White-winged Crossbill: The remarkable winter influx persisted into the summer period, with one seen in Omaha--the last at the observer's feeders--on 1 June (NR), and a female identified as late as 20 June at a Bassett feeder where none had showed since 9 June (CH). These sightings signify record late spring dates (although there are a few isolated summer records); both locations had hosted significant wintering flocks.

Pine Siskin: Routine reports.

American Goldfinch: Routine reports.

House Sparrow: Routine reports.
