REPAIRS AND ADJUSTMENTS

The pin which holds the splined end of the steering rod in the splined universal joint sheared off twice, once during the limber-up run and again during the rated load drawbar test.

The cylinder-head-to-radiator hose connection was tightened at the beginning of the drawbar test.

REMARKS

1. All results shown on page 1 of this report were determined from observed data and without allowances, additions, or deductions. Tests B and F were made with carburetor set for 100% maximum belt horsepower and data from these tests were used in determining the horsepower to be developed in tests D and H, respectively. Tests C, D, E, G, and H were made with an operating setting of the carburetor (selected by the manufacturer) of 97.5% of maximum belt horsepower.
2. Observed maximum horsepower (tests F & B) Drawbar 14.84 Belt 17.44
3. Sea level (calculated) maximum horsepower Drawbar 15.36 Belt 18.21
(based on 60° F. and 29.92" Hg.)
4. Seventy-five per cent of calculated maximum Drawbar 11.52 Belt 15.48
drawbar horsepower and eighty-five per cent
of calculated maximum belt horsepower (form-
erly A.S.A.E. and S.A.E. ratings)

We, the undersigned, certify that the above is a true and correct report of official tractor test No. 297.
