This Article is brought to you for free and open access by the Nebraska Academy of Sciences at DigitalCommons@University of Nebraska - Lincoln. It has been accepted for inclusion in Transactions of the Nebraska Academy of Sciences and Affiliated Societies by an authorized administrator of DigitalCommons@University of Nebraska - Lincoln.
Contents

Nebraska Academy of Science, officers ........................................ 1
Instructions to contributors .................................................. 2

Behavioral Sciences

Clovis projectile point occurrences in northwestern Nebraska. LARRY D. AGENBROAD ........................................ 5
Early influences in American Indian linguistics. SHARON E. CLARK .................................................. 8
Ethnoscience as a methodology in Indian education: a Sioux and Apache example. ELIZABETH S. GROBSMITH ....................... 14
Values and goals: Nebraska Reservation Indians. VIOLET KALYAN-MASIH .................................................. 24
Cognitive egocentricity of the child within Piagetian developmental theory. VIOLET KALYAN-MASIH ....................... 35
The concept of caste: cross-cultural applications. BRUCE LABRACK .................................................. 48

Earth Sciences

A paleo-indian Bison kill in the panhandle of Nebraska. LARRY D. AGENBROAD ........................................ 57
Preliminary analysis of the Bison bones from the Hudson-Meng site, Sioux County, Nebraska. DALE S. HOFFMAN, WAYNE L. FARRENS, and DARYL L. MCDONALD .......................... 62
Notes regarding skull characteristics of Oxetocyon cuspidatus Green (Mammalia, Canidae). LLOYD G. TANNER ........................................ 66

Engineering and Applied Sciences

Eutrophication of small reservoirs in eastern Nebraska. MARK J. HAMMER AND GARY L. HERGENRADER ........................................ 70
A modified transhipment algorithm for trucking. HAROLD JAMES JOHNSON .................................................. 81

History and Philosophy of Science

The case for probabilistic grammars. H. L. BERGHEI ........................................ 90
Attempted resolutions of the “Allais” Paradox. EDWARD D. BOOTH ........................................ 94
Adams: on reduction of rigid body mechanics to particle mechanics. MICHAEL A. DAY ........................................ 105
Niches of Nebraska Scientists. Charles Edwin Bessey. HAROLD G. HOLCH .................................................. 111
Every social system is an automaton. ECKEHART KOHLER .................................................. 118
Sir James Paget's contribution to cancer genetics. ANNE J. KRUSH .............................................. 123
The normative incompleteness of social theories. WERNER LEIN-FELLNER ........................................ 128

LIFE SCIENCES
Comparative primary productivity of two flood control reservoirs in the Salt Valley watershed of eastern Nebraska. JOHN L. ANDERSEN and GARY L. HERGENRADER .................................................. 134
Nitrate and phosphate content of ground and surface waters of the White River Drainage, northwest Nebraska. CHARLES E. BAKER .................................................. 144
Quantitative analysis of swine chromosomes (Mammalia: Suuidae). J. M. RARY and R. L. MURPHREE .................................................. 152
Physical fitness status in an urban police force. KENNETH D. ROSE, ROBERT J. ROBERTSON, and FORD M. ROYER .................................................. 163
Water quality and bioassay study from Crawford National Fish Hatchery. JERRY E. TAYLOR .................................................. 176
A study of ecotypes in *Vernonia gigantea gigantea* (Compositae). LOWELL E. URBATSCH .................................................. 182
A floristic study of Dawes County, Nebraska. LOWELL E. URBATSCH and ROBERT EDDY .................................................. 190

MATHEMATICS AND COMPUTER SCIENCE
BIOSTAT, a computer program providing simple statistics for biological sciences. J. M. HILLERUD .................................................. 205
Analytic continuation by means of the L(r,t)-summability transform. STANLEY D. LUKE .................................................. 217

PHYSICAL SCIENCES
The Dirac relation, Einstein coefficients, and the Blackbody spectrum. D. W. SCHLITT .................................................. 225

SCIENCE TEACHING
The Nebraska–South Dakota high school mathematics contest. HENRY MIOT COX .................................................. 229
The role of the professional geographer in geographic learning. SALVATORE J. NATOLI .................................................. 237

In 1969, the eightieth session of the State Legislature of Nebraska passed LB776 appropriating funds to aid in the publication of the Transactions. Volume 2 was published using part of those monies as well as funds from Academy dues.
NEBRASKA ACADEMY OF SCIENCE, INC.

Officers

President:
1972-73  Dwight D. Miller, University of Nebraska-Lincoln
1973-74  Larrie Stone, Dakota College

Executive Secretary:
C. B. Schultz, University of Nebraska-Lincoln

Treasurer:
Carroll L. Moore, Nebraska Wesleyan University

Corresponding Secretary:
K. Fred Curtis, State Department Education

Councillors:
1970-73  Nicholas Dietz, Jr., Creighton University, Omaha
1971-74  Paul H. Laursen, Nebraska Wesleyan University
1972-75  C. Robert Keppel, University of Nebraska-Omaha

Collegiate Academy:
Walter R. French, Jr., Nebraska Wesleyan University
Marvin Bichel, Nebraska Wesleyan University

Junior Academy:
Paul B. Ackerson, University of Nebraska-Omaha

Science Teaching:
Sister Rita Gaul, University of Nebraska-Omaha
Dale D. Rathe, Lincoln Public Schools

AAAS Representative:
James A. Rutledge, University of Nebraska-Lincoln

Program Chairman:
Albert W. Zechmann, University of Nebraska-Lincoln

Editor:
John D. Lynch, University of Nebraska-Lincoln
INSTRUCTIONS TO CONTRIBUTORS

ELIGIBILITY

Any member of good standing of the Academy is eligible to submit manuscripts for consideration of publication in the Transactions. Papers need not have been read before an Academy meeting.

Manuscripts should be typed on non-erasable bond paper (8½ x 11 in.). Each page should be numbered and bear a one inch margin. The entire manuscript, including the Literature Cited, page of Legends for figures, affiliation of author, and abstract must be double-spaced. Two copies of each manuscript must be provided. A second copy of each illustration is required (the copy may be a xerox copy).

All manuscripts are reviewed for style, appropriateness, and originality by the editor and one or two competent referees. Acceptance of manuscripts is the sole responsibility of the editor.

Manuscripts of original research or interpretation are appropriate. Under special circumstances, review articles or material published previously will be considered for publication. Prospective authors are urged to carefully read the instructions on manuscript preparation.

PREPARATION OF MANUSCRIPTS

A manuscript should consist of most of the following (in sequence): Title; author; affiliation and present address (if different); abstract; body of text; literature cited; tables; legends for figures; figures (numbered and mounted on stiff cardboard or matting board). Further comments on some of these items are listed below.

ABSTRACT

The abstract should provide the reader with a concise statement of what the paper concerns but should not be a second summary. All manuscripts of 5 or more type-written pages should be accompanied by an abstract of no more than 3 percent the length of the text.

TEXT

Examine the papers in this issue. Follow the format appearing in most. As examples see Agenbroad (pages 5, 57), Hammer and Hergenrader (page 70), or Rose, Robertson, and Royer (page 163). When referring to the work of another author use the following format if the paper is listed in the literature cited — Hoffman (1972:20). For short manuscripts, the literature cited section is best deleted and the reference in the text would read: Hoffman
(1972, Trans. Nebraska Acad. Sci., 1:20-34). Avoid giving the title or some wordy prelude to a literature reference in the text. When calling attention to an illustration or table included in the paper, refer to these as follows: “The study site is located in eastern Nebraska near the confluence of the Platte and Missouri Rivers (Fig. 1).” Avoid something such as “Figure 1 is a map of the study area . . .”

FOOTNOTES

Although popular in term paper preparation most footnotes represent extraneous comments or afterthoughts and rarely add to the paper. In most circumstances, a little planning permits incorporation of footnotes into the text or their deletion. Avoid using them – they are expensive.

LITERATURE CITED

Only those references mentioned in the text need or should be included. The references should be listed alphabetically by author and chronologically by author (if more than one paper by a single author is cited). Do not refer to numbered references! The typed reference should be in the following form:

TABLES

Tables are expensive to print. Their use should be judicious. Do not duplicate text material in tables. Ask yourself – “How necessary is this table? Can it be incorporated into the text?” If you must put material in tabular form, give some thought to the space available. There are 74 characters in a line of the Transactions (set in 10 point type). Smaller type size will permit wider tables.

LEGENDS

List all legends for figures, in order, on a typed page. Do not type the legends on the figure!

ILLUSTRATIONS

The diversity of quality, necessity, and degree of planning of figures does not make the editor’s job easier. Line drawings (black ink on white drawing paper – not typing paper) or photographs are appropriate for illustrations.

Illustrations done in pencil, ball-point pen, blue ink or pencil, or typewriter will not be accepted. If redone, the costs will be charged the author. Poor-quality illustrations do not improve with reduction – make sure
the drawing is neat or the photograph is in focus. The space available for a single illustration (or group of illustrations) is only $4\frac{3}{4} \times 6\frac{1}{4}$ inches. Plan your illustrations for the narrowest measurement. Mount each on a piece of cardboard or heavy poster board and label with your name, the figure number, and title of your paper.

Do not mix half-tones and line drawings in the same illustration or group.

The present volume contains good to excellent illustrations as well as very poor quality illustrations. The editor will delete illustrations if they are of poor quality unless they are too completely integrated into the manuscript. In that case the manuscript may be rejected. A little planning can save both of us difficulties. Always ask yourself — “Is this illustration necessary? What will it be like if the editor reduces it to $\frac{1}{2}$ present size?”

When you are satisfied with your manuscript, have a colleague read it for clarity and appropriateness. Completed manuscripts may be sent to the Academy Office or directly to the editor.

**REPRINTS**

Reprints may be ordered when galley proof is sent to authors. Purchase of reprints is from the printer, not the Academy.

**EDITOR’S CORNER**

The editor’s role is often difficult and thankless and that of reviewers and referees even more so. I here gratefully acknowledge my colleagues for serving as referees for the manuscripts submitted for volume 2. Those who preferred anonymity have my personal thanks. Greg Anderson (UNL), Gilbert Adrian (Hastings College), Peter Bleed (UNL), Brian Blouet (UNL), Warren Caldwell (UNL), James Gibson (UNL), Harvey Gunderson (UNL), Mark Hammer (UNL), Gary Hergenrader (UNL), Donald Jensen (UNL), Gerald Johnson (UNL), Blake Keasey (UNL), Werner Leinfellner (UNL), Larry Martin (Univ. Kansas), Dwight Miller (UNL), Hubert Schneider (UNL), John Scholz (UNL), C. B. Schultz (UNL), William Splinter (UNL), Larry R. Stucki (UNL), Don Sutherland (UNO), Lloyd Tanner (UNL), Gerald Tharp (UNL), Melvin Thorton (UNL), and Edward Zimmerman (UNL).
