Cooking in your skillet is fun and easy. It is a symbol of relaxed hospitality and a great help in serving buffet suppers or informal dinners for a few guests. Cooking at the table is popular because you become a part of the conversational group and do not need to miss any of the fun.

Attractive and nutritious food can be prepared in your automatic electric fry pan, in handsome chafing dishes or in a heavy skillet with a well-fitted lid. The newer ranges with thermostatically controlled heat are especially good for skillet cookery. The same temperatures as suggested for the electric fry pan are used on the range. Usually a medium or low heat gives best results.

Your skillet will do many kinds of cooking—frying, braising, stewing, heating of soups and even small-quantity baking. One dish-meals can be time and fuel savers. You can also warm up buns, toast sandwiches and pop corn. Electric skillets may be used wherever there is an available outlet. With built-in heat control and usually a cooking guide on or near the handle, the guess work is taken out of surface cooking.

How you wash your fry pan will depend on the control device. Follow directions carefully. Some skillets have sealed elements so they can be put under water. Some control handles can be removed. Skillets which cannot be immersed should be washed with warm water and mild soap; rinsed and dried. If the food should stick, soak the skillet with warm water, then clean with steel-wool soap pads.

Skillets come in a variety of shapes and sizes. Square ones sometimes use the cooking space to better advantage; round ones are a little easier to clean. Choose the size that most nearly meets your family's needs.
