This Article is brought to you for free and open access by the Textile Society of America at DigitalCommons@University of Nebraska - Lincoln. It has been accepted for inclusion in Textile Society of America Symposium Proceedings by an authorized administrator of DigitalCommons@University of Nebraska - Lincoln.
My name is Elaine Lipson. I’m a lifelong artist and maker, and professionally I’m a writer, editor, and author. I’ve edited some books you may know, including Art Cloth by Jane Dunnewold and The Encaustic Studio by Daniella Woolf. I’m the author of The Organic Foods Sourcebook, a 2008 market research report called The International Market for Sustainable and Green Apparel, articles for Ms. magazine, Yoga Journal, Surface Design Journal, Hand/Eye, and many more, and a somewhat neglected blog.

Thank you to the Textile Society for having me here today. I urge you to participate in TSA and take advantage of all its opportunities for education. Last year I was able to attend the ISEND natural dye conference in France with partial funding through TSA, so apply for those grants that it offers and you might have an adventure as wonderful as mine was.

I’m here today to talk about Slow Cloth, an approach to working with textiles that I hope will inspire you and help to inform your work in new ways, and that demonstrates how our work with textiles connects us to our inner and outer worlds with meaning and power.
Slow Cloth is a concept I started thinking about and writing about in 2007, when I was working in the organic foods industry. I’d spent many years working alongside food activists and growers and entrepreneurs and agencies of change, including Slow Food, the now-legendary brainchild and heart-child of Carlo Petrini in Italy.

Every time I thought about Slow Food, with its principles of cultural preservation, artisan excellence, regional character, community, conservation, and pleasure, I wondered why the concept couldn’t be applied to textiles, for both entrepreneurs and individuals. So I began to write about the idea.

At that time, it just didn’t make sense to anyone; the whole Slow movement hadn’t quite mushroomed yet. I got a lot of blank looks, a lot of “so-what” looks, and some humoring remarks for my little idea. Now that seems kind of funny, because Slow is the new Green, thanks to people like Carl Honoré who have publicized a broader Slow movement – there’s slow everything, and many people have adopted a slow framework for textiles. The concept doesn’t seem so strange any more and has an intuitive resonance for many of us.

But right from the start, someone asked me if I had a manifesto for Slow Cloth, and I wrote up a set of principles and qualities that I think make it not only original but also unique among these Slow models. So I’m going to talk about those qualities, and about how they are both sustainable and political, since that is our theme.

Meanwhile, I have some slides that include my work, some world textiles, and some works from people who have been or are now in my Facebook Slow Cloth community. These works and their makers are just a few ways of expressing the Slow Cloth ethic.
**Slow Cloth**

**Process**
- Appropriate time
- Skill and mastery
- Ethic of quality

**Culture**
- Diversity and multiculturalism
- Fostering community
- A commitment to teaching

**Soul**
- Joy
- Contemplation
- Beauty
- Expression

**Materials**
- Sustainable use of resources
- Appropriate materials
- Pleasure

My concept of slow cloth has four dimensions, exploring how we work, what we work with, why and where we do it in relation to others and in relation to ourselves. The first of these, the how, is process. There’s an inclination to define Slow Cloth very literally – that it’s simply something that takes a long time to make. The funny thing is that Slow Food originally wasn’t a reference to time, but the Slow movement has naturally evolved to incorporate time, partly in response to our accelerated world. And time can most definitely be one aspect of Slow Cloth. I like to think of it as taking an appropriate amount of time to make a textile, or a human amount of time, rather than the time needed to fill an arbitrary or profit-minded mass production quota.

There’s another way to look at time as it relates to Slow Cloth, and that is that we can choose to take time to master skills. This for me is where Slow Cloth departs from the mainstream crafty trend. The war in my brain is not art vs. craft; it’s quality along the art-craft spectrum vs. what I call craftiness. Slow Cloth aims for the mastery, fluency and depth that can only come from cultivating a relationship to making, and to textiles, over a lifetime, not jumping from one crafty workshop to the next that aim primarily to sell you a lot of supplies. To make objects of quality, to explore a method in depth, to master skills, these are the elements of process that are inherent in a Slow Cloth ethic and aesthetic. It doesn’t mean that you don’t explore new methods and ideas, but that there is a discipline to your process and a movement toward excellence.

Now, if you look at the search terms that bring people to my writing, a lot of them want to know “how to make a Slow Cloth.” They want a tangible and specific technique, not a concept, and they generally think it’s hand stitching. That’s far too limiting, in my opinion, and I created an inclusive definition that allows for any way of working with textiles, from stitching to garment construction to quilting, weaving, knitting, dyeing, collecting, designing, beading, researching, or even just wearing and using.

The next dimension of Slow Cloth is material, and many people connect the slow concept to using only what we have come to call sustainable fibers. And it’s true that the notion of sustainable use of resources and ecologically appropriate materials is a cornerstone element of Slow Cloth. The most familiar of
these are organic fibers, recycled fabrics, and natural dyes, each of which has its own complex resource issues. But we can say that the awareness of the concerns related to sustainability in textiles is growing and that’s a positive and important movement.

I do believe, however, that if you’re making something with a Slow Cloth ethic, it’s probably an ecologically sound activity that adds more to your life and to the planet than it takes away. We want to push fiber production to be more environmentally and socially responsible, but we don’t yet have full availability of these materials. Use the full spectrum of what’s available to you and support changes in the industry. There are many fabrics and fibers, including synthetics, that make sense in the context of design and usage. There is also great value in supporting domestic and local textile production if that’s appropriate to your region.

When we talk about a slow cloth movement, many people stop there, with process and materials. I invite you to consider two more dimensions that make Slow Cloth a more powerful idea and add more meaning to our making.

Slow Cloth has a cultural dimension. We’ve had a long period of losing skills and losing touch with traditional textile techniques, and of losing our connection to the history and significance of those techniques. Textiles have been a form of art, communication, survival, seduction, spirituality, expression, community, and enterprise throughout history for all of humankind on planet Earth and beyond. There is always a textile story to a place or an event. Even Neil Armstrong went to the moon in a spacesuit with a hand-stitched bodysuit underneath the fabrics that kept him alive in space. (I learned that from the Smithsonian magazine’s Threaded blog).
Just as Slow Food sought to protect and re-educate people about regional food tastes, we as Slow Cloth advocates and artisans have an opportunity to celebrate, and a responsibility to appreciate, the stories of textiles and those who make them around the globe.

The collective and cultural aspect of Slow Cloth includes the idea of teaching. Many of us learned from a parent or grandparent, but again, we have a big gap, a couple of generations of people where that natural passing on of information and knowledge has disappeared. Now we have the Internet and new ways of teaching and learning, and as we’ve seen time and time again, the high speed and rapid evolution of the Internet can give life to dying traditions in the connections that it offers. So Slow Cloth in its cultural dimension doesn’t reject technology; it enjoys it and takes full advantage of it as a means to teaching, learning, and connecting.
Finally, Slow Cloth has an emotional and even spiritual or soul dimension. That is the opportunity in working with textiles to experience joy, to create an island of contemplation, to express oneself, and to add beauty to the world. Now, as I say this I don’t want to sound too precious about it. Not every moment of making, especially when you’re in business, is all serene and blissful. But over time, over a lifetime, you find that there is, reliably, a way to access these experiences through textiles and textile-related skills.

So these are the dimensions and qualities, for me, of Slow Cloth. If you seek, recognize, honor and develop these qualities in your work, then textiles become a source of meaning, deep satisfaction, connection, and nourishment. Making things that take attention and care is not a waste of time; it’s reclaiming time. We can choose materials and methods for the pleasure of using them and for their appropriateness to our design, not for speed, efficiency, sameness, or short-lived trendiness.
We can connect to people all over the world, and indeed to every time in history, through the commonality and language of textiles. We can elect to use textiles in our lives that are well made and that may reveal the hand and character of the maker. We can take pride in working toward mastery, toward a relationship with our materials that’s graceful and rewarding. We can teach people how to make something – and I want to stress that this should be a gender-free activity, that textiles are just the right thing for many men just as working with iron or wood is captivating for many women.

All of this—the choice to make things in a conscientious and authentic way—becomes a political act and an optimistic vote for a sustainable world when you contrast it with a world where few people know how to make anything with their hands; where we are consumers but not creators; where our choices are
determined by a conflux of corporate interests that run big-box stores fueled by multinational manufacturing where the cheapest, most polluting, and most inhumane methods rule the day, making objects with chemicals and toxins that are beyond regulation and the human costs and consequences of them are ours to pay.

On perhaps a less dramatic level, it rejects the idea that even craft can be commoditized and cheapened for the marketplace. We see that even the resurging interest in craft, that people’s hunger to create and to work with their hands can be exploited by turning everything into a frantic industry where selling trends and promoting quick results with shoddy materials overrides creativity and quality, and where everything begin to look the same.
Make some or all of the qualities of Slow Cloth your reference point, and you regain power, control, and meaning over your relationship with textiles and your ability to learn, succeed, and share. Your work with textiles, fibers, and fabric becomes a source of connectivity and a companion. It becomes a rebellious and even radical vote for self-sufficiency, quality, and creativity in a mass-produced world. It’s good work.
I’ll close with a quote from Wendell Berry, a poet, farmer, and teacher who never needs a construct of Slow because he lives its essence, that a friend shared just the other day. It’s from his essay Conservation is Good Work:

“…The name of our proper connection to the earth is “good work,” for good work involves much giving of honor. It honors the source of its materials; it honors the place where it is done; it honors the art by which it is done; it honors the thing that it makes and the user of the made thing. Good work is always modestly scaled, for it cannot ignore either the nature of individual places or the differences between places, and it always involves a sort of religious humility, for not everything is known.”

Wendell Berry, Conservation is Good Work, 1992

"…The name of our proper connection to the earth is “good work,” for good work involves much giving of honor. It honors the source of its materials; it honors the place where it is done; it honors the art by which it is done; it honors the thing that it makes and the user of the made thing. Good work is always modestly scaled, for it cannot ignore either the nature of individual places or the differences between places, and it always involves a sort of religious humility, for not everything is known.”

Wendell Berry, Conservation is Good Work, 1992

So I wish you good work with textiles, work that takes just as long as it takes to make something beautiful, useful, skillful, and joyful, that connects you, via a stitch or a thread, with your soul, your community, and your planet. I hope the model of Slow Cloth inspires you and provokes new ideas and conversation.

Thank you!
