possibly for the health services industry which are more concentrated in metropolitan areas, are influenced more by demographic changes than economic ones.

The gains made between 2000 and 2005 can be sustained in the future.
It is noteworthy that Nebraska has enjoyed increased business activity in the health services sector, a sector which is largely driven by demographic composition of a region and is, in effect, not susceptible to business cycles. Indeed, over the last two recessions, employment actually expanded in this sector by 2.9 percent. Since most of the new business growth was concentrated in Region 1 of the state, this tends to bode well for the city of Omaha and its ability to weather the current economic storm better than other comparably-sized cities elsewhere in the nation.

Key Sources of Growth

Focusing particular attention on Nebraska’s non-metropolitan regions, it is worth pointing out that, while it is likely that the current national recession will adversely impact these economies, there is some hope that any contraction in business growth will be mitigated relative to other non-metropolitan regions in the nation. One key source of business growth in Nebraska has been the transportation and trucking sectors, where many regions experienced significant growth. In such businesses between 2000 and 2005. While this sector is not immune from recessionary slowdowns, the effect is muted, at least with respect to manufacturing sectors. Indeed, the average employment decline over the previous two recessions was a relatively modest 2.0 percent. Hence, for certain sectors of the non-metropolitan economy, a large cyclical downturn will likely be avoided.

From a longer term perspective, one might wonder about sustained growth in Nebraska and its non-metropolitan economies. For Nebraska’s metropolitan economies (Omaha and Lincoln), it is reasonable to anticipate that continued growth will arise from the information and health care services sectors. We live in an information and media-based economy. Demand for computer software, both for professional as well as entertainment purposes, shows little sign of abating any time in the near future. Moreover, computer technology will continue to advance as well, further increasing the need for information-based skill sets. Hence, the Information sector is, and will likely continue to be a major source of business growth nationwide.

While the general trend has been a declining non-metropolitan population as many residents seek opportunities in urban areas, there are nonetheless some potential sources of economic activity in non-metropolitan areas as well. 

While the general trend has been a declining non-metropolitan population as many residents seek opportunities in urban areas, there are nonetheless some potential sources of economic activity in non-metropolitan areas as well.

---

Christopher Decker, Ph.D.
University of Nebraska-Omaha

---

Conclusion

Given the rather bleak economic outlook for the United States’ economy, it is natural to conclude that as goes the nation, so goes Nebraska. However, while some economic contraction should be expected in the state and some concerns are quite justified, it is advisable to consider a few sources of possible short- and long-term growth for the state as well. As far as Nebraska’s metropolitan regions are concerned, there appears to be some positive prospects for continued growth in the health services sector of these economies. In non-metropolitan regions, sectors such as transportation and trucking are likely to continue to be a source of long-term growth in these economies. Despite economists’ best efforts, the ability to accurately predict the future path of any economy has proven quite elusive. How things will ultimately play out is anyone’s guess. This essay has highlighted some potential bright spots that are worthy of attention.

Eight years ago, on my first business trip to Omaha, I found myself driving west on Dodge Street searching for an address in the Old Mill neighborhood. My directions were poor, so I stopped for a cup of coffee at Westroads Mall and asked directions beyond I-680 to the West of the shopping center. The pleasant clerk in her mid-50s frowned and said, “I’m sorry, but I don’t go any farther than here.” I was speechless, but she explained that she lived in North Omaha and she simply didn’t travel any further “out there.”

To me – a native of New York, married to a remarkable native Nebraskan, who is still grieving over 9/11 and is the victim of more than 100K annual air miles - I didn’t know what to think. It reminded me how we create our own limitations; indeed, that the limits of our beliefs are the boundaries of our world.

After a year of regular travel back and forth, we decided to move to Omaha from New York. It is our home by choice, rich with friends and experience, flush with the gifts of the city’s arts, entertainment and culture and alive with connection. In Irony’s darkness, after five years of daily celebrating our choice to move to Nebraska, my wife died unexpectedly last year. But I decided to stay. This is now my home.

While I daily celebrate our decision to move to the Center, which is how I think of our state, I lament that our small, spirited collections of communities and interests aren’t better aligned. And that we don’t celebrate enough the gifts that surround us. As a New Yorker, I was starved for horizons. Here we are rich in breathtaking landscapes, surprising beauty and simple treasures, sunsets to rival anywhere we’ve lived, from Los Angeles, Florida, Denver, and Manhattan. We don’t have mountains or oceans, but we have people who embody the very spirit of enterprise: plucky souls who settled into hardscrabble lives to create, build, bond and believe that this state was a home worth making.

Nebraskans care for one another in the aftermath of a tragic mall shooting, or in the generosity of gifts of time and talent to anyone in need. We show up. School concerts, football games and even author signings at local bookstores always are sold out. We take care of our homes and we protect our neighborhoods. People count.

But in my second sad irony I feel compelled to suggest that as a state we suffer a deficit of connection. I spend time in Lincoln, too, and in some of the “Out State” towns of my friends and in laws. At times it feels as if we are trying to align three disparate mini-states: the “big, bad” Omaha (I still think of the city as a big town), Lincoln, a city of civil servants, students, professors and college workers; and the huge open space of The Rest. The only time I think we feel like a single state is during Husker football games when 85,000 of us fill Memorial Stadium in shared support of a team on the way back.

It has been suggested that the widest gulfs are between our cities to the East, and the rest of the state. One barrier to the sense that we are One State may be how we share the revenues that fuel government services, schools and essential infrastructure. Omaha makes up more than half of Nebraska’s GDP, and more than 80 percent of our state’s cities, towns and counties count on shared revenue to meet their budgets. This sets up an awkward taffy pull for resources, attention and priorities. Small towns resent the “big, bad” revenue generators, and urbanites often feel cheated. Absent a common framework to set sensible tax policy and create a compelling invitation to capture new enterprises for our state, along with growing existing businesses, Nebraska’s economic development engine runs at half-speed.

If we are to prevail during this time of profound erosion in our economy, we can’t wait long to learn to surf on the shifting tectonic plates of eroding markets and uneven spending. It’s time to surface and exploit our best values and instincts to challenge this painful mythology of “three” states, perhaps in time to discover the historic gifts and well-honed experience we bring to reinvention and renewal. In America, we now suffer because greed took trust hostage. In that same spirit, we will severely diminish our state’s potential – in ideas, resources, in the chance of attracting and keeping our best young people – if we don’t suspend the limitations of a shorthand about our small state’s “three mini-states.” We need to link and leverage our best thinking, our proven capacity to deliver on our promises; our history of fiscal conservatism (which can fuel big ideas); and the spirit of a pioneer people to compete economically in a complex global world.

At times the Omaha-Lincoln I-80 corridor feels like a broken trail between two combative neighbors, one committed to being “more than,” while the other persists in feeling “less than.” And folks to the west feel both ways about the two of “them.” How sad for all of us.

It isn’t easy to grow our local businesses, create lasting work and attract smart new players. We aren’t an inexpensive state. My former neighbors in Manhattan are surprised by the hefty property taxes and the average cost of living, because national ignorance of those of us in The Middle is profound. I still have London clients who ask, “how is it in Oklahoma?”

Isn’t it time to take a new look at economic development and the state of our state?

Beautiful Nebraska, peaceful prairieland,
Laced with many rivers, and the hills of sand;
Dark green valleys cradled in the earth,
Rain and sunshine bring abundant birth.

Beautiful Nebraska, as you look around,
You will find a rainbow reaching to the ground;
All these wonders by the Master’s hand,
Beautiful Nebraska land.

We are so proud of this state where we live,
There is no place that has so much to give.

Beautiful Nebraska, as you look around,
You will find a rainbow reaching to the ground;
All these wonders by the Master’s hand,
Beautiful Nebraska land.

Jim Fras was a refugee from Russia who moved to Lincoln in 1952. In 1960, Fras and Guy Miller wrote the words to Beautiful Nebraska. Fras set the words to music. On June 21, 1967, the Nebraska Legislature approved legislation adopting Beautiful Nebraska as the official state song.
