Vol. 13, No. 2, August 1979

FROM THE DIRECTOR'S DESK

## Update on Patents in the University

You have been aware of the discussions which have been taking place during the past year concerning patents in the University. Dr. Steven Sample, Vice President of Academic Affairs, has been working with a University Committee and Mr. Vincent Carney, a Lincoln patent attorney, toward the preparation of a Handbook of University Patent Procedures. Vice Chancellor Massengale asked me to represent IANR on this committee. An IANR ad hoc Advisory Committee on Patents and Copyrights, chaired by Dr. Will Schutz, was appointed by Vice Chancellor Massengale in 1978; this committee reviewed early drafts of the handbook and made a number of suggestions.

The University committee completed the Handbook in April. At the May meeting of the Board of Regents three policies taken from the Handbook were approved to better implement the Patent policy outlined in Section 3.10 of the Bylaws of the Board of Regents. These policies (1) establish an office of Patent Administrator for the University; (2) call for a division of royalties from patents on the basis of one third to the inventor, the patent administrator, and the department or other appropriate unit, respectively; (3) establish procedures for the accepting or rejecting offers of inventions by the Board of Regents under section 3.10 of the Bylaws.

Dr. Trani has been designated by Vice President Sample as University Patent Administrator. The Handbook will be reproduced and distributed to all departments and similar administrative units. It will answer most questions which one might have on patenting procedures. Vice Chancellor Massengale has asked me to serve as patent officer for the Institute. As such I will be the contact point in the Institute for patent matters, and will maintain close liaison with the University patent administrator.

I believe that all of the above reflects a positive attitude in the University including administrative and Regental levels to patents; the new procedures will speed up the patenting process, and eliminate some of the frustrations we have all had in the past with the old procedures. Establishing a patent administrator fixes responsibility for making the system work, and enables the development of competence to handle the many technical details which characterize the patent process.

Incidentally the Institute staff has been relatively active in submitting patent proposals; seven of the twelve active patent applications now being handled by the Patent Administrator's office originated in the Institute.

Patent proposals should be submitted through the usual administrative channels, namely unit administrators, the appropriate Division, and the Vice Chancellor's office.

If you have any questions about the patent process, I shall be glad to try to answer them.

Howard W. Ottoson
