## EDITORIAL BOARD

M.C. Thomas, Editor  
Ross H. Arnett, Jr.  
Virendra Gupta  
John B. Heppner  
Lionel L. Stange  
Robert E. Woodruff

INSECTA MUNDI (ISSN 0749-6737) is the quarterly journal of The Center for Insect Systematics. Short papers on broadly defined insect systematics are published, including descriptions of new taxa, informal taxonomic notes, bibliographies, checklists, catalogs, and reviews.

For papers about new insect species, INSECTA MUNDI provides authors **early publication** so that the species may be included in other books and catalogs.

Authors are fully responsible for the contents of their papers. All papers are reviewed by the Editorial Board and by individuals with special expertise. Acceptance by a majority of the Editorial Board is a requirement for publication.

Research notices and other noncommercial news is published at the discretion of the Editorial Board. New literature reviews are also published.

INSECTA MUNDI is distributed worldwide to entomology libraries and publishing taxonomists.

Announcements and advertisements are accepted; rates upon request.

## SUBSCRIPTIONS (four issues per year)

Individuals: \$25.00 per year

Libraries: \$50.00 per year

Payable in advance (in U.S. dollars) to:

E. J. BRILL/Flora & Fauna Publications

Postbus 9000

2300 PA Leiden, The Netherlands

## MANUSCRIPTS

Send unpublished manuscripts and queries to:

INSECTA MUNDI

E. J. BRILL/Flora & Fauna Publications

2406 N.W. 47th Terrace,

Gainesville, FL 32606 USA

(904) 371-9858

Notice of acceptance/rejection within two weeks. Include (U.S.) postage if you want your manuscript returned.

No page charges are made. However, authors are required to subscribe. Separates can be ordered upon acceptance, at Publisher's cost.

## INSTRUCTIONS TO AUTHORS

### General

1. All papers must adhere to The International Rules of Zoological Nomenclature.
2. Papers longer than 25 pages will be published in segments in two or more INSECTA MUNDI issues.

3. Papers may be in English, French, German, Italian, Portuguese, or Spanish. An English summary is required for non-English papers.

4. Publisher will design, typeset, and assemble text and artwork for publication.

### Content

5. Each new taxon must be illustrated and included in a new key, or as an addendum to an existing key. The only exceptions to this rule are:

A. the publication of a replacement name for a homonym,

B. for a new combination of a species or subspecies.

6. Type species of each genus must be stated, with the manner of designation and reference to the designation.

7. Start your paper with an **Abstract** defining your conclusion. Follow with an **Introduction** that describes the scope and purpose (not a summary) of your paper.

8. **Distribution** data may be summarized. For new taxa or comprehensive species studies, full data from labels may be given. Include the names of collections in which the specimens are deposited.

9. List references under **Literature Cited**; follow the format shown in this issue.

10. Footnotes are prohibited; use Text Notes at the end of your paper. Provide a separate sheet/file with captions and legends for photos, tables and artwork.

### Materials

11. **Text:** The Publisher uses MS-DOS personal computers to prepare each issue. When possible, supply your paper on (U.S.A.) MS-DOS 360K 5-1/4" diskettes and a (final) hardcopy printout.

Acceptable word-processor or ASCII formats for italic and foreign characters (â, ä, å, á, â, etc.) are explained in our (easy-to-use) **Instructions for Computer Generated Papers**. Ask for it.

Other formats and non-computer generated (typewritten) papers will be converted and charged to author at cost.

12. **Photos, Tables and Artwork:** Add numbers to front of plates, photos and artwork. Use scale lines. Add captions and legends to backside. Do not intermix photos and art on same plate. Photos extra: \$10 each. Color available at extra cost.

	Max.	Max.
Illustrations	Width	Depth
1 Column	3-1/8"	8-1/4"
2 Columns	6-3/4"	8-1/4"

(continued from back cover)

**Lepidopterorum Catalogus (New Series) Fascicle 118: Noctuidae of the World, Parts 1 - 3**, ca. 1300 pages in 3 parts (2 text parts, bibliography and index), by Dr. Robert W. Poole. Publication date not set, price not set (also available as subscription). Volume 1 / ISBN 0-916846-45-8; Volume 2 / ISBN 0-916846-46-6; Volume 3 / ISBN 0-916846-47-4.

This fascicle of the new series, *Lepidopterorum Catalogus*, covers about 40% of the entire order Lepidoptera, the large worldwide family Noctuidae. Numerous important pests and other well-known species are in the family, including armyworms, the corn earworm, the Egyptian cotton leafworm, the European cabbage worm, as well as the thousands of innocuous species. About 50,000 named species and synonyms are listed, including all names published up to 1985.

The text of over 1,000 pages lists all named taxa of Noctuidae (other than invalid infraspecific names) alphabetically by genus and species, with valid names in boldface. Synonyms are listed for each genus and species, and species synonyms are also listed alphabetically among the valid species names. Each generic name is also referred to its current subfamily placement, and a general index is also provided. Original literature citations are given for all names, as well as the citations noted in the text to papers showing illustrations of the species, those having biological data, larval data, and host data for nomenclatural reference; citations are given in full in the terminal bibliography. Details of generic nomenclatural status and the type for each species are also indicated.

This catalog will certainly be the main reference work for all noctuid workers and others who need a reference on the named species of world Noctuidae. It is the first comprehensive world catalog ever produced for the entire family.

**The Potato Beetles, The Genus *Leptinotarsa* in North America (Flora & Fauna Handbook No. 3)**, by Richard L. Jacques, ca. 112 pages, ill., \$14.95. Publication date: April 1988. ISBN 0-916846-40-7.

Species of the genus *Leptinotarsa* (Coleoptera: Chrysomelidae) are well known phytophagous beetles, made infamous by the nearly worldwide pest, the Colorado Potato Beetle. Although some species are restricted in their feeding to members of the plant family Solanaceae, others feed on species of other plant families. The interrelationship of these species is discussed in detail. The author has reviewed all of the North American species of the genus, and includes keys to the genera of the tribe to which *Leptinotarsa* belong. A key to the species found in Canada, the United States, and Mexico, is supported by descriptions and illustrations (some in full color) of each species found in the region. Distribution data and maps complete this section. A considerable amount of host plant data is presented and the life history of many species is given. The work includes a completely up-to-date review of recent literature on the subject, and a useful bibliography. Introductory chapters give the history of the Colorado Potato Beetle as a pest and discuss host plant relationships. Several of the common host plants are described and illustrated. This book will serve as a guide for all of those interested in host plant biology, as well as an identification manual for those interested in the group.

**Catalog of the Heteroptera, or True Bugs, of Canada & the Continental United States**, edited by Thomas J. Henry & Richard C. Froeschner. ca. 880 pages, \$58.50 (cloth). Publication date: May, 1988. ISBN 0-916846-44-X.

This is the first catalog of all the North American bugs since the Van Duzee (1917) *Catalogue of the Hemiptera of America north of Mexico*. It treats all 3,834 species in the 45 families known to occur in the area covered which is an increase of 2,209 species since Van Duzee's standard work.

The introduction contains a brief historical review of the Heteroptera workers, mention of a few of the larger, more comprehensive treatments of bugs, discusses the unsettled question of what order name to use (Hemiptera or Heteroptera), gives an outline of the families of Heteroptera of the world, and provides a table with a breakdown of the number of bug species by family. Each of the 45 families begins with a brief introduction that includes a short description of the group, their general habits, and the major literature pertaining to it. This is followed by the catalog of species and higher categories.

Under each species is cited the original description and type locality, all generic combinations and synonyms mentioned in the North American literature, and a list of misspellings and misidentifications. The distribution of each species by state or province is followed by a summary of the localities outside of North America where the species occurs.

The catalog is designed for easy use of specialists and non-specialists alike, and therefore will be useful to all entomologists, and any biologist concerned with the names and literature on the bugs, as many of these are of great economic and scientific importance. Because of the numerous references, the book will be needed by all entomological institutions and libraries.

New Publications from  
**E.J. Brill / Flora & Fauna Publications**  
LEIDEN • NEW YORK • KØBENHAVN • KÖLN

E.J. Brill / Flora & Fauna Publications is always interested in considering for publication new scholarly works on all aspects of entomology, botany, and zoology. Dr. Ross H. Arnett, Jr., our acquisitions editor, will be glad to hear from you if you are considering submitting a manuscript to Brill.

Our editorial address is: E.J. Brill / Flora & Fauna Publications, P.O. Box 1702-100, Gainesville, FL 32606. Telephone: (904) 371-9858.

For all your orders and for information regarding our publications, please contact our office in New York: W.S. Heinman, Inc. / E.J. Brill (USA) Inc., 1780 Broadway, Suite 1004, New York, NY 10019. Telephone: (212) 757-7628.

**Checklist of the Beetles of North and Central America and the West Indies** / Compiled and edited by Ross H. Arnett, Jr.; (10 volumes in looseleaf binder). The checklist includes all known species of beetles found in Canada, the United States, Mexico, Central America through Panama and the West Indies. Families, subfamilies, tribes, genera and species are listed. Generic and specific synonyms are included. The distribution of each species is given by states for the United States of America and Mexico, by province for Canada, and by country for the remainder of the area. Bibliographic references for each genus and species is made by giving the author's last names, the year of the publication and the page number. These may then be found in Volume 10, the bibliography. Each family section can be revised and (re)issued in up-to-date form.

**Introduction (second series):** The Introduction describes in detail the way to use the "Checklist" and gives a complete list of the beetle families of the world arranged phylogenetically with an index to the family names and the common names. 26 pages, with 3 post binder, \$15.00.  
ISBN 0-916846-29-6.

**Volume 1** / *The Ground Beetles, Water Beetles, and Related Groups*. 135 pages, \$15.00.  
ISBN 0-916846-12-1.

**Volume 2** / *The Rove Beetles and Related Groups*. 256 pages, \$28.00. ISBN 0-916846-13-X.

**Volume 3** / *The Scarab Beetles, Buprestid Beetles, and Related Groups*. 254 pages, \$27.00.  
ISBN 0-916846-14-8.

**Volume 4** / *The Click Beetles, Fireflies, Checkered Beetles, and Related Groups*. 214 pages, \$23.00.  
ISBN 0-916846-17-2.

**Volume 5** / *The Ladybird Beetles and Related Groups*. 132 pages, \$15.00. ISBN 0-916846-18-0.

**Volume 6** / *The Darkling Beetles, Strepsiptera, and Related Groups*. 224 pages, \$24.00.  
ISBN 0-916846-19-9.

**Volume 8** / *The Leaf Beetles and the Bean Weevils*. 176 pages, \$20.00. ISBN 0-916846-20-2.

**Volume 9** / *The Fungus Weevils, Bark Beetles, Weevils, and Related Groups*. 338 pages, \$40.00.  
ISBN 0-916846-21-0.

**Volume 10** / *Bibliography of the Coleoptera of North America north of Mexico, 1758-1948 and supplements*. 240 pages, \$25.00. ISBN 0-916846-07-5.

**Complete set, including binders, 2,137 pages, \$250.00. ISBN 0-916846-26-1.**

**Advances in Myrmecology**, edited by James C. Trager, ca. 520 pages, ill., \$45.00. Publication date: June, 1988. ISBN 0-916846-38-5. Many of the currently active research workers on ants have contributed to this volume (54 contributors in 36 articles), which brings up-to-date aspects of the systematics, distribution, ecology, behavior, genetics, physiology and biochemistry of the ants. The volume is divided into six sections: Ant Systematics, Genetics and Evolution, Ecology and Behavior, Biochemistry and Physiology, Development, and Predators and Parasites. Each section contains original research articles as well as summaries of the current status of many subjects.

This book will serve as a guide for all of those interested in host plant biology, as well as an identification manual for those interested in the group.

**Catalog of the Heteroptera, or True Bugs, of Canada & the Continental United States**, edited by Thomas J. Henry & Richard C. Froeschner. ca. 880 pages, \$58.50 (cloth). Publication date: May, 1988. ISBN 0-916846-44-X.

This is the first catalog of all the North American bugs since the Van Duzee (1917) *Catalogue of the Hemiptera of America north of Mexico*. It treats all 3,834 species in the 45 families known to occur in the area covered which is an increase of 2,209 species since Van Duzee's standard work.

The introduction contains a brief historical review of the Heteroptera workers, mention of a few of the larger, more comprehensive treatments of bugs, discusses the unsettled question of what order name to use (Hemiptera or Heteroptera), gives an outline of the families of Heteroptera of the world, and provides a table with a breakdown of the number of bug species by family. Each of the 45 families begins with a brief introduction that includes a short description of the group, their general habits, and the major literature pertaining to it. This is followed by the catalog of species and higher categories.

Under each species is cited the original description and type locality, all generic combinations and synonyms mentioned in the North American literature, and a list of misspellings and misidentifications. The distribution of each species by state or province is followed by a summary of the localities outside of North America where the species occurs.

The catalog is designed for easy use of specialists and non-specialists alike, and therefore will be useful to all entomologists, and any biologist concerned with the names and literature on the bugs, as many of these are of great economic and scientific importance. Because of the numerous references, the book will be needed by all entomological institutions and libraries.

# INSECTA MUNDI

Journal of World Insect Systematics

## EDITORIAL BOARD

M.C. Thomas, Editor  
Ross H. Arnett, Jr.  
Virendra Gupta  
John B. Heppner  
Lionel L. Stange  
Robert E. Woodruff

**INSECTA MUNDI** (ISSN 0749-6737) is the quarterly journal of The Center for Insect Systematics. Short papers on broadly defined insect systematics are published, including descriptions of new taxa, informal taxonomic notes, bibliographies, checklists, catalogs, and reviews.

For papers about new insect species, **INSECTA MUNDI** provides authors **early publication** so that the species may be included in other books and catalogs.

Authors are fully responsible for the contents of their papers. All papers are reviewed by the Editorial Board and by individuals with special expertise. Acceptance by a majority of the Editorial Board is a requirement for publication.

Research notices and other noncommercial news is published at the discretion of the Editorial Board. New literature reviews are also published.

**INSECTA MUNDI** is distributed worldwide to entomology libraries and publishing taxonomists.

Announcements and advertisements are accepted; rates upon request.

## SUBSCRIPTIONS (four issues per year)

Individuals: \$30.00 per year plus \$8.50 postage

Libraries: \$60.00 per year plus \$8.50 postage

Send subscription orders to:

E. J. Brill-USA, Inc.

P.O. Box 467

Kinderhook, NY 12106 USA

Indicate whether subscription is to be by volume or to be automatically renewed. Do not pay in advance; an invoice will follow.

## MANUSCRIPTS

Send unpublished manuscripts and queries to:

M.C. Thomas, Editor

**INSECTA MUNDI**

c/o Florida State Collection of Arthropods

P.O. Box 1269

Gainesville, FL 32602 USA

Notice of acceptance/rejection within two weeks. Include (U.S.) postage if you want your manuscript returned.

No page charges are made. However, authors are required to subscribe. Separates can be ordered upon acceptance, at Publisher's cost.

## INSTRUCTIONS TO AUTHORS

### General

1. All papers must adhere to The International Rules of Zoological Nomenclature.

2. Papers longer than 25 pages will be published in segments in two or more **INSECTA MUNDI** issues.
3. Papers may be in English, French, German, Italian, Portuguese, or Spanish. An English summary is required for non-English papers.
4. Publisher will design, typeset, and assemble text and artwork for publication.

### Content

5. Each new taxon must be illustrated and included in a new key, or as an addendum to an existing key. The only exceptions to this rule are:
  - A. the publication of a replacement name for a homonym,
  - B. for a new combination of a species or subspecies.
6. Type species of each genus must be stated, with the manner of designation and reference to the designation.
7. Start your paper with an **Abstract** defining your conclusion. Follow with an **Introduction** that describes the scope and purpose (not a summary) of your paper.
8. **Distribution** data may be summarized. For new taxa or comprehensive species studies, full data from labels may be given. Include the names of collections in which the specimens are deposited.
9. List references under **Literature Cited**; follow the format shown in this issue.
10. Footnotes are prohibited; use Text Notes at the end of your paper. Provide a separate sheet/file with captions and legends for photos, tables and artwork.

### Materials

11. **Text:** The Publisher uses MS-DOS personal computers to prepare each issue. When possible, supply your paper on (U.S.A.) MS-DOS 360K 5-1/4" diskettes and a (final) hardcopy printout.

Acceptable word-processor or ASCII formats for italic and foreign characters (â, à, á, â, etc.) are explained in our (easy-to-use) **Instructions for Computer Generated Papers**. Ask for it.

Other formats and non-computer generated (typewritten) papers will be converted and charged to author at cost.

12. **Photos, Tables and Artwork:** Add numbers to front of plates, photos and artwork. Use scale lines. Add captions and legends to backside. Do not intermix photos and art on same plate. Photos extra: \$10 each. Color available at extra cost. Photos and art will be returned upon publication.

	Max.	Max.

2 Columns	6-3/4"	8-1/4"

E. J. BRILL

LEIDEN • NEW YORK • KØBENHAVEN • KÖLN

New Publications from  
**E.J. Brill / Flora & Fauna Publications**  
LEIDEN • NEW YORK • KØBENHAVN • KÖLN

E.J. Brill / Flora & Fauna Publications is always interested in considering for publication new scholarly works on all aspects of entomology, botany, and zoology. Dr. Ross H. Arnett, Jr., our acquisitions editor, will be glad to hear from you if you are considering submitting a manuscript to Brill.

Our editorial address is: E.J. Brill / Flora & Fauna Publications, P.O. Box 1702-100, Gainesville, FL 32606. Telephone: (904) 371-9858.

For all your orders and for information regarding our publications, please contact our office in New York: W.S. Heinman, Inc. / E.J. Brill (USA) Inc., 1780 Broadway, Suite 1004, New York, NY 10019. Telephone: (212) 757-7628.

**Checklist of the Beetles of North and Central America and the West Indies** / Compiled and edited by Ross H. Arnett, Jr.; (10 volumes in looseleaf binder). The checklist includes all known species of beetles found in Canada, the United States, Mexico, Central America through Panama and the West Indies. Families, subfamilies, tribes, genera and species are listed. Generic and specific synonyms are included. The distribution of each species is given by states for the United States of America and Mexico, by province for Canada, and by country for the remainder of the area. Bibliographic references for each genus and species is made by giving the author's last names, the year of the publication and the page number. These may then be found in Volume 10, the bibliography. Each family section can be revised and (re)issued in up-to-date form.

**Introduction (second series):** The Introduction describes in detail the way to use the "Checklist" and gives a complete list of the beetle families of the world arranged phylogenetically with an index to the family names and the common names. 26 pages, with 3 post binder, \$15.00. ISBN 0-916846-29-6.

**Volume 1** / *The Ground Beetles, Water Beetles, and Related Groups*. 135 pages, \$15.00. ISBN 0-916846-12-1.

**Volume 2** / *The Rove Beetles and Related Groups*. 256 pages, \$28.00. ISBN 0-916846-13-X.

**Volume 3** / *The Scarab Beetles, Buprestid Beetles, and Related Groups*. 254 pages, \$27.00. ISBN 0-916846-14-8.

**Volume 4** / *The Click Beetles, Fireflies, Checkered Beetles, and Related Groups*. 214 pages, \$23.00. ISBN 0-916846-17-2.

**Volume 5** / *The Ladybird Beetles and Related Groups*. 132 pages, \$15.00. ISBN 0-916846-18-0.

**Volume 6** / *The Darkling Beetles, Strepsiptera, and Related Groups*. 224 pages, \$24.00. ISBN 0-916846-19-9.

**Volume 7** / *The Longhorned Beetles*. 138 pages, \$18.00. ISBN 0-937548-04-9.

**Volume 8** / *The Leaf Beetles and the Bean Weevils*. 176 pages, \$20.00. ISBN 0-916846-20-2.

**Volume 9** / *The Fungus Weevils, Bark Beetles, Weevils, and Related Groups*. 338 pages, \$40.00. ISBN 0-916846-21-0.

**Volume 10** / *Bibliography of the Coleoptera of North America north of Mexico, 1758-1948 and supplements*. 240 pages, \$25.00. ISBN 0-916846-07-5.

**Complete set, including binders, 2,137 pages, \$250.00. ISBN 0-916846-26-1.**

**Advances in Myrmecology**, edited by James C. Trager, ca. 520 pages, ill., \$45.00. Publication date: June, 1988. ISBN 0-916846-38-5. Many of the currently active research workers on ants have contributed to this volume (54 contributors in 36 articles), which brings up-to-date aspects of the systematics, distribution, ecology, behavior, genetics, physiology and biochemistry of the ants. The volume is divided into six sections: Ant Systematics, Genetics and Evolution, Ecology and Behavior, Biochemistry and Physiology, Development, and Predators and Parasites. Each section contains original research articles as well as summaries of the current status of many subjects.
